

# Contents

<b>1</b>	<b>Introduction . . . . .</b>	<b>1</b>
1.1	Superconducting Phenomena . . . . .	1
1.2	Kinds of Superconductors . . . . .	3
1.3	London Theory . . . . .	5
1.4	Ginzburg-Landau Theory . . . . .	8
1.5	Magnetic Properties . . . . .	15
1.5.1	Quantization of Magnetic Flux . . . . .	16
1.5.2	Vicinity of Lower Critical Field . . . . .	17
1.5.3	Vicinity of Upper Critical Field . . . . .	23
1.6	Surface Superconductivity . . . . .	29
1.7	Josephson Effect . . . . .	31
1.8	Critical Current Density . . . . .	33
1.9	Flux Pinning Effect . . . . .	36
1.10	Exercises . . . . .	37
	References . . . . .	38
<b>2</b>	<b>Fundamental Electromagnetic Phenomena in Superconductors . .</b>	<b>39</b>
2.1	Equations of Electromagnetism . . . . .	39
2.2	Flux Flow . . . . .	43
2.3	Mechanism of Hysteresis Loss . . . . .	48
2.4	Characteristic of the Critical State Model and Its Applicable Range . . . . .	52
2.5	Irreversible Phenomena . . . . .	53
2.6	Effect of Diamagnetism . . . . .	62
2.7	AC Losses . . . . .	70
2.8	Exercises . . . . .	75
	References . . . . .	76
<b>3</b>	<b>Various Electromagnetic Phenomena . . . . .</b>	<b>77</b>
3.1	Geometrical Effect . . . . .	77
3.1.1	Loss in Superconducting Wire due to AC Current . . . . .	77

3.1.2	Loss in Superconducting Wire of Ellipsoidal Cross Section and Thin Strip due to AC Current . . . . .	80
3.1.3	Transverse Magnetic Field . . . . .	81
3.1.4	Rotating Magnetic Field . . . . .	84
3.1.5	AC Loss in a Thin Superconducting Strip in Normal Magnetic Field . . . . .	85
3.2	Dynamic Phenomena . . . . .	86
3.3	Superposition of AC Magnetic Field . . . . .	89
3.3.1	Rectifying Effect . . . . .	89
3.3.2	Reversible Magnetization . . . . .	92
3.3.3	Abnormal Transverse Magnetic Field Effect . . . . .	93
3.4	Flux Jump . . . . .	95
3.5	Surface Irreversibility . . . . .	98
3.6	DC Susceptibility . . . . .	108
3.7	Reversible Flux Motion . . . . .	114
3.8	Flux Creep . . . . .	125
3.9	Exercises . . . . .	136
	References . . . . .	137
<b>4</b>	<b>Longitudinal Magnetic Field Effect . . . . .</b>	<b>139</b>
4.1	Outline of Longitudinal Magnetic Field Effect . . . . .	139
4.2	Flux-Cutting Model . . . . .	144
4.3	Stability of the Force-Free State . . . . .	151
4.4	Motion of Flux Lines . . . . .	157
4.5	Critical Current Density . . . . .	167
4.6	Generalized Critical State Model . . . . .	171
4.7	Resistive State . . . . .	174
4.8	Exercises . . . . .	185
	References . . . . .	186
<b>5</b>	<b>Measurement Methods for Critical Current Density . . . . .</b>	<b>189</b>
5.1	Four Terminal Method . . . . .	189
5.2	DC Magnetization Method . . . . .	192
5.3	Campbell's Method . . . . .	193
5.4	Other AC Inductive Methods . . . . .	200
5.4.1	Third Harmonic Analysis . . . . .	200
5.4.2	AC Susceptibility Measurement . . . . .	203
5.5	Exercises . . . . .	209
	References . . . . .	209
<b>6</b>	<b>Flux Pinning Mechanisms . . . . .</b>	<b>211</b>
6.1	Elementary Pinning and the Summation Problem . . . . .	211
6.2	Elementary Pinning Force . . . . .	212
6.3	Condensation Energy Interaction . . . . .	214
6.3.1	Normal Precipitates . . . . .	215
6.3.2	Grain Boundary . . . . .	221

6.4	Elastic Interaction . . . . .	229
6.5	Magnetic Interaction . . . . .	234
6.6	Kinetic Energy Interaction . . . . .	234
6.7	Improvement of Pinning Characteristics . . . . .	236
6.8	Exercises . . . . .	238
	References . . . . .	239
<b>7</b>	<b>Flux Pinning Characteristics . . . . .</b>	<b>241</b>
7.1	Flux Pinning Characteristics . . . . .	241
7.2	Elastic Moduli of Flux Line Lattice . . . . .	244
7.3	Summation Problem . . . . .	248
7.3.1	Statistical Theory . . . . .	249
7.3.2	Dynamic Theory . . . . .	256
7.3.3	Larkin-Ovchinnikov Theory . . . . .	260
7.3.4	Coherent Potential Approximation Theory . . . . .	265
7.4	Comparison with Experiments . . . . .	270
7.4.1	Qualitative Comparison . . . . .	270
7.4.2	Quantitative Comparison . . . . .	278
7.4.3	Problems in Summation Theories . . . . .	279
7.5	Saturation Phenomenon . . . . .	282
7.5.1	Saturation and Nonsaturation . . . . .	282
7.5.2	The Kramer Model . . . . .	284
7.5.3	Model of Evetts et al. . . . .	286
7.5.4	Comparison Between Models and Experiments . . . . .	287
7.5.5	Avalanching Flux Flow Model . . . . .	290
7.6	Peak Effect and Related Phenomena . . . . .	292
7.7	Pinning Potential Energy . . . . .	301
7.8	Exercises . . . . .	304
	References . . . . .	305
<b>8</b>	<b>High-Temperature Superconductors . . . . .</b>	<b>309</b>
8.1	Anisotropy of Superconductors . . . . .	309
8.2	Phase Diagram of Flux Lines . . . . .	313
8.2.1	Melting Transition . . . . .	313
8.2.2	Vortex Glass-Liquid Transition . . . . .	314
8.2.3	Order-Disorder Transition . . . . .	319
8.2.4	Phase Diagram of Flux Lines in Each Superconductor . . . . .	323
8.2.5	Size Effect . . . . .	325
8.2.6	Other Theoretical Predictions . . . . .	326
8.3	Weak Links of Grain Boundaries . . . . .	327
8.4	Electromagnetic Properties . . . . .	330
8.4.1	Anisotropy . . . . .	330
8.4.2	Differences in the Size Effect due to the Dimensionality . . . . .	331
8.4.3	Flux Creep . . . . .	336
8.4.4	$E$ - $J$ Curve . . . . .	338

8.4.5	Josephson Plasma . . . . .	341
8.5	Irreversibility Field . . . . .	343
8.5.1	Analytic Solution of Irreversibility Field . . . . .	343
8.5.2	Effect of Distribution of Pinning Strength . . . . .	344
8.5.3	Comparison with Flux Creep-Flow Model . . . . .	346
8.5.4	Relation with G-L Transition . . . . .	354
8.6	Flux Pinning Properties . . . . .	355
8.6.1	RE-123 . . . . .	356
8.6.2	Bi-2223 . . . . .	366
8.6.3	Bi-2212 . . . . .	369
8.7	Exercises . . . . .	371
	References . . . . .	372
<b>9</b>	<b>MgB<sub>2</sub></b> . . . . .	377
9.1	Superconducting Properties . . . . .	377
9.2	Critical Current Properties . . . . .	379
9.2.1	Wires and Bulk Materials . . . . .	379
9.2.2	Thin Films . . . . .	389
9.3	Flux Pinning Properties . . . . .	391
9.3.1	Pinning Property in the Low Field Region . . . . .	392
9.3.2	Pinning Properties in the High Magnetic Field Region . . . . .	396
9.4	Exercises . . . . .	401
	References . . . . .	402
	<b>Appendix</b> . . . . .	405
A.1	Description of Equilibrium State . . . . .	405
A.2	Critical State Theory . . . . .	407
A.3	Magnetic Properties of a Small Superconductor . . . . .	411
A.4	Minimization of Energy Dissipation . . . . .	413
A.5	Partition of Pinning Energy . . . . .	414
A.6	Comments on the Nonlocal Theory of the Elasticity of the Flux Line Lattice . . . . .	415
A.7	Avalanching Flux Flow Model . . . . .	421
A.8	Josephson Penetration Depth . . . . .	424
A.9	On the Transverse Flux Bundle Size . . . . .	425
	References . . . . .	434
	<b>Answers to Exercises</b> . . . . .	437
	Chapter 1 . . . . .	437
	Chapter 2 . . . . .	441
	Chapter 3 . . . . .	447
	Chapter 4 . . . . .	454
	Chapter 5 . . . . .	458
	Chapter 6 . . . . .	459
	Chapter 7 . . . . .	461
	Chapter 8 . . . . .	467

Contents	xv
Chapter 9 . . . . .	469
