Part I Introduction

1	Requirements for Monitoring, Control and Operation	3
	Christian Rehtanz, Nikolai Voropai and Ulf Häger	
1.1	Introduction	3
1.2	Large-Scale Interconnected Power Systems	5
1.2.1	General Characteristics of IPS/UPS	5
1.2.2	ENTSO-E CE	8
1.2.3	Interface Tie Lines Between ENTSO-E and IPS/UPS	9
1.3	Requirements and Innovation for Future Interconnected Power Systems	10
1.3.1	Concept of Optimal Interconnection of Large-Scale Power Systems	12
1.3.2	State Estimation of Large-Scale Interconnected Systems	13
1.3.3	Protection Functions Securing Stable Operation of Interconnected Networks	15
1.4	Structure of the Book	16
	References	17

Part II System Model and Dynamic Phenomena

2	Load Flow and Dynamic Model	21
	André Seack, Johannes Schwippe, Ulf Häger and Daniil Panasetzky	
2.1	Introduction	21
2.2	Aggregated Network Model	21
2.2.1	Aggregation of Detailed Network Nodes	22
2.2.2	Aggregation of Transmission Lines	24
2.2.3	Allocation of Load and Generation	27
2.2.4	Unit Commitment	28
2.2.5	Dynamic Model	29

2.3	Validation of the Network Model	30
2.4	Conclusions	32
	References	32
3	Power System Dynamic Phenomena	35
	Enrico Gaglioti and Adriano Iaria	
3.1	Introduction	35
3.2	Classification	36
3.3	Main Concerns for Large Interconnected Power Systems	37
3.4	Relevant Parameters for Transient and Small Signal Stability.	38
3.5	Assessment Methods	41
3.6	Improvement Methods	42
	References	50
 Part III Monitoring of Interconnected Power Systems		
4	Monitoring Technologies	53
	Kay Görner, Ettore Bompard, Tao Huang and Michael Kleemann	
4.1	Introduction	53
4.2	Communication Exchange Over TSO Interconnections	54
4.3	Hierarchy of Control Centers in Power Systems	55
4.4	Data Communication Network	57
4.4.1	Communication Network in Control Centers	57
4.4.2	Communication Between Data Acquisition Units in Substations and Control Centers	58
4.4.3	Protocols	59
4.4.4	Peer to Peer Communications for Data Transmission Optimization	61
4.5	Comparison of Local Protection Devices, Wide Area Monitoring System and SCADA/EMS for Detection of Power System States	61
4.6	Conclusions	63
	References	64
5	Wide Area Monitoring System	65
	Tadeja Babnik, Kay Görner and Bojan Mahkovec	
5.1	Introduction	65
5.2	WAMS Overview	66
5.2.1	Large Scale WAMS Concept	68
5.3	Phasor Measurement Units	69

5.4	Phasor Data Concentrator	70
5.4.1	Real-Time Data Exchange Requirements	70
5.4.2	Detection and Protection Functions	71
5.4.3	Data Storage	73
5.4.4	Data Visualization	74
5.5	WAMS Experiences	74
5.5.1	Example 1: Un-Damped Low-Frequency Oscillation	77
5.5.2	Example 2: Recording of Synchronization of Turkish Power System with the Interconnected Power Systems of Continental Europe	79
5.5.3	Example 3: Hydro Power Plant Outage in Turkey . . .	81
5.6	Conclusions	82
	References	82
6	Distributed State Estimation	83
	Irina Kolosok, Elena Korkina and Oleg Soukhanov	
6.1	Introduction	83
6.2	State Estimation with Phasor Measurement Units	84
6.3	The EPS State Estimation Problem and Solution Methods Based on Test Equations	85
6.3.1	Decomposition Methods for State Estimation of Large-Scale Power Systems	87
6.3.2	Decomposition of the SE Problem with the Test Equations Method and PMU Data	88
6.3.3	Calculation Example	93
6.4	Distributed Hierarchical SE of Large Power Systems on Basis of the Functional Modeling Method	95
6.4.1	Description of Distributed Hierarchical FM Algorithm	96
6.4.2	Solution Methods	100
6.4.3	Illustrative Example	101
6.5	Outlook and Conclusions	104
	References	105
7	Dynamic State Estimation	107
	Anna Glazunova	
7.1	Introduction	107
7.2	Background Information	108
7.3	Modeling	108
7.3.1	Dynamic Model	108
7.3.2	Model of Measurement Data	109
7.3.3	Kalman Filter	109
7.3.4	Objective Function of Dynamic State Estimation	110

7.4	Applications of Dynamic State Estimation	111
7.4.1	Filtering of Random Measurement Errors	111
7.4.2	Forecasting	114
7.5	Numerical Results	116
7.5.1	Test System	116
7.5.2	Database Creation	116
7.5.3	Kalman Filter Tuning	117
7.5.4	Filtering of Random Errors	118
7.5.5	Forecasting the State Vector Components	119
7.6	Conclusions	123
	References	123
8	Inter-TSO Solutions for Monitoring and State Estimation	125
	Anna Mutule, Karlis Brinkis, Oleg Kochukov and Kay Görner	
8.1	Introduction	125
8.2	Test Case for Inter-TSO Network Monitoring and State Estimation	126
8.2.1	Selection Reason of the 330 and 750 kV Electrical Ring Network	126
8.2.2	Modeling Scheme of the Baltic Electrical Ring	127
8.2.3	Analysis of Interconnection Points in Electrical Ring	129
8.3	Prototype of State Estimation	130
8.3.1	Prototype Description	130
8.3.2	Distributed State Estimation	131
8.3.3	Dynamic State Estimation	132
8.4	Testing the Efficiency of the Suggested Algorithm for Distributed State Estimation	133
8.4.1	Testing of Simulator Efficiency	134
8.4.2	Comparison of Calculated Power Flow and Voltage Values in OTSENKA Software with SCADA Measurements in Electrical Ring	134
8.5	Conclusions	138
	References	139

Part IV Control of Interconnected Power Systems

9	Technologies for the Control of Interconnected Power Systems	143
	Angelo L'Abbate and Ulf Häger	
9.1	Introduction	143
9.2	Control Technologies: PSTs	144

9.3	Control Technologies: FACTS	146
9.3.1	Shunt Controllers	149
9.3.2	Series Controllers	152
9.3.3	Combined Controllers	154
9.4	Control Technologies: HVDC	158
9.5	Reliability and Availability of FACTS and HVDC	165
9.6	Conclusions	167
	References	167
10	Coordinated Power Flow Control	171
	Ulf Häger	
10.1	Introduction	171
10.2	Multi-agent System Structure for Distributed Coordination of PFC	172
10.2.1	Communication Model	173
10.2.2	Principle Communication Among Agents	173
10.2.3	Communication Rules	175
10.2.4	Assigning the Sensitivity	175
10.2.5	Assigning the Direction of Impact	177
10.2.6	Distributed Coordination	178
10.2.7	Control of PFCs	178
10.3	Comparison Between OPF and Agents Coordination	179
10.3.1	PST Devices in the New England Test System	179
10.3.2	Test Case Scenarios	180
10.3.3	Reference Method	181
10.3.4	Results Evaluation	182
10.3.5	Conclusions	185
10.4	Large Scale Interconnection	186
10.4.1	Requirements for the Communication System	188
10.4.2	Simulation Scenario with PST	189
10.4.3	Simulation Scenario with TCPAR	191
10.5	Summary and Conclusions	191
	References	192
11	Control of Interconnected Networks	195
