1	Introduction	1
1.1	Registration in pulmonary image analysis	3
1.2	Objectives	5
1.3	Structure of this thesis	6
1.4	Publications	7
2	Current methods for lung registration	9
2.1	Intensity-based registration techniques	10
2.1.1	Transformation models	12
2.1.2	Regularization approaches	13
2.1.3	Distance measures	14
2.1.4	Algorithmic solutions	15
2.2	Open-source implementations	15
2.3	Discussion	16
3	Variational image registration	17
3.1	Image registration as a minimization problem	17
3.1.1	The Euler-Lagrange equation	18
3.1.2	Discretization and stability considerations	20
3.1.3	Multi-scale registration	21
3.2	Distance Measures	22
3.2.1	(Normalized) Sum of Squared Differences	22
3.2.2	Other distance measures	23
3.3	Regularizer	24
3.3.1	Diffusion regularization	24
3.3.1.1	Stability properties of the explicit scheme	25
3.3.1.2	Diffusion regularization with Fast Explicit Diffusion	26
3.3.1.3	Additive Operator Splitting for semi-implicit solution	27
3.3.2	Elastic regularization	28
3.3.2.1	Stability properties of the explicit scheme	28
3.3.2.2	Semi-implicit solution in the frequency domain	29
3.3.3	Gaussian smoothing	30
3.3.4	Other regularization approaches	30
3.4	Diffeomorphic registration	31

3.4.1	Symmetrization of forces	33
3.5	Experiments	33
3.5.1	Comparison of force domains	34
3.5.2	Comparison of regularizers	35
3.5.3	Comparison of solution schemes	35
3.5.4	Comparison of standard and diffeomorphic registration	36
3.6	Discussion	36
4	Variational level set segmentation	39
4.1	Region-based level set segmentation	39
4.1.1	Internal and external energy terms	41
4.1.2	Numerical solution	42
4.1.3	Implementation	43
4.1.4	Experiments	43
4.2	Extended energy terms for problem-specific modeling	44
4.2.1	Prior shape information for segmentation refinement	45
4.2.2	Edge attraction terms	45
4.2.3	Experiments	47
4.3	Level sets with multiple objects	47
4.3.1	Experiments	48
4.4	Discussion	48
5	Lung registration with explicit interlobular fissure alignment	51
5.1	Combining registration and segmentation	53
5.1.1	Current methods for integrated registration and segmentation	53
5.1.2	A variational model for integrated registration and segmentation	54
5.1.3	Numerical solution	56
5.1.4	Experiments	56
5.2	Pulmonary lobe segmentation using level sets	57
5.2.1	Current methods for lung and lobe segmentation	57
5.2.2	Extension of the region-based level set framework for lobe segmentation	59
5.2.2.1	Fissure-attraction term for lobe segmentation	59
5.2.3	Experiments	60
5.3	Integrated registration with pulmonary lobe segmentation	61
5.3.1	Experiments	61
5.4	Discussion	63
6	Sliding motion in image registration	65
6.1	Masked Registration	66
6.2	Direction-Dependent Regularization	67
6.2.1	A direction-dependent regularization model	69

6.2.1.1	Discretization and numerical stability of the DDR scheme	71
6.2.2	DDR with automatic detection of discontinuous motion	73
6.2.3	DDR with multiple objects for modeling lobe sliding	75
6.3	Experiments	76
6.4	Discussion	78
7	Evaluation with clinical image data	79
7.1	Materials and methods	79
7.1.1	Practical aspects of CT imaging	80
7.1.2	Considered image data	82
7.1.3	Metrics for evaluation of segmentation and registration results .	85
7.1.3.1	Metrics for quantifying segmentation accuracy	85
7.1.3.2	Metrics for quantifying registration accuracy	86
7.1.3.3	Assessing statistical significance	88
7.2	Problem-specific composition of algorithms for lung registration	89
7.2.1	Implementation details	89
7.2.1.1	Histogram matching	89
7.2.1.2	Stop criterion	90
7.2.1.3	Parameter optimization for registration	92
7.2.2	Intra-patient registration of 4D images for motion estimation . .	93
7.2.2.1	Study setup	93
7.2.2.2	Results	94
7.2.3	Intra-patient registration: The EMPIRE10 study	97
7.2.3.1	Study setup	97
7.2.3.2	Details of the algorithm	98
7.2.3.3	Results	100
7.2.4	Inter-patient registration for atlas generation	100
7.2.4.1	Study setup	101
7.2.4.2	Bias-free atlas generation	102
7.2.4.3	Results	103
7.2.5	Discussion	103
7.3	Evaluation of lobe segmentation with level sets	104
7.3.1	Estimation of greyvalue distributions	104
7.3.2	Atlas-based initialization of the segmentation	105
7.3.3	Study setup	105
7.3.4	Results	107
7.3.5	Discussion	110
7.4	Evaluation of registration with fissure alignment	111
7.4.1	Study setup	112
7.4.2	Results	112
7.4.3	Discussion	114
7.5	Evaluation of motion estimation with DDR	115

7.5.1	Study setup	116
7.5.2	Results	116
7.5.3	Discussion	122
8	Conclusions	125
8.1	Contributions	125
8.2	Perspectives	128
8.2.1	Optimization of the underlying registration algorithm	128
8.2.2	Improvement of pulmonary fissure alignment	129
8.2.3	Extensions of sliding motion modeling	129
A	On digital images	131
B	Mathematical derivations	133
B.1	Calculus of variations	133
B.1.1	Derivation of the Euler-Lagrange equation	133
B.1.1.1	Multi-dimensional functions	134
B.1.1.2	Functions of several variables	135
B.1.2	Derivation of registration terms	135
B.1.2.1	Sum of Squared Differences	135
B.1.2.2	Diffusion regularization	136
B.1.2.3	Anisotropic diffusion regularization	137
B.1.2.4	Direction-dependent regularization	137
B.1.3	Derivation of segmentation terms	139
B.1.3.1	Internal energy	140
B.1.3.2	External energy	141
B.1.3.3	Prior shape term	141
B.1.3.4	Gradient term	142
B.1.4	Derivation of the terms of the joint framework	142
B.2	Derivation of DDR	143
C	Supplementary results	145
	List of Notations	147
	Bibliography	149

Registration Methods for Pulmonary Image Analysis
Integration of Morphological and Physiological
Knowledge

Schmidt-Richberg, A.

2014, XVI, 168 p. 48 illus., 14 illus. in color., Softcover

ISBN: 978-3-658-01661-6
