

Contents

1	Outline	1
2	Introduction to Supply Chain Management	5
2.1	Historical background and general motivation	5
2.2	Basic definitions	9
2.2.1	The inter-organizational perspective	10
2.2.2	The intra-organizational perspective	13
3	Supply Chain Scheduling: Integrated machine scheduling and vehicle routing	17
3.1	Motivation	17
3.2	Literature survey	19
3.3	Mixed integer linear programs	23
3.3.1	Parallel machine scheduling	24
3.3.2	Vehicle routing with time windows	26
3.3.3	Integrated machine scheduling and vehicle routing	30
3.4	Generation of test instances	31
3.5	Heuristics	34
3.5.1	Decomposition approaches	34
3.5.2	Genetic algorithm approach	36
3.6	Computational results	42
3.6.1	Small-size instances	42
3.6.2	Large-size instances	45
3.7	Summary and outlook	51

4 Supply Chain Scheduling: Cost-cutting potential	53
4.1 Motivation	53
4.2 Literature survey	56
4.3 Mixed integer linear programs	59
4.3.1 Integrated machine and delivery scheduling	59
4.3.2 Supply Chain Scheduling	63
4.4 Design of the numerical study	67
4.4.1 The separate scheduling scenario	67
4.4.2 The Supply Chain Scheduling scenario	70
4.5 Generation of test instances	72
4.6 Applying Excel to scheduling problems	75
4.6.1 Minimizing total tardiness on parallel machines	76
4.6.2 Integrated machine and delivery scheduling	79
4.6.3 Supply Chain Scheduling	82
4.7 Computational results	82
4.7.1 Small-size instances	82
4.7.2 Large-size instances	87
4.8 Summary and outlook	90
4.9 Appendix. Cost sharing mechanism	92
 5 Supply Chain Scheduling: Makespan reduction potential	 97
5.1 Motivation and literature survey	97
5.2 Mixed integer linear program	100
5.3 Design of the numerical studies	103
5.3.1 Four-stage supply chain environment	103
5.3.2 Two-stage supply chain environment	106
5.4 Computational results	107
5.4.1 Small-size instances	107
5.4.2 Large-size instances	112
5.5 Summary and Outlook	112

6	Supply Chain Contracting: R&D Investment sharing contracts	115
6.1	Motivation	115
6.2	Literature survey	117
6.3	Basic model	118
6.3.1	In-house production scenario	119
6.3.2	External procurement scenario	121
6.3.3	Central control benchmark scenario	125
6.4	R&D investment sharing contracts	129
6.4.1	In-house production threat point	130
6.4.2	External procurement threat point	134
6.4.3	External procurement or discontinuing threat point	136
6.5	Numerical robustness evaluation	138
6.6	Summary and outlook	143
6.7	Appendix	145
6.7.1	Proofs	145
6.7.2	Common contract types	151
7	Concluding remarks	155
	Bibliography	159

Issues in Supply Chain Scheduling and Contracting

Ullrich, C.A.

2014, XXVII, 182 p. 38 illus., Softcover

ISBN: 978-3-658-03768-0
