

Acknowledgements

The way to a Ph.D. is long and stony. Without the help of many supportive and benevolent people I would not have been able to complete it.

I am very grateful for all the interesting and exciting discussions with my interview partners in South Africa and Malaysia. Many of them extended their time limit generously in order to respond to my questions properly. Their analytical perspicacity and strong identification with their goals formed the evaluation of the dissertation to a great extent and were my inspiration and motivation. As long as there are so many dynamic and convincing persons struggling for democratic values I am optimistic for the countries' ways to democracy.

I'd like to give many thanks to the Centre for Development Research (ZEF) in Bonn, Germany. It supported my thesis financially with more than initial funding. Additionally, I took part in the international doctoral program of the research centre. This offered the opportunity to get to know junior researchers from all over the world. Particularly the fruitful and inspiring discussions in the research meetings provided me with new ideas for my own research design and with a different look on development issues in general.

When the idea to write a Ph.D. came up, I approached Professor Siegmund Schmidt, a German expert on African politics. He encouraged me to take up this project and became my first supervisor. His deep insights into South African politics and society and his valuable comments on my research design and methodology enriched the thesis strongly. For his infinite patience and strong belief in me I am more than thankful. Although I approached Professor Claudia Derichs, expert on Southeast Asia, at a very late stage of the thesis she accepted to be the second supervisor for what I was very glad.
