
Contents

Foreword	V
1. Introduction	1
1.1. Research topic and its relevance	1
1.2. Research question(s)	2
1.3. Research methods/approach	2
1.4. Thesis Structure	2
2. Foundations of Mathematical Finance and Stochastic Calculus	5
2.1. Interest Rates and Derivatives	5
2.2. Stochastic Calculus and No-Arbitrage Pricing	11
2.3. Monte Carlo Simulation and Computational Aspects	16
2.3.1. Monte Carlo Methods	17
2.3.2. Random Numbers	17
2.3.3. Quasi-random numbers and Antithetics	19
3. The Libor Market Model	21
3.1. Libor Market Model	21
3.2. Sensitivities (Greeks) in the Libor Market Model	23
3.3. Term Structure Interpolation Method	25
4. Volatility and Correlation in the Libor Market Model	31
4.1. Model Volatility Calibration	31
4.2. Model Correlation Calibration	34
4.3. Factor Reduction	35
5. Applications and Results	39
5.1. Parameterization and Calibration Results	39
5.1.1. Calibration to cap volatilities	39
5.1.2. Calibration to swaption volatilities	42

5.2. Pricing Application	43
5.2.1. Caps	43
5.2.2. Swaptions	44
5.3. Sensitivities	47
5.4. Validation	49
5.4.1. Validation of cap pricing	49
5.4.2. Validation of swaption pricing	50
5.4.3. Convergence Speed	52
6. Conclusion	55
7. Bibliography	57
A. Appendix: Proofs	59
B. Appendix: Graphs	63

Calibration and Parameterization Methods for the Libor
Market Model

Hackl, C.

2014, IX, 64 p. 27 illus., Softcover

ISBN: 978-3-658-04687-3
