

Acknowledgments

I would like to thank the people and institutions that have supported me during the process of writing this book.

First and foremost, I would like to thank Professor Jürgen Schupp and Professor Gert G. Wagner for supervising my thesis project. I am grateful for their numerous suggestions, encouraging feedback, and the stimulating discussions we shared each step of the way in developing and working on this thesis.

Second, I would like to express my gratitude to the International Max Planck Research School on the Life Course (LIFE) and the German Institute for Economic Research (DIW Berlin). The International Max Planck Research School on the Life Course provided me with the financial means to work on this thesis, funded international and interdisciplinary collaborations and workshops, and offered a very stimulating research environment for me to work in. I also owe much gratitude to the German Institute for Economic Research and to the SOEP Department in particular. I would like to reiterate my thanks to Professor Gert G. Wagner and Professor Jürgen Schupp for welcoming me into DIW Berlin and the SOEP and supporting me by providing the institutional infrastructure for my daily work on my thesis and enabling me to attend international summer schools and conferences. As part of the SOEP team, I was a member of a network of supporting and caring colleagues whom I would like to thank for their time and help in discussing and addressing small challenges and obstacles that I encountered while working on this project.

In addition to supervisors and colleagues who have supported me professionally in many ways, I owe my deepest gratitude to my family and friends, especially my parents, Petra and Detlef Sonnenberg, as well as to Christopher R. Beam for their continuous encouragement and patience.

Bettina Sonnenberg
