

## CHASSIS.TECH PLUS SECTION

### KEYNOTE SPEECHES

#### THE CHASSIS OF THE FUTURE

- Automotive development in a process of change** 1  
Prof. Dr. Ulrich Hackenberg, AUDI AG
- Goals and challenges of future chassis developments – solving a multidimensional optimization problem** 3  
Brandon Vivian, General Motors Company, USA;  
Dr. V. Held, Adam Opel AG
- Driving dynamics of the BMW 2 Series Active Tourer (Die Fahrdynamik des BMW 2er Active Tourer)** 7  
Martin Schuster, M. Schwarz, C. Kilian, K. Huber,  
A. Schuhmann, BMW Group

#### TRENDS IN CHASSIS DEVELOPMENT

- Performance-improved simulator for the quantification of steering feel and vehicle maneuvering** 11  
Dr. Shirou Nakano, JTEKT Corporation, Japan
- Automated driving – Where are we heading?** 23  
Dr. Hans-Peter Hübner, Robert Bosch GmbH

## PARALLEL STRAND I

### NEW CHASSIS SYSTEMS

- 918 Spyder – the impulse source for future sports car concepts** 35  
Georg Wahl, Dr. M. Harrer, Dr. A. K. Zschocke,  
Dr. Ing. h.c. F. Porsche AG
- The electronic chassis of the new BMW i8 –  
influence and characterization of driving dynamics** 57  
Dr. Christian Wimmer, J. Felten, Dr. D. Odenthal, BMW Group
- Direct adaptive steering – independent control of steering force  
and wheel angles to improve straight line stability** 75  
Satoshi Miura, Nissan Motor Co., Ltd., Japan

### VEHICLE DYNAMICS TUNING

- Universal steering and suspension application with objective,  
subjective and virtual methods** 91  
Dr. Christian Schimmel, W. Wijts, C. Jablonowski, J. Agostini,  
AUDI AG
- Solution spaces for damper design in vehicle dynamics** 107  
Markus Eichstetter, C. Redeker, Dr. P. Kvasnicka,  
Dr. M. Zimmermann, BMW Group;  
Prof. Dr. S. Müller, Department of Motor Vehicles, TU Berlin
- CAE-based driving comfort optimization for passenger cars** 133  
Dr. Friedrich Wolf-Monheim, J. Palandri, Dr. P. Zandbergen,  
Ford Forschungszentrum Aachen GmbH;  
T. Drotar, Ford Research and Innovation Center, USA

## PARALLEL STRAND II

### CHASSIS FUNCTIONS

- High Integration Platform: a future prospect for chassis functions** 151  
 Stefan Sollmann, Dr. S. Krause, F. Artmeier, G. Hofstetter,  
 T. Witzmann, Elektronische Fahrwerksysteme GmbH
- Torque vectoring as redundant steering  
 for automated driving or steer-by-wire** 163  
 Kristof Polmans, ThyssenKrupp Presta AG, Liechtenstein;  
 S. Stracke, RWTH Aachen University
- Motion control: key element in driver-based  
 and automation-based driving strategies** 179  
 Dr. Thomas Raste, Dr. P. E. Rieth, Continental Teves AG & Co. oHG

### DRIVING SIMULATORS AND DEVELOPMENT METHODS

- Active vehicle ride and handling development  
 by using integrated SIL/HIL techniques  
 in a high-performance driving simulator** 183  
 Marco Fainello, Ferrari SpA, Italy;  
 Diego Minen, VI-grade s.r.l., Italy
- Driving simulator application in commercial vehicle development** 185  
 Dr. Darko Meljnikov, Dr. S. Dronka, L. Noll, Daimler AG
- Evaluation of steering feel and vehicle handling  
 in the Stuttgart Driving Simulator  
 (Bewertung von Lenkgefühl und Fahrverhalten  
 im Stuttgarter Fahrsimulator)** 201  
 Dr. Gerd Baumann, Dr. W. Krantz, J. Pitz, Research Institute  
 of Automotive Engineering and Vehicle Engines Stuttgart (FKFS);  
 U. Reuter, Dr. Ing. h.c. F. Porsche AG;  
 J. Strecker, ZF Lenksysteme GmbH

## STIMULUS ADDRESS

- Banking outlook on automotive suppliers –  
 characteristics of a sustainable and successful business model** 217  
 Jörn Carstens, Thomas Gronemeier, Commerzbank AG

## CHASSIS.TECH SECTION

### RIDE COMFORT

- Air spring damper, on the way to exceptional sliding:  
modeling, development and optimization of an air spring damper  
with regard to ride comfort and handling** 219

Willy Armand Fongue, J. Kieserling, Daimler AG;  
Prof. Dr. P. F. Pelz, Chair for Fluid System Technology,  
TU Darmstadt

- How subjective evaluation by drivers is affected  
by car body stiffening – proposal of a hypothetical mechanism** 249

Hitoshi Kyogoku, J. Nakajima, M. Okabe,  
Nissan Motor Co., Ltd., Japan;  
T. Geluk, F. Daenen, LMS, A Siemens Business, Belgium

- Comparability of dynamic chassis measurements  
with full vehicle tests using the example of a sports car** 259

Sebastian Haberzettl, W. Stein, N. Weijenberg,  
Dr. Ing. h.c. F. Porsche AG;  
Prof. Dr. F. Gauterin, Institute of Vehicle System Technology (FAST),  
Karlsruhe Institute of Technology (KIT)

### VEHICLE STABILITY

- Load problem of lightweight electric vehicles and solution  
by online model adaptation** 281

Florian Kohlhuber, Prof. Dr. M. Lienkamp,  
Institute of Automotive Technology (FTM), TU Munich

- Fast identification of a detailed two-track model  
with onboard sensors and GPS** 303

Jakob Bechtloff, M. Bauer, C. Ackermann, Prof. Dr. Dr. R. Isermann,  
Institute of Automatic Control and Mechatronics (iat), TU Darmstadt

- The influence of production vehicle dynamics control systems  
on the yaw stability of car-trailer combinations** 327

Dr. Jonathan Miller, T. Beretta, BMW Group

**LIGHTWEIGHT DESIGN AND SYSTEMS**

- Methodical conception and development  
of innovative lightweight chassis systems,  
illustrated by the example of the “LEICHT” concept** 331  
Andreas Höfer, Prof. Dr. H. E. Friedrich,  
Institute of Vehicle Concepts (FK),  
Deutsches Zentrum für Luft- und Raumfahrt e. V. (DLR)
- Improving the development of sheet structures  
with optimization and simulation methods** 349  
Sierk Fiebig, J. Sellschopp, A. Rottmann, Volkswagen AG
- Schaeffler’s electromechanical anti-roll system** 361  
Dr. Manfred Kraus, Dr. M. Baeuml,  
Schaeffler Technologies GmbH & Co. KG

## STEERING.TECH SECTION

### INNOVATIVE STEERING SYSTEMS AND REDUNDANCY

- Development of hybrid EPS** 367  
Satoshi Miura, Nissan Motor Co., Ltd., Japan
- The wheel-individually steerable front axle  
of the research vehicle “SpeedE” – virtual design  
and achieved performance of the first prototype** 383  
Benjamin Schwarz, Prof. Dr. L. Eckstein,  
Institute of Automotive Engineering (ika), RWTH Aachen University;  
L. Hesse, Forschungsgesellschaft Kraftfahrwesen mbH  
Aachen (fka)
- Active rear axle kinematics – improving driving dynamics,  
safety and comfort** 411  
Alexander Hägele, F. Berger, Dr. H. Krimmel,  
ZF Friedrichshafen AG

### ELECTRONICS AND TESTING

- Fail-operational EPS by distributed architecture** 421  
Shinya Yoneki, Hirozumi Eki, B. Collerais,  
JTEKT Corporation, Japan; R. Mariani, Yogitech Spa, Italy
- Microcontroller for the EPS functional safety,  
its challenge for fail operational approach** 443  
Takashi Yasumasu, Renesas Electronics Corporation, Japan
- Functional testing of an electric power steering  
using HiL simulations** 455  
Dr. Martín Chávez Grunewald, A. Hauck, H. Brauner, M. Decker,  
Daimler AG

## **HUMAN-MACHINE INTERFACE**

- Steering feel generation in steer-by-wire vehicles –  
modular steering torque computation and requirements  
for the hand wheel actuator** 471

Steve Fankem, Institute of Mechatronics in Mechanical  
and Automotive Engineering (MEC), TU Kaiserslautern;  
Prof. Dr. S. Müller, Department of Motor Vehicles, TU Berlin

- Active Steering Wheel, a new solution  
to implement active steering functionality into a vehicle** 529

Roland Grimm, TAKATA AG

- EPS steering function –  
from active return to driving dynamics function** 545

Roland Greul, J. Strecker, M. Sprinzl, A. Gaedke,  
ZF Lenksysteme GmbH

## BRAKE.TECH SECTION

### THE FUTURE OF THE BRAKING SYSTEM

- Braking in the future – a top-down view** 547  
**(Bremsen in der Zukunft – eine Top-down-Sicht)**  
 Prof. Dr. Hermann Winner, S. Fischer,  
 Institute of Automotive Engineering, TU Darmstadt
- Ideal regeneration with electromechanical Brake Booster (eBKV)** 549  
**in Volkswagen e-up! and Porsche 918 Spyder**  
 Stephan Kreutz, Volkswagen AG; M. Lingg,  
 Dr. Ing. h.c. F. Porsche AG
- Reduced stopping distance for driver-induced** 559  
**and automatic emergency braking by combined control**  
**of friction brakes and electric drive**  
 Dr. Martin Rosenberger, P. Kunsch, AUDI AG

### DEVELOPMENT METHODS

- New test method for reproducible real-time tests of ADAS ECUs:** 575  
**“Vehicle-in-the-Loop” connects real-world vehicles**  
**with the virtual world**  
 Charles Miquet, S. Schwab, R. Pfeffer, IPG Automotive GmbH;  
 M. R. Zofka, T. Bär, Dr. T. Schamm, Prof. Dr. J. M. Zöllner,  
 Research Center for Information Technology (FZI),  
 Karlsruhe Institute of Technology (KIT)
- Ensuring functional safety by networking systems** 591  
**from different domains, illustrated by the example**  
**of an electromechanical brake**  
 Torben Stolte, P. Bergmiller, Prof. Dr. M. Maurer,  
 Institute of Control Engineering (IFR), TU Braunschweig
- Configuration of brake components – CoBra** 611  
 Ulrich Ungethüm, Dr. D. Simon, Continental Teves AG & Co. oHG;  
 L. Šebo, J. Sýkora, Continental Automotive Systems Slovakia s.r.o.

**TESTING AND MODULES OF BRAKING SYSTEMS**

<b>Testing and assessment of AEB systems for consumer protection</b>	623
Andreas Rigling, ADAC e. V. Technik Zentrum	
<b>Modular brake system approach for automated parking and automated driving</b>	633
Dr. Michael Kunz, K.-H. Willmann, H. Wienken, J. Feinauer, Robert Bosch GmbH	
<b>Development of copper-free friction material</b>	647
Konrad Klein, TMD Friction Services GmbH	

## TIRE-WHEEL.TECH SECTION

### NEW TIRE DEVELOPMENTS AND VIRTUAL METHODS

- The co-development of the Bridgestone Ologic tires for the BMWi3: new challenges given by the integration of revolutionary vehicle and tire technologies** 657

Philip Heijnen, Bridgestone Technical Center Europe, Italy;  
Martin Pehlke, T. D'Avanzo, BMW Group

- Application of data mining techniques to tire data within the framework of chassis development** 677

Mark Harris, Prof. Dr. L. Eckstein,  
Institute of Automotive Engineering (ika), RWTH Aachen University

- Simulation-based method to adapt MF-Tire model parameters to real road conditions** 693

Andreas Kerschbaumer, M. Rudigier,  
Virtual Vehicle Research Center, Austria;  
Prof. Dr. W. Hirschberg, Institute of Automotive Engineering (FTG),  
Graz University of Technology, Austria; D. Prezel,  
AVL List GmbH, Austria

### TIRE PRESSURE MONITORING AND MATERIALS

- State of the art iTPMS development** 713

Dr. Thomas Roscher, AUDI AG

- Managing the tire operating conditions** 715

Sven Jansen, Dr. A. Schmeitz,  
TNO Technical Sciences/Automotive, The Netherlands

- Use of fiber-reinforced plastics in wheels for passenger cars** 717

Markus Tomasini, J. Ertl, P. Jägermeyr, Dr. M. Keigler, M. Nagel,  
BMW Group

## **TRACTION**

### **Friction estimation – optimization of sensor configuration with respect to RMSE and costs** 741

Dr. Hans-Ulrich Kobialka, Fraunhofer Institute  
for Intelligent Analysis and Information Systems (IAIS);  
C. Lex, Institute of Automotive Engineering (FTG),  
Graz University of Technology, Austria

### **Tire-road interaction: a multi-scale journey from rubber friction to tire vehicle braking performance** 757

Frank Petry, L. Hartikainen, J. Schouten, W. Schuhmann,  
Dr. S. Westermann, Goodyear Innovation Center Luxembourg

### **Road classification from two-dimensional model-based friction estimation** 761

Hans-Martin Kroll, Dr. B. Buschardt, AUDI AG;  
Dr. Thomas Svantesson, NIRA Dynamics AB, Sweden;  
Dr. K. Schmidt, Audi Electronics Venture GmbH;  
Prof. Dr. M. Lienkamp, Institute of Automotive Technology (FTM),  
TU Munich

CHASSIS.TECH PLUS SECTION

**DRIVER ASSISTANCE AND CHASSIS DEVELOPMENT**

**Research into ADAS with autonomous driving intelligence  
for future innovation** 779

Prof. Masao Nagai, Japan Automobile Research Institute;  
H. Inoue, Toyota Motor Corporation, Japan

**50 years of the Ford Mustang** 795

Prof. Dr. Pim van der Jagt, Dr. P. Zandbergen, N. Zandbergen,  
Ford Forschungszentrum Aachen GmbH;  
T. Drotar, Ford Research and Innovation Center, USA
