1	Introduction	1
1.1	Motivation	1
1.2	Goals of this thesis	3
1.3	Approach of this thesis and outline	6
I	Preliminaries and related work	9
2	Agent-based modeling and simulation	11
2.1	Basic terminology	11
2.1.1	Complex system	11
2.1.2	Model	12
2.1.3	Model development process	13
2.1.4	Simulation	15
2.2	Agent-based modeling and simulation	17
2.2.1	Agent	17
2.2.2	Agent architecture	19
2.2.3	Relationships with other modeling paradigms	21
2.2.4	Benefits and drawbacks of agent-based modeling and simulation	23
2.3	Related work	25
2.3.1	Klügl (2007)	26
2.3.2	Scheutz, Schermerhorn (2006)	30
2.3.3	Ferber, Müller (1996) and Weyns, Holvoet (2003)	33
2.3.4	DEVS and variable structure models	36
2.3.5	Agent-Object-Relationship Simulation	37
2.3.6	Further related work	38

2.3.7	Summary	40
2.4	The role of the environment in agent-based models . .	44
2.4.1	Definition and properties	45
2.4.2	Dynamics	46
3	Parallel and distributed multi-agent simulation	49
3.1	Basic terminology	49
3.2	Motivation and requirements with respect to multi-agent simulation	51
3.3	Existing approaches and their limitations	53
3.3.1	Pawlaszczyk (2009)	54
3.3.2	Logan, Theodoropoulos (2001)	55
3.3.3	P. Riley, G. Riley (2003)	55
3.3.4	Scheutz, Schermerhorn (2006)	56
3.3.5	Aaby et al. (2010)	57
3.3.6	Further related work	58
4	Summary	61
II	Effective and efficient model development	63
5	The need for a reference model for agent-based modeling and simulation	65
5.1	Current problems and needs of agent-based modeling and simulation	65
5.1.1	Weak definitions of basic terms and concepts . .	65
5.1.2	Bad support of collaborative development . . .	67
5.1.3	Need for improvement of quality by standardization	68
5.2	General purpose of reference models	68
5.3	Requirements for a reference model	69
5.3.1	Clear distinction between model and simulation engine	70
5.3.2	Simulated environment	71

5.3.3	Simulation time	71
5.3.4	Agents and objects	72
5.3.5	Actions, effects and constraints	72
5.3.6	Abstraction from specific agent architectures .	73
5.3.7	Formal specification	73
6	GRAMS – General Reference Model for Agent-based Modeling and Simulation	75
6.1	Aims and target audience	75
6.2	Basic idea of the GRAMS reference model	76
6.3	Definition of an agent-based model	78
6.4	Macro-level modeling	81
6.4.1	Simulation time	81
6.4.2	Environment	82
6.4.3	Embedding of entities	84
6.5	Events	85
6.6	Micro-level modeling	88
6.6.1	Attributes of agents and objects	89
6.6.2	Sensors and effectors	90
6.6.3	State of an agent	95
6.6.4	Constraints	95
6.6.5	Behavior of an agent	98
6.7	Simulation of an agent-based model	100
6.8	Application areas of the GRAMS reference model . . .	102
6.9	Evaluation	104
6.9.1	Mapping of basic agent architectures	104
6.9.2	Case studies	108
7	Summary	111

III	Effective model execution	115
8	Model partitioning and multi-level parallelization	117
8.1	Model partitioning strategies	117
8.1.1	Terms and definitions	117
8.1.2	Conflict detection as bottleneck	120
8.1.3	Partitioning strategy: node-level, per agent, static	122
8.1.4	Partitioning strategy: node-level, per agent, dynamic	123
8.1.5	Partitioning strategies on cluster-level	127
8.2	Parallel execution	129
8.2.1	Parallelization on node- and processor-level	130
8.2.2	Parallelization on cluster-level	131
8.2.3	Multi-level parallelization	131
8.3	Reliability of a simulation environment	132
9	Example implementation of GRAMS	133
9.1	Overview	133
9.2	Representation of an agent-based model	136
9.2.1	Simulation time	137
9.2.2	Environment	138
9.2.3	Events	139
9.2.4	Constraints	140
9.2.5	Entities	142
9.3	Simulation engines	143
9.3.1	Single-threaded event-driven simulation engine	144
9.3.2	Single-threaded time-stepped simulation engine	146
9.3.3	Parallelization on node-level	147
9.3.4	Parallelization on cluster-level	151
9.4	Test and verification	151
9.5	Empirical measurements	154
9.5.1	Simulation model used for benchmarks	154
9.5.2	Benchmark suite 0: Dependency between simulation time and runtime	158

9.5.3	Benchmark suites 1 and 2: Dependency between number of agents and runtime	160
9.5.4	Benchmark suite 3: Parallelization on node-level	165
10	Summary	169
IV	Conclusions	173
11	Conclusions and outlook	175
11.1	Summary	175
11.2	Scientific contributions and applicability	176
11.3	Outlook	179
V	Appendix	181
A	Case studies of the GRAMS reference model	183
A.1	Case study: Warehouse	183
A.1.1	Structured problem description	183
A.1.2	Conceptual model	191
A.2	Case study: Joint Fire Support	204
	Bibliography	207

Modeling and Simulation of Complex Systems
A Framework for Efficient Agent-Based Modeling and Simulation

Siegfried, R.

2014, XIX, 227 p. 40 illus., 13 illus. in color., Softcover

ISBN: 978-3-658-07528-6
