Abstract	V
Acknowledgments	VII
1 Motivation and Introduction	1
1.1 Numerical Optimization in the Multicore Era	1
1.1.1 A Nonlinear Least-Squares Problem	6
1.2 Algorithmic Differentiation	11
1.2.1 Second Derivative Code	18
1.2.2 dcc - A Derivative Code Compiler	21
1.2.3 A Nonlinear Constrained Optimization Problem	26
1.3 OpenMP Standard 3.1	29
1.4 Related Work	52
1.5 Contributions	55
1.6 Outline of the Thesis	58
2 Transformation of Pure Parallel Regions	61
2.1 Formalism and Notation	61
2.2 <i>SPL</i> - A Simple Language for Parallel Regions	79
2.3 AD Source Transformation of <i>SPL</i> Code	85
2.3.1 Tangent-Linear Model of <i>SPL</i> - Transformation $\tau(P)$	86
2.3.2 Adjoint Model of <i>SPL</i> - Transformation $\sigma(P)$	94
2.3.3 <i>SPL</i> Code Inside of C/C++ Code	113
2.4 Closure of the Source Transformation	116
2.4.1 Closure Property of $\tau(P)$	116
2.4.2 Closure Property of $\sigma(P)$ and the Exclusive Read Property	118
2.5 Summary	134
3 Exclusive Read Analysis	137
3.1 Control Flow in <i>SPL</i> code	142
3.2 Integer Interval Analysis	146
3.3 Directed Acyclic Graphs and Partial Orders	148

3.4	Intervals of Directed Acyclic Graphs	156
3.5	Data Flow Analysis with DAG Intervals	158
3.5.1	Widening and Narrowing Operators	164
3.5.2	Data Flow Analysis of Conditional Branches	172
3.6	Towards the Exclusive Read Property	177
3.7	Summary	184
4	Transformation of OpenMP Constructs	187
4.1	Stack Implementation for the Adjoint Code	187
4.2	<i>SPLOMP</i> ¹ - Synchronization Constructs	189
4.2.1	Synchronization with Barriers	191
4.2.2	Synchronization per master Construct	199
4.2.3	Synchronization per critical Construct	200
4.2.4	Synchronization per atomic Construct	211
4.2.5	Closure of <i>SPLOMP</i> ¹	218
4.3	<i>SPLOMP</i> ² - Worksharing Constructs	223
4.3.1	Loop Construct	226
4.3.2	sections Construct	234
4.3.3	single Construct	235
4.3.4	Combined Parallel Constructs	236
4.4	<i>SPLOMP</i> ³ - Data-Sharing	238
4.4.1	Global Data - threadprivate Directive	238
4.4.2	Thread-Local Data - private Clause	240
4.4.3	firstprivate Construct	244
4.4.4	lastprivate Construct	248
4.4.5	reduction Clause	258
4.5	Summary	268
5	Experimental Results	269
5.1	Test Suite	271
5.1.1	Pure Parallel Region	272
5.1.2	Parallel Region with a Barrier	281
5.1.3	Parallel Region with a master Construct	290
5.1.4	Parallel Region with a Critical Region	291
5.1.5	Parallel Region with atomic Construct	300
5.2	Second Derivative Codes	315
5.3	Exclusive Read Analysis	317
5.4	Least-Squares Problem	323
5.5	Nonlinear Constrained Optimization Problem	323

5.6 Summary 328

6 Conclusions 331

6.1 Results 331

6.2 Future Work 333

A SPLc - A *SPL* compiler 337

A.1 Building SPLc 337

A.2 User Guide 337

A.3 Developer Guide 339

B Test Suite 341

Bibliography 397

Index 403

Algorithmic Differentiation of Pragma-Defined Parallel
Regions

Differentiating Computer Programs Containing OpenMP
