1	Decentralized Fuzzy-Neural Identification and I-Term Adaptive Control of Distributed Parameter Bioprocess Plant	1
	Ieroham Baruch and Eloy Echeverria Saldierna	
1.1	Introduction	1
1.2	Description of the RTNN Topology and Learning	3
1.2.1	Description of the RTNN Topology and Its Real-Time BP Learning	3
1.2.2	Description of the Real-Time Second-Order Levenberg-Marquardt Learning	7
1.3	Description of the Decentralized Direct I-Term Fuzzy-Neural Multi-Model Control System.	8
1.4	Description of the Decentralized Indirect (Sliding Mode) I-Term Fuzzy-Neural Multi-Model Control System	12
1.4.1	Sliding Mode Control Systems Design.	14
1.5	Analytical Model of the Anaerobic Digestion Bioprocess Plant	16
1.6	Simulation Results.	19
1.6.1	Simulation Results of the System Identification	19
1.6.2	Simulation Results of the Direct HFNMM Control with and without I-Term	23
1.6.3	Simulation Results of the Indirect HFNMM I-Term SMC.	27
1.7	Conclusion	34
	Appendix 1: Detailed Derivation of the Recursive Levenberg-Marquardt Optimal Learning Algorithm for the RTNN	35
	Appendix 2.	41
	References	41
2	Error Tolerant Predictive Control Based on Recurrent Neural Models	45
	Petia Georgieva and Sebastião Feyo de Azevedo	
2.1	Introduction	45
2.2	Model Predictive Control Algorithms.	47

2.3	Neural Dynamical Process Model	49
2.3.1	NN Final Impulse Response (NNFIR) Model	50
2.3.2	NN Auto Regressive with eXogenous Input (NNARX) Model	50
2.3.3	NN Auto Regressive Moving Average with eXogenous Input (NNARMAX) Model	51
2.3.4	NN Output Error (NNOE) Model	51
2.4	Identification Experiments	54
2.4.1	Classical (one test) Identification Experiment	54
2.4.2	Double Test Identification	55
2.5	Error Tolerant MPC	55
2.5.1	Problem Formulation	55
2.5.2	Selection of MPC Parameters	57
2.5.3	Normalized ETMPC	57
2.6	Sugar Crystallization Case Study	58
2.6.1	Process Description	58
2.6.2	Crystallization Macro Model	59
2.7	Neural Model Identification	61
2.7.1	Identification Experiments	61
2.7.2	NN Structure Selection	62
2.8	NN ETMPC Control Tests	65
2.8.1	Set-Point Tracking	66
2.8.2	Computational Time Reduction	68
2.8.3	Final Product Quality	69
2.9	Conclusions	70
	References	71
3	Advances in Multiple Models Based Adaptive Switching Control: From Conventional to Intelligent Approaches	73
	Nikolaos A. Sofianos and Yiannis S. Boutalis	
3.1	Introduction	73
3.2	Single Model Adaptive Control and Multiple Models Switching Adaptive Control	75
3.2.1	Adaptive Control Basics	76
3.2.2	An Overview of Multiple Models Switching Control Methods	77
3.3	Multiple Models Switching Control and Neural Networks	87
3.3.1	Multiple Models Adaptive Control for SISO and MIMO Discrete-Time Nonlinear Systems Using Neural Networks	87
3.4	Multiple Models Switching Control and Fuzzy Systems	90
3.4.1	The Role of T-S Fuzzy Systems	91
3.4.2	Multiple T-S Fuzzy Models for More Reliable Control Systems	91

3.4.3	Problem Statement and Single Identification Model	92
3.4.4	Architecture	93
3.4.5	Switching Rule and Cost Criterion	94
3.4.6	T-S Identification Models, Controller Design and Next Best Controller Logic	95
3.4.7	Stability, Adaptive Law, Convergence and Computational Cost.	98
3.4.8	Another Approach with Hybrid T-S Multiple Models . . .	101
3.5	Numerical Example	102
3.6	Conclusions	105
	References	105
4	A Computational Intelligence Approach to Software Component Repository Management.	109
	D. Vijay Rao and V. V. S. Sarma	
4.1	Introduction	110
4.2	A Computational Intelligence Based Approach Using Rough and Fuzzy Sets to Model the Component Retrieval Problem. . .	112
4.3	Rough Sets	113
4.4	Fuzzy Sets	113
4.5	Rough-Fuzzy Sets	114
4.6	Fuzzy-Rough Sets	115
4.7	A Case Study of the Design and Development of Air Warfare Simulation Systems	115
4.7.1	Use of Rough-Fuzzy Sets.	117
4.7.2	Use of Fuzzy-Rough Sets.	127
4.8	Conclusions	130
	References	130
5	A Soft Computing Approach to Model Human Factors in Air Warfare Simulation System	133
	D. Vijay Rao and Dana Balas-Timar	
5.1	Introduction	134
5.2	An Agent-Based Architecture to Design Military Training Operations.	134
5.3	Mathematical Modelling of Pilot Behavior	136
5.4	A Neuro-Fuzzy Hybridization Approach to Model the Pilot Agent in AWSS	141
5.4.1	ANFIS.	141
5.4.2	Modeling the Human Factors and Situation Awareness of Pilot Agent.	143
5.5	Design of Conflict Situations and Discussion of Results.	146
5.6	Conclusions and Future Work	151
	References	152

6 Application of Gaussian Processes to the Modelling and Control in Process Engineering	155
Juš Kocijan and Alexandra Grancharova	
6.1 Introduction	156
6.2 Systems Modelling with Gaussian Processes	156
6.3 Control Algorithms Based on Gaussian Process Models	160
6.3.1 Inverse Dynamics Control	160
6.3.2 Model-Based Predictive Control	163
6.3.3 Adaptive Control	173
6.4 Design of Explicit GP-NMPC of a Gas–Liquid Separator	176
6.4.1 The Gas–Liquid Separator	176
6.4.2 Gaussian Process Model of the Gas–Liquid Separator	179
6.4.3 Design and Performance of Explicit GP-NMPC	182
6.5 Conclusions	187
References	187
7 Computational Intelligence Techniques for Chemical Process Control	191
N. Paraschiv, M. Oprea, M. Cărbureanu and M. Olteanu	
7.1 Objectives and Conventional Automatic Control of Chemical Processes	191
7.1.1 Objectives of Chemical Processes	192
7.1.2 Conventional Automatic Control of Fractionating Processes	196
7.1.3 Conventional Automatic Control of Heat Transfer Processes	201
7.1.4 Conventional Automatic Control of Chemical Reactors	204
7.2 Computational Intelligence Techniques for Process Control	206
7.2.1 Computational Intelligence Techniques	207
7.2.2 Applications of Computational Intelligence in Chemical Process Control	211
7.3 Case study: The Wastewater <i>pH</i> Neutralisation Process in a Wastewater Treatment Plant	213
7.3.1 The Process Mathematical Model Development	215
7.3.2 The R-ANFIS Controller Development	217
7.3.3 pHACS Implementing in Matlab/Simulink	219
7.4 Conclusion	223
References	224
8 Application of Swarm Intelligence in Fuzzy Entropy Based Image Segmentation	227
