

Contents

1	Introduction and Overview	1
1.1	Background of Integrated Water Management	1
1.2	Overview of Input–Output Table	2
1.2.1	Theoretical Exploitation and Empirical Studies	4
1.2.2	The Differences Between National and Regional Input–Output Study	6
1.2.3	The User Needs of Compiling Regional Input–Output Tables	7
1.3	Overview of Computable General Equilibrium (CGE) Model	8
1.3.1	Application of CGE Model in Water Management	8
1.3.2	An Integrated CGE Model with Resource and Environment Account	10
1.3.3	Challenges Facing the Integrated CGE Models	13
	References	14
2	Approach of Input–Output Table at Regional Level	19
2.1	Methods of Commodity Flows Estimation	19
2.1.1	Location Quotients	20
2.1.2	Gravity Model	21
2.1.3	Regression Equation	22
2.2	Methods of Input–Output Table Compilation	23
2.2.1	Survey-Based Regional Input–Output Methods	24
2.2.2	Non-Survey-Based Regional Input–Output Methods	27
2.3	The Water and Land Resources Integrated Input–Output Table	30
2.3.1	The Water Resource Integrated Input–Output Table	31
2.3.2	The Land Resource Integrated Input–Output Table	32
	References	34
3	Compilation of Regional Input–Output Table	35
3.1	Preparatory Work	35
3.2	Questionnaire Structure and Fill Method	38
3.3	Steps of Input–Output Table Compilation	38
3.4	Data Collection Methods	45

3.4.1	Historical Records	47
3.4.2	Statistical Survey	47
3.5	Identification of the Leading Industries	52
3.5.1	Concept of Leading Industry	52
3.5.2	Identification Methods	53
4	The Integrated CGE Model Construction	57
4.1	Model Framework and Function	57
4.2	Equations Included in the Integrated CGE Model	58
4.2.1	Price Equations	58
4.2.2	Production-Related Equations Defined at the National Level	61
4.2.3	Production-Related Equations Defined at the Subnational Level	63
4.2.4	Water Demand and Supply	67
4.2.5	Imports and Exports	68
4.2.6	Incomes and Demands	70
4.2.7	Factor Markets	73
4.3	Model Notations	74
	Reference	78
5	Implementation	79
5.1	Interactive Model Building Environment	81
5.2	Database of the Model	83
5.3	The Percentage-Change Approach to Model Solution	86
5.4	Levels and Linearized Systems Compared	89
5.5	The Initial Solution	91
5.6	The Key Function of Water and Land Accounts	92
5.7	The TABLO Language	96
	References	99

Integrated River Basin Management
Practice Guideline for the IO Table Compilation and CGE
Modeling

Deng, X.; Wang, Y.; Wu, F.; Zhang, T.; Li, Z.

2014, XII, 99 p. 9 illus., Softcover

ISBN: 978-3-662-43465-9
