1 Olefin Polymerization with Metallocene Catalysts	1
Takeshi Shiono	
1.1 Introduction	1
1.2 Elementary Processes of Olefin Polymerization.	3
1.2.1 Initiation and Propagation Reactions	3
1.2.2 Chain Transfer and Termination Reaction	3
1.2.3 Molecular Weight and Molecular Weight Distribution.	5
1.3 Structure of Vinyl Polymer and Stereospecific Polymerization	8
1.3.1 Stereoregularity of Vinyl Polymer.	8
1.3.2 Regiochemistry in Propylene Polymerization	8
1.3.3 Origin of Stereospecificity	10
1.3.4 Polymerization Mechanism and Microtacticity	11
1.4 Copolymer and Copolymerization	16
1.4.1 Structure of Copolymers	16
1.4.2 Copolymerization	16
1.5 Characteristics of Metallocene Catalysts.	27
1.5.1 Activation Process of Metallocene	27
1.5.2 Tacticity Control of Polypropylene	31
1.5.3 Control of Chain Transfer Reaction.	39
1.5.4 Copolymerization of Olefins.	41
1.6 Conclusion	46
References	47
2 Olefin Polymerization with Half-Metallocene Catalysts	51
Kotohiro Nomura and Jingyu Liu	
2.1 Introduction	51
2.2 Modified Half-Titanocenes as Olefin Polymerization Catalysts.	52
2.2.1 Olefin Polymerization by Half-Titanocenes Containing Aryloxo Ligands.	54
2.2.2 Selected Examples in Olefin Polymerization by Half-Titanocenes Containing the Other Anionic Ancillary Donor Ligands	56

2.2.3	Copolymerizations of Ethylene with Sterically Encumbered α -olefins	59
2.2.4	Copolymerization with Cyclic Olefins	67
2.3	Syndiospecific Styrene Polymerization and Ethylene/Styrene Copolymerization Using Half-Titanocenes: Ligand Effects and Some New Mechanistic Aspects	70
2.3.1	Syndiospecific Styrene Polymerization Using $\text{Cp}^*\text{TiX}_2(\text{Y})$ -MAO Catalyst Systems	71
2.3.2	Ethylene/Styrene Copolymerization Using Half-Titanocenes	73
2.3.3	Role of Anionic Donor Ligand in Ethylene/Styrene Copolymerization and Syndiospecific Styrene Polymerization: Mechanistic Considerations	79
2.4	Summary and Outlook	81
	References	82
3	Olefin Polymerization with Non-metallocene Catalysts (Early Transition Metals)	89
	Kotohiro Nomura and Wenjuan Zhang	
3.1	Introduction	89
3.2	Design, Synthesis of Molecular Catalyst with Early Transition Metals	90
3.2.1	Titanium, Zirconium, and Hafnium Complexes	90
3.2.2	Vanadium Complexes	98
3.2.3	Miscellaneous Early Transition Metal Complex Catalysts	109
3.3	Summary and Outlook	113
	References	113
4	Olefin Polymerization with Non-metallocene Catalysts (Late Transition Metals)	119
	Daisuke Takeuchi	
4.1	Introduction: Brief History of Late Transition Metal Catalysts for Olefin Polymerization	120
4.2	Polymerization of Olefins Catalyzed by Cationic Pd and Ni Complexes with Neutral Ligands	121
4.2.1	Cationic Ni and Pd Catalysts with Diimine Ligands	122
4.2.2	Cationic Complexes with Other Bidentate Neutral Ligands	132
4.2.3	Cationic Complexes with Monodentate and Tridentate Ligands	133
4.3	Polymerization of Olefins by Neutral Pd and Ni Complexes with Monoanionic Ligands	134

4.3.1	Neutral Complexes with Monoanionic N-O Ligands	134
4.3.2	Phosphinesulfonate Complexes of Pd	138
4.3.3	Neutral Complexes with Other Monoanionic Ligands . . .	140
4.4	Polymerization of Olefins by Fe and Co Complexes	141
4.5	Polymerization of Olefins by Other Late Transition Metal Catalysts	146
4.6	Multimetallic Catalysts	146
4.7	Olefin Polymerization in Aqueous Media	149
4.8	Cyclopolymerization of Non-conjugated Dienes	150
4.9	Summary	153
	References	154
5	Oligomerization of Olefins	169
	Daisuke Takeuchi and Kohtaro Osakada	
5.1	Introduction	169
5.2	Oligomerization of Ethylene	170
5.2.1	General Aspect	170
5.2.2	Ethylene Oligomerization to Olefins with Schulz-Flory Distribution and Dimerization.	171
5.2.3	Ethylene Oligomerization to α -Olefins with Poisson Distribution	176
5.3	Selective Trimerization of Ethylene	177
5.3.1	Chromium Catalyst	177
5.3.2	Titanium Catalyst	189
5.3.3	Tantalum Catalyst	192
5.3.4	Ruthenium Catalyst	193
5.4	Tetramerization of Ethylene	194
5.4.1	Effect of Ligand Structure	195
5.4.2	Effect of Cocatalysts and Additives.	199
5.4.3	Mechanism of Cr-Catalyzed Ethylene Tetramerization. . .	200
5.5	Dimerization of α -Olefins	201
5.6	Trimerization of α -Olefins	204
5.7	Cooligomerization of Ethylene and α -Olefins	205
5.8	Cooligomerization of Other Vinyl Monomers	206
5.9	Summary	207
	References	207
6	Polymerization of Polar Monomers.	217

6.1	Introduction	217
6.2	Coordination-Addition Polymerization of Polar Monomers	218
6.3	Block Copolymerization of Polar Monomers and Non-polar Monomers	221

6.4	Random Copolymerization of Polar Monomers and Non-polar Monomers	221
6.4.1	General Aspects on Coordination-Insertion Polymerization of Polar Vinyl Monomers	223
6.4.2	Diimine/Pd or Ni Catalyst	224
6.4.3	Phosphine-Sulfonate/Pd Catalyst	229
6.5	Copolymerization of Polar Monomers with Other Monomers	232
6.6	Conclusions and Outlook	234
	References	234
7	Metathesis and Polymerization	237
	Kohtaro Osakada	
7.1	Introduction	237
7.2	Catalysts	240
7.2.1	Multicomponent Catalysts	240
7.2.2	Homogeneous Catalysts	241
7.3	Application of Olefin Metathesis	249
7.3.1	Synthesis of the Polymers with New Structures and Functionality	249
7.3.2	Synthesis and Reactions of the Ligand of Transition Metal Complexes	252
7.3.3	Synthesis of Natural Products	257
7.3.4	Interlocked Molecules	260
7.4	Conclusion	266
	References	266
8	Cross-Coupling Polymerization	271
	Take-aki Koizumi and Takaki Kanbara	
8.1	Introduction	271
8.2	Ni-Catalyzed Polycondensation	272
8.3	Pd-Catalyzed Polycondensation	276
8.4	Cu-Catalyzed Polycondensation	289
8.5	Recent Topics of the Polymers Synthesized by Using Cross-Coupling Polymerization Methods	291
8.6	Summary	297
