## Part I Papers by Invited Speakers

|                                                                                       |           |
|---------------------------------------------------------------------------------------|-----------|
| <b>Competitive Exclusion Through Discrete Time Models . . . . .</b>                   | <b>3</b>  |
| Azmy S. Ackleh and Paul L. Salceanu                                                   |           |
| <b>Benford Solutions of Linear Difference Equations. . . . .</b>                      | <b>23</b> |
| Arno Berger and Gideon Eshun                                                          |           |
| <b>Harvesting and Dynamics in Some One-Dimensional<br/>Population Models. . . . .</b> | <b>61</b> |
| Eduardo Liz and Frank M. Hilker                                                       |           |
| <b>Chaos and Wild Chaos in Lorenz-Type Systems. . . . .</b>                           | <b>75</b> |
| Hinke M. Osinga, Bernd Krauskopf and Stefanie Hittmeyer                               |           |

## Part II Contributed Papers

|                                                                                                               |            |
|---------------------------------------------------------------------------------------------------------------|------------|
| <b>Almost Automorphic Sequences and Their Application<br/>to a Model of Cellular Neural Network . . . . .</b> | <b>101</b> |
| Syed Abbas                                                                                                    |            |
| <b>Advances in Periodic Difference Equations with Open Problems. . . . .</b>                                  | <b>113</b> |
| Ziyad AlSharawi, Jose S. Cánovas and Antonio Linero                                                           |            |
| <b>An Evolutionary Beverton-Holt Model . . . . .</b>                                                          | <b>127</b> |
| J. M. Cushing                                                                                                 |            |
| <b>The Periodic Decomposition Problem. . . . .</b>                                                            | <b>143</b> |
| Bálint Farkas and Szilárd Gy. Révész                                                                          |            |

|                                                                                                                               |            |
|-------------------------------------------------------------------------------------------------------------------------------|------------|
| <b>Existence of Periodic and Almost Periodic Solutions<br/>of Discrete Ricker Delay Models . . . . .</b>                      | <b>171</b> |
| Yoshihiro Hamaya                                                                                                              |            |
| <b>Generalized Lagrange Identity for Discrete Symplectic<br/>Systems and Applications in Weyl–Titchmarsh Theory . . . . .</b> | <b>187</b> |
| Roman Šimon Hilscher and Petr Zemánek                                                                                         |            |
| <b>Dynamic Selection Systems and Replicator Equations. . . . .</b>                                                            | <b>203</b> |
| Zdeněk Pospíšil                                                                                                               |            |
| <b>Asymptotic Equivalence of Difference Equations in Banach Space. . . .</b>                                                  | <b>215</b> |
| Andrejs Reinfelds                                                                                                             |            |

Theory and Applications of Difference Equations and  
Discrete Dynamical Systems

ICDEA, Muscat, Oman, May 26 - 30, 2013

AlSharawi, Z.; Cushing, J.; Elaydi, S. (Eds.)

2014, XVI, 222 p. 29 illus., 23 illus. in color., Hardcover

ISBN: 978-3-662-44139-8
