

Contents

1	Introduction	1
2	Continuum Mechanics of Plasticity	5
2.1	General Comments and Observations	5
2.2	Yield Condition	8
2.3	Flow Rule	11
2.4	Hardening Rule	13
2.4.1	Isotropic Hardening	13
2.4.2	Kinematic Hardening	14
2.4.3	Combined Hardening	17
2.5	Effective Stress and Effective Plastic Strain	18
2.6	Elasto-Plastic Modulus	20
2.7	Consideration of Unloading, Reversed Loading and Cyclic Loading	23
2.8	Consideration of Damage	25
2.8.1	Lemaitre's Damage Model	25
2.8.2	Gurson's Damage Model	29
2.9	Supplementary Problems	34
3	Axial Loading of Rods	37
3.1	Kinematics	37
3.2	Constitutive Equation	38
3.3	Equilibrium	39
3.4	Governing Differential Equation	40
3.5	Analytical Solutions	41
3.5.1	Elastic Range	41
3.5.2	Elasto-Plastic Range	44
3.6	Supplementary Problems	51

4	Bending of Beams	55
4.1	Introduction	55
4.2	Bernoulli Beam Theory	58
4.2.1	Kinematics	58
4.2.2	Equilibrium	62
4.2.3	Constitutive Equation	64
4.2.4	Governing Differential Equation	67
4.2.5	Analytical Solutions in the Elastic Range	69
4.2.6	Analytical Solutions in the Elasto-Plastic Range	81
4.3	Timoshenko Beam Theory	106
4.3.1	Kinematics	111
4.3.2	Equilibrium	113
4.3.3	Constitutive Equation	113
4.3.4	Governing Differential Equation	114
4.3.5	Analytical Solutions in the Elastic Range	116
4.4	Higher-Order Beam Theories	119
4.4.1	Overview on Different Concepts	119
4.4.2	Analytical Solutions in the Elasto-Plastic Range	131
4.5	Supplementary Problems	139
4.5.1	Bernoulli Beam Problems	139
4.5.2	Timoshenko Beam Problems	146
4.5.3	Third Order Beam Problems	148
5	Review of Linear-Elastic Finite Element Simulations	151
5.1	General Concept of the Weighted Residual Method	151
5.1.1	Methods Based on the Inner Product	152
5.1.2	Methods Based on the Weak Formulation	156
5.1.3	Procedure on Basis of the Inverse Formulation	158
5.1.4	Solved Problems	160
5.2	Rod Elements	166
5.2.1	Derivation of the Principal Finite Element Equation	166
5.2.2	Derivation of Shape Functions	179
5.2.3	Assembly of Elements and Consideration of Boundary Conditions	183
5.2.4	Post-computation: Determination of Strain, Stress and Further Quantities	192
5.2.5	Analogies to Other Field Problems	194
5.2.6	Solved Problems	195
5.3	Bernoulli Beam Elements	204
5.3.1	Derivation of the Principal Finite Element Equation	204
5.3.2	Derivation of Shape Functions	213
5.3.3	Assembly of Elements and Consideration of Boundary Conditions	218

5.3.4	Post-computation: Determination of Stress, Strain and Further Quantities	224
5.3.5	Solved Problems	224
5.4	Timoshenko Beam Elements	236
5.4.1	Derivation of the Principal Finite Element Equation	236
5.4.2	Linear Shape Functions for the Deflection and Displacement Field	241
5.4.3	Higher-Order Shape Functions for the Beam with Shear Contribution	252
5.4.4	Solved Problems	258
5.5	Assembly of Elements to Plane Truss Structures	267
5.5.1	Rotational Transformation in a Plane	267
5.5.2	Solved Problems	269
5.6	Assembly of Elements to Plane Frame Structures	273
5.6.1	Rotation of a Beam Element	273
5.6.2	Generalized Beam Element	276
5.6.3	Solved Problems	283
5.7	Supplementary Problems	293
5.7.1	Weighted Residual Method Problems	293
5.7.2	Rod Element Problems	293
5.7.3	Bernoulli Beam Element Problems	300
5.7.4	Timoshenko Beam Element Problems	307
5.7.5	Plane Truss Structure Problems	307
5.7.6	Plane Frame Structure Problems	309
6	Elasto-Plastic Finite Element Simulations	313
6.1	Integration of the Constitutive Equations	313
6.2	Derivation of the Fully Implicit Backward-Euler Algorithm for Isotropic Hardening	319
6.3	Derivation of the Fully Implicit Backward-Euler Algorithm for Kinematic Hardening	325
6.4	Derivation of the Fully Implicit Backward-Euler Algorithm for Combined Hardening	327
6.5	Consideration of Damage	330
6.5.1	Lemaitre Damage Model	330
6.5.2	Gurson Damage Model	337
6.6	Solved Examples	340
6.7	Supplementary Problems	374
7	Alternative Approach: The Finite Difference Method	381
7.1	Idea and Derivation of the Method	381
7.2	Investigation of Rods in the Elastic Range	389
7.2.1	Constant Material and Geometry Parameters	389
7.2.2	Varying Material and Geometry Parameters	393

7.3	Investigation of Bernoulli Beams in the Elastic Range	401
7.3.1	Approximation of the Differential Equation	401
7.3.2	Solved Problems	403
7.4	Investigation of Timoshenko Beams in the Elastic Range	413
7.5	Consideration of Bernoulli Beams with Plastic Material Behavior	417
7.6	Supplementary Problems	426
8	Prelude to the General Three-Dimensional Case	437
8.1	Equilibrium	437
8.2	Constitutive Equation	439
8.3	Kinematics	440
8.4	Governing Differential Equation	441
8.5	Derivation of the Principal Finite Element Equation	442
8.6	Hexahedron Solid Elements	446
8.6.1	Evaluation of the Boundary Force Matrix	451
8.6.2	Evaluation of the Body Force Matrix	454
8.7	Derivation of the Fully Implicit Backward Euler Algorithm for Isotropic Hardening	456
8.8	Supplementary Problems	460
	Appendix A: Mathematics	463
	Appendix B: Mechanics	491
	Appendix C: Units and Conversion	501
	Answers to Supplementary Problems	505
	References	587
	Index	593

Elasto-Plasticity of Frame Structure Elements
Modeling and Simulation of Rods and Beams

Öchsner, A.

2014, XX, 596 p. 328 illus., Hardcover

ISBN: 978-3-662-44224-1
