

Contents

1	Introduction	1
1.1	Most Dominating Renewable Power Sources	1
1.1.1	Historical Growth of Wind Power Generation Capacity	2
1.1.2	Technical Challenges and Possible Solutions	3
1.1.3	Historical Growth of Solar PV Power Generation Capacity	7
1.1.4	Technical Challenges of Solar PV Power Generation Systems	8
1.1.5	Possible Solution to Technical Challenges for Large-Scale Renewable Generation Systems	10
1.2	Major Objectives of the Book	10
1.3	Contribution of the Book	11
1.4	Organization of the Book	12
	References	13
2	Power Converters for Small- to Large-Scale Photovoltaic Power Plants	17
2.1	Introduction	17
2.2	Solar Photovoltaic Arrays	21
2.2.1	Solar Photovoltaic Array Modeling	22
2.2.2	Solar Photovoltaic Array Characteristics	24
2.2.3	Solar Photovoltaic Array Maximum Power Point	25
2.3	Inverters in Small-Scale Solar PV Systems	28
2.3.1	Two-Stage Solar PV Inverters for Small-Scale Systems	28
2.3.2	Multiple-Stages Solar PV Inverters for Small-Scale Systems	31
2.3.3	Single-Stage Solar PV Inverter for Small-Scale Systems	34
2.3.4	ABB and Siemens Solar PV Inverters for Small-Scale Systems	37
2.4	Medium- and Large-Scale Solar PV Systems	38
2.5	Summary	46
	References	47

3	Power Converter Topologies for Grid-Integrated Medium-Voltage Applications	51
3.1	Introduction	51
3.2	Two-Level Converters	53
3.2.1	Single-Phase Converter	53
3.2.2	Three-Phase Converter	58
3.2.3	Space Vector Pulse Width Modulation (SV-PWM)	60
3.3	Multilevel Converters	73
3.3.1	Neutral Point Clamped Converter	78
3.3.2	Flying Capacitor Converter	80
3.3.3	Modular Multilevel Cascaded Converter	81
3.3.4	Switching Schemes of Multilevel Converters	83
3.4	Selection of Multilevel Converter Topology for Medium-Voltage Applications	95
3.4.1	Detailed Design and Analysis of 5-Level and 11-Level NPC Converters	97
3.4.2	Detailed Design and Analysis of 5-Level and 11-Level FC Converters	99
3.4.3	Detailed Design and Analysis of 5-Level and 11-Level MMC Converters	101
3.4.4	Performance Analysis and Topology Selection	102
3.5	Summary	105
	References	105
4	Design and Characterization of High-Frequency Magnetic Links Used in Power Electronic Converters	109
4.1	Introduction	109
4.2	Design of High-Frequency Magnetic Links	113
4.2.1	Flowchart of High-Frequency Magnetic-Link Design	114
4.2.2	Core Material Selection	114
4.2.3	Calculation of Number of Turns	118
4.2.4	Winding Wire Selection	121
4.2.5	Parasitic Calculation	125
4.2.6	Design Optimization	128
4.2.7	Transformer Core Development	131
4.3	Characterization of High-Frequency Magnetic Links	136
4.3.1	Windings DC Resistance Calculation	136
4.3.2	Voltage Transformation Ratio Calculation	138
4.3.3	Measurement of Losses	140
4.3.4	Measurement of B–H Characteristics	144
4.3.5	Measurement of DC-Link Voltages	149
4.4	Summary	150
	References	151

5	FPGA-Based Digital Switching Controller for Multilevel Converters. . .	153
5.1	Introduction	153
5.1.1	ASIC Technology	154
5.1.2	DSP Technology	154
5.1.3	FPGA Technology	155
5.2	FPGA-Based Switching Controller Design Techniques.	158
5.3	Modeling and Schematic Symbol Creation Using VHDL	163
5.3.1	Carrier Signal Generation Unit.	163
5.3.2	Reference Signal Generation Unit	165
5.3.3	Comparator Unit.	167
5.4	Model of Complete Switching Controller	173
5.5	Behavioral Simulation of Switching Controller.	174
5.6	Model Implementation	175
5.7	Design Verification	178
5.8	FPGA Programming.	181
5.9	Experimental Testing and Verifications	182
5.10	Summary	187
	References	187
6	Experimental Validation of 1-kV Modular Multilevel Cascaded Converter with High-Frequency Magnetic Link	189
6.1	Introduction	189
6.2	Development of High-Frequency Magnetic-Link MMC Converter. . .	194
6.2.1	Development of a 3-Phase 5-Level MMC Converter.	194
6.2.2	Design of Driver Circuit.	196
6.2.3	Development of High-Frequency Rectifiers with Fast Recovery Diodes.	199
6.2.4	Development of High-Frequency Inverter	203
6.2.5	Development of High-Frequency Magnetic Link	208
6.3	Experimental Testing and Performance Analysis.	209
6.4	Summary	224
	References	224
7	Design and Analysis of 11- and 33-kV Modular Multilevel Cascaded Converters	227
7.1	Introduction	227
7.1.1	Traditional Converters for Wind Power Generation Systems. . .	228
7.1.2	Traditional Converters for Solar PV Power Plants.	231
7.1.3	Power Transformers in Traditional Converter-Based Renewable Generation Systems	234
7.1.4	Medium-Voltage Converters for Direct Grid Integration . . .	240
7.2	Design and Analysis of 11-kV Converter Systems	242
7.2.1	Design and Analysis of 9-Level 11-kV Converter	243
7.2.2	Design and Analysis of 11-Level 11-kV Converter	246

7.2.3	Design and Analysis of 15-Level 11-kV Converter	248
7.2.4	Design and Analysis of 19-Level 11-kV Converter	250
7.2.5	Design and Analysis of 21-Level 11-kV Converter	254
7.2.6	Selection of Number of Levels for 11-kV Converter Systems	256
7.3	Design and Analysis of 33-kV Converter Systems	258
7.3.1	Design and Analysis of 15-Level 33-kV Converter	259
7.3.2	Design and Analysis of 23-Level 33-kV Converter	261
7.3.3	Design and Analysis of 29-Level 33-kV Converter	262
7.3.4	Design and Analysis of 43-Level 33-kV Converter	265
7.3.5	Design and Analysis of 55-Level 33-kV Converter	270
7.3.6	Selection of Optimal Number of Levels for 33-kV Converter	272
7.4	Summary	273
	References	273
8	Conclusions and Future Works	275
8.1	Introduction	275
8.2	Conclusions	276
8.3	Future Works	277

Power Converters for Medium Voltage Networks

Islam, M.R.; Guo, Y.; Zhu, J.

2014, XLI, 278 p. 356 illus., 70 illus. in color., Hardcover

ISBN: 978-3-662-44528-0
