1	Introductory Guide to Smart Biomaterials	1
	References	6
2	Smart Hydrogels	9
2.1	Introduction	9
2.2	Classification on the Basis of Preparation Methods	11
2.2.1	Physically Crosslinked Hydrogels	11
2.2.2	Chemically Crosslinked Hydrogels	16
2.3	Classification on the Basis of Stimuli	20
2.3.1	Physical Stimuli	20
2.3.2	Chemical Stimuli	25
2.4	Characterization Methods	28
2.4.1	Water in Hydrogels	28
2.4.2	Thermodynamics of Hydrogel Swelling	29
2.4.3	Swelling Ratios	29
2.4.4	Mechanical Properties	30
2.4.5	Rheology	32
2.4.6	Surface Properties	32
2.4.7	Other Techniques	33
2.5	Applications of Smart Hydrogels	33
2.5.1	‘On–Off’ Drug Delivery Systems	34
2.5.2	Injectable Hydrogels	38
2.5.3	Tissue Engineering	40
2.5.4	Actuators	42
2.5.5	Sensors	48
2.5.6	Self-Healing	50
2.6	Conclusions and Future Trends	52
	References	53
3	Smart Nanoassemblies and Nanoparticles	67
3.1	Introduction	67
3.2	Synthetic Methods	71
3.2.1	Controlled Living Radical Polymerizations	71
3.2.2	Click Chemistry	75

3.2.3	Self-Assembly	76
3.2.4	Precipitation Polymerization	77
3.2.5	Coacervation.	78
3.2.6	Incorporation of Inorganic Nanomaterials	79
3.3	Characterization Methods.	80
3.3.1	Determination of Particle Sizes and Zeta Potential	80
3.3.2	Microscopic Observations	81
3.3.3	Dynamic Observations of Conformational Changes	82
3.4	Multi-stimuli-Responsive ‘Smart’ Nanoassemblies and Nanoparticles.	85
3.4.1	Double-Temperature-Responsive Systems.	85
3.4.2	Multi-stimuli-Responsive Systems.	89
3.5	Applications of Smart Nanoassemblies and Nanoparticles	94
3.5.1	Targeted Drug Delivery	94
3.5.2	Biosensing and Bioimaging	97
3.5.3	Others	101
3.6	Conclusions and Future Trends	104
	References	104
4	Smart Surfaces	115
4.1	Introduction	115
4.2	Classification Based on Surface Modifications	118
4.2.1	Graft Architectures	118
4.2.2	Substrates/Materials	121
4.3	Synthetic Methods	124
4.3.1	Polymer Grafting Methods.	125
4.3.2	Micro- and Nanopatterning Processes	130
4.4	Characterization Methods.	133
4.4.1	Structural Characterization.	134
4.4.2	Phase Transition Analysis.	138
4.5	Applications of Smart Surfaces	144
4.5.1	Adsorption Control.	145
4.5.2	Cell Culture	149
4.5.3	Biomimetics	158
4.5.4	Chromatography.	162
4.5.5	Microfluidics	169
4.6	Conclusions and Future Trends	174
	References	175
5	Smart Nanofibers	189
5.1	Introduction	189
5.2	Classification of Fibers by Fabrication Methods	191
5.2.1	Self-assembly	191
5.2.2	Electrospinning.	193
5.2.3	Drawing	196

5.2.4	Phase Separation.	197
5.2.5	Microfluidic Devices	198
5.3	Characterization of Fibers	199
5.3.1	Morphologies	199
5.3.2	Mechanical Properties	202
5.3.3	Pore Size, Porosity and Surface Area.	202
5.4	Smart Fibers	205
5.4.1	Temperature-Responsive Fibers	205
5.4.2	Photoresponsive Fibers.	208
5.4.3	pH-Responsive Fibers	211
5.4.4	Electric-Field-Responsive Fibers	213
5.4.5	Magnetic-Field-Responsive Fibers.	214
5.4.6	Biomolecule-Responsive Fibers.	216
5.5	Applications of Smart Fibers	217
5.5.1	Sensors	218
5.5.2	Controlled Drug Delivery Systems	220
5.5.3	Cell Manipulations	224
5.5.4	Filters	226
5.6	Conclusions and Future Trends	229
	References	229
6	Smart Bioconjugates	237
6.1	Introduction	237
6.2	Classification on the Basis of Conjugation Routes	239
6.2.1	Random Conjugation	240
6.2.2	Site-Specific Conjugation.	242
6.2.3	Grafting from Protein-Reactive Initiators	244
6.2.4	Receptor-Ligand Conjugation	247
6.2.5	Smart Conjugations with Multiple Proteins.	249
6.2.6	Electrostatic Conjugation	251
6.2.7	Elastin-Like Polypeptides.	252
6.3	Characterization Methods.	252
6.3.1	Determination of Molecular Sizes	253
6.3.2	Determination of Conjugation	254
6.3.3	Structural Analysis	256
6.3.4	Determination of Transition-Point	256
6.3.5	Determination of Catalytic or Binding Activity Assay	258
6.3.6	Cytotoxicity Assay	259
6.4	Applications of Smart Bioconjugates.	260
6.4.1	Bioseparations and Immunoassays.	260
6.4.2	Molecular Switching	263
6.4.3	Drug/Gene Delivery	268
6.4.4	Diagnostic Technologies	273
6.5	Conclusions and Future Trends	276
	References	277

7 Shape-Memory Materials	285
7.1 Introduction	285
7.2 Classification on the Basis of Polymer Network Architecture	289
7.2.1 Physically Cross-Linked Glassy Networks (Type I Tswitch = Tg)	290
7.2.2 Physically Cross-Linked (Semi)Crystalline Networks (Type I Tswitch = Tm)	293
7.2.3 Covalently Cross-Linked Glassy Networks (Type II Tswitch = Tg)	296
7.2.4 Covalently Cross-Linked (Semi)Crystalline Networks (Type II Tswitch = Tm)	298
7.2.5 Shape-Memory Multiple Networks and Composites (Type III)	300
7.3 Synthetic Methods	302
7.3.1 Synthesis of SMPs as Building Blocks	302
7.3.2 Prepolymer Method (Type I Network)	304
7.3.3 Polymerization Method and Direct Cross-Linking of Linear SMPs (Type II Network)	306
7.3.4 Synthesis Techniques of SMP Composites (Solution/Melt Mixing and In Situ or Interactive Polymerization)	308
7.4 Characterization Methods	311
7.4.1 Mechanism of Thermally Induced SMPs	311
7.4.2 Thermal/Mechanical Properties	314
7.4.3 Structural Characterizations	317
7.4.4 Determination of Shape-Memory Ability	321
7.5 Applications of Shape-Memory Materials	329
7.5.1 Implantable SMP Devices	329
7.5.2 MEMS and Actuators	336
7.5.3 Bulk and Surface Shape Memory for Dynamic Regulation of Cell Functions	342
7.5.4 Novel Methods of Fabrication of SMPs	348
7.6 Conclusions and Future Trends	356
References	357
