

Contents

1	Environmental Systems and Analysis Methods	1
1.1	Environmental Systems	1
1.2	Structure of This Book	3
2	Linear Systems Analysis Methods	5
2.1	Unsteady-State Heat Transfer Equation	5
2.2	What is Discretization	9
2.3	Space Discretization Based on Control Volume Method	10
2.4	System State Equations	14
2.5	Time Discretization	17
2.6	Stability of Numerical Solutions	20
2.7	Fluctuations in the Numerical Solutions	25
2.8	von Neumann Stability Analysis	27
2.9	Heat System Applications	31
2.10	Linearization of Radiant Heat Transfer	37
2.11	Linear Heat Moisture Transfer Equation	41
2.12	Calculations of Heat Load and Natural Room Temperature	48
2.13	Numerical Simulation of a Single Room Model	54
2.14	Finite Element Method	69
2.15	End of Chapter Examples	78
3	Applications of Vector Matrix Operations	89
3.1	Linear Multi Regression Analysis	89
3.2	Least Square Solution	91
3.3	Application of Least Squares Solution	96

4 Dynamics of Non-Linear Systems	105
4.1 Linear Dynamical Systems	105
4.2 Non-Linear Dynamical Systems	108
4.3 2-Player 2-Strategy Evolutionary Game	110
4.4 Dynamics Analysis of the Two-by-Two Game	117
References	123
Biography of the Author	125
Index	127

Mathematical Analysis of Environmental System

Tanimoto, J.

2014, X, 128 p. 94 illus., 84 illus. in color., Softcover

ISBN: 978-4-431-54621-4
