## Part I Fundamental Theory

<b>1</b>	<b>Overview of the Operating Principles of Lasers</b> . . . . .	3
1.1	Optical Emission . . . . .	3
1.2	Coherent Light . . . . .	6
1.3	Fundamental Structure of Laser . . . . .	7
1.4	Typical Structure of Semiconductor Laser . . . . .	10
1.5	Material. . . . .	11
1.6	Injection Mechanism. . . . .	12
1.7	Output Light . . . . .	12
1.8	Lasing Mode . . . . .	14
	Bibliography . . . . .	15
<b>2</b>	<b>The Photon</b> . . . . .	17
2.1	Analytical Approaches . . . . .	17
2.2	Principles of Classical Mechanics. . . . .	18
2.3	Principles of Quantum Mechanics . . . . .	22
2.4	Procedure for Quantization . . . . .	23
2.5	Classical Form of Maxwell's Equations . . . . .	24
2.6	Obtaining Quantum Mechanical Operators from Classical Physical Quantities . . . . .	26
2.7	Quantization of the Optical Wave. . . . .	27
2.8	Remark on the Photon. . . . .	28
2.9	The Uncertainty Principle . . . . .	29
2.10	Coherent State . . . . .	31
2.11	Interaction Between the Optical Wave and a Charged Particle . . . . .	32
2.12	Analysis of Electron Transition Using a Fully Quantized Treatment. . . . .	34
<b>3</b>	<b>Laser Oscillation</b> . . . . .	35
3.1	Representation of Optical Amplification with Laser Polarization . . . . .	35

3.2	Conditions for Laser Oscillation in Traveling Wave Model . . .	38
3.3	Amplification and Lasing Conditions in Standing Wave Model . . . . .	41
3.4	Note on Laser Oscillation . . . . .	45
3.5	Modal Power and Optical Spectrum . . . . .	47
<b>4</b>	<b>Waveguides . . . . .</b>	<b>49</b>
4.1	Method to Analyze Two-Dimensional Cross-Section. . . . .	49
4.2	Guiding Modes Taking into Account Gain and Loss. . . . .	53
4.3	Stripe Structures. . . . .	63
	Bibliography . . . . .	64
<b>5</b>	<b>Density Matrix of a Semiconductor Material. . . . .</b>	<b>65</b>
5.1	Quantum Statistics . . . . .	65
5.2	Dynamic Equation of the Density Matrix . . . . .	67
5.3	Energy State in Semiconductor Material . . . . .	68
5.4	Interaction Hamiltonian. . . . .	69
5.5	Dipole Moment . . . . .	71
5.6	Additional Phenomena . . . . .	73
5.7	Intraband Relaxation. . . . .	76
	Bibliography . . . . .	79
<b>6</b>	<b>Gain Coefficient and Rate Equation . . . . .</b>	<b>81</b>
6.1	Laser Polarization. . . . .	81
6.2	Amplification Mechanism . . . . .	84
6.3	Representation by Continuous Energy Levels in Semiconductor Material. . . . .	87
6.4	Deviation of Refractive Index . . . . .	94
6.5	Plasma Effect. . . . .	96
6.6	Rate Equation for the Electron Density . . . . .	96
6.7	Spontaneous Emission and Electron Life Time . . . . .	98
6.8	Rate Equation for the Photon Number Including Spontaneous Emission. . . . .	103
	Bibliography . . . . .	104
<b>7</b>	<b>Typical Operating Characteristics. . . . .</b>	<b>105</b>
7.1	Threshold Current. . . . .	105
7.2	Quantum Efficiency . . . . .	106
7.3	Direct Modulation . . . . .	110
	Bibliography . . . . .	112

## Part II Advanced Theory for Mode Competition and Noise

<b>8</b>	<b>Nonlinear Gain</b> . . . . .	115
8.1	Redefinition of the Gain Coefficient . . . . .	115
8.2	Perturbation Expansion of Density Matrix . . . . .	117
8.3	Nonlinear Polarization and Gain Coefficient . . . . .	122
8.4	Effect from Higher Order Transverse Mode . . . . .	128
8.5	Variation of Electron Density . . . . .	130
8.6	Frequency Beating of the Injected Electron Density with Lasing Modes . . . . .	133
8.7	Asymmetric Gain Saturation Coefficient . . . . .	135
8.8	Relation Among Nonlinear Gain Coefficients . . . . .	139
8.9	Improved Rate Equations . . . . .	141
	Bibliography . . . . .	142
<b>9</b>	<b>Mode Competition</b> . . . . .	143
9.1	Two Modes Competition with Symmetric Gain Saturation . . . . .	143
9.2	Mode Competition with Asymmetric Gain Saturation . . . . .	147
9.3	Single Mode Operation by Help of Mode Selective Cavity . . . . .	153
	Bibliography . . . . .	155
<b>10</b>	<b>Noise</b> . . . . .	157
10.1	Classification of Noise . . . . .	157
10.2	Introduction of the Noise Sources . . . . .	159
10.2.1	Noise Sources for Photon Number and Electric Phase . . . . .	159
10.2.2	Noise Source for the Electron Density . . . . .	163
10.3	Frequency Components of Noise Sources . . . . .	164
10.4	Noise Analysis Under Stable Single Mode Operation . . . . .	165
10.4.1	Using Equations . . . . .	165
10.4.2	Intensity Noise . . . . .	166
10.4.3	Frequency Noise and Spectrum Linewidth . . . . .	171
10.5	Mode Competition Noise . . . . .	173
10.5.1	Mode Competition due to Symmetric Gain Saturation . . . . .	173
10.5.2	Mode Competition Including Asymmetric Gain Saturation . . . . .	177
10.6	Optical Feedback Noise . . . . .	180
10.6.1	Model of Optical Feedback . . . . .	180
10.6.2	Calculated Examples . . . . .	183
10.6.3	Mechanism of Noise Generation . . . . .	184
10.7	Noise Reduction . . . . .	188
10.7.1	Superposition of High Frequency Current . . . . .	188
10.7.2	Use of Self-Pulsation Lasers . . . . .	192

10.7.3	Electric Negative Feedback . . . . .	192
10.7.4	Hybrid Usage of the Noise Reduction Methods . . . . .	194
	Bibliography . . . . .	196

### **Part III Structures for Superior Characteristics in the Semiconductor Lasers**

<b>11</b>	<b>Quantum Well Structure . . . . .</b>	<b>199</b>
11.1	What is a Quantum Well? . . . . .	199
11.2	Advantage of Using Quantum Well Structures . . . . .	202
11.3	Various Types of Quantum Well Structure . . . . .	203
11.4	Polarization Dependent Gain . . . . .	205
11.4.1	Dipole Moment . . . . .	205
11.4.2	Dipole Moment in Bulk Material . . . . .	207
11.4.3	Dipole Moment in the Quantum Well Laser . . . . .	208
11.4.4	Lasing Gain . . . . .	209
11.5	Strained Quantum Well . . . . .	211
11.6	Quantum Well Structures with Higher Dimension . . . . .	215
	Bibliography . . . . .	217
<b>12</b>	<b>Distributed Feedback and Mode Selective Lasers. . . . .</b>	<b>219</b>
12.1	Distributed Feedback Laser . . . . .	219
12.1.1	Model of Analysis . . . . .	219
12.1.2	Coupled Wave Equations . . . . .	221
12.1.3	Oscillation Condition . . . . .	223
12.1.4	Deriving the Oscillation Condition for a Fabry–Perot Cavity Laser . . . . .	224
12.1.5	Deriving the Oscillation Condition for a Long Nonreflecting Cavity. . . . .	225
12.1.6	Calculated Example of the Threshold Gain . . . . .	226
12.1.7	A DFB Laser with a $\lambda/4$ Phase Shift Structure . . . . .	226
12.2	Distributed Bragg Reflector Laser . . . . .	228
12.3	Wavelength Tunable Laser . . . . .	230
12.4	Various Structures for Mode Selective Laser . . . . .	232
	Bibliography . . . . .	233
<b>13</b>	<b>Surface Emitting Lasers . . . . .</b>	<b>235</b>
13.1	Fundamental Configuration and Oscillation Condition. . . . .	235
13.2	Examples of Fabricated Structures . . . . .	238
	Bibliography . . . . .	239

**Appendix 1: Derivations of the Annihilation and Creation Operators. . . . .** 241

**Appendix 2: Proof of the Uncertainty Principle . . . . .** 245

**Appendix 3: Classical Hamiltonian Dynamics for a Charged Particle in an Electromagnetic Field . . . . .** 247

**Appendix 4: Derivation of the Classical Lorentz Force from the Quantum Mechanical Schrödinger Equation. . . . .** 249

**Appendix 5: Analysis of Electron Transition Probability Based on the Fully Quantized Treatment. . . . .** 255

**Appendix 6: Identity Operator . . . . .** 263

**Appendix 7: Dynamic Motion of a Classical Dipole . . . . .** 265

**Appendix 8: Kramers–Kronig Relation . . . . .** 269

**Appendix 9: Classical Analysis of Plasma Effect . . . . .** 273

**Appendix 10: Amplified Spontaneous Emission . . . . .** 277

**Appendix 11: Spectrum of Correlated Value . . . . .** 285

**Appendix 12: Calculating Procedure of the Mode Gain for MQW Structures . . . . .** 289

**Index . . . . .** 297

Theory of Semiconductor Lasers  
From Basis of Quantum Electronics to Analyses of the  
Mode Competition Phenomena and Noise
