

Contents

1	General Introduction	1
1.1	Alternative Energy	1
1.2	The Issues of Hydrogen Utilization as an Alternative Energy Source	2
1.3	The Advantages in Solid Solution Alloy	7
1.4	The Possibility of Metal Nanoparticles as Advanced Materials.	9
1.5	The Structure of This Thesis	13
	References	13
2	Hydrogen Storage Properties of Solid Solution Alloys of Immiscible Neighboring Elements with Pd	17
2.1	Introduction	17
2.2	Experiment	18
2.2.1	Syntheses of $\text{Ag}_x\text{Rh}_{1-x}$ Nanoparticles.	18
2.2.2	Characterizations	18
2.3	Results and Discussion.	20
2.4	Conclusion	25
	References	26
3	Systematic Study of the Hydrogen Storage Properties and the CO-oxidizing Abilities of Solid Solution Alloy Nanoparticles in an Immiscible Pd–Ru System	29
3.1	Introduction	29
3.2	Experiment	30
3.2.1	Syntheses	30
3.2.2	Catalysts Preparation	31
3.2.3	Characterizations	32
3.3	Results and Discussion.	33
3.4	Conclusion	54
	References	55

4	Discovery of the Face-Centered Cubic Ruthenium Nanoparticles: Facile Size-Controlled Synthesis Using the Chemical Reduction Method.	59
4.1	Introduction	59
4.2	Experiment	60
4.2.1	Syntheses of Ru Nanoparticles.	60
4.2.2	Catalysts Preparation	60
4.2.3	Characterizations	61
4.3	Results and Discussion.	62
4.4	Conclusion	65
	References	66
5	Changeover of the Thermodynamic Behavior for Hydrogen Storage in Rh with Increasing Nanoparticle Size.	69
5.1	Introduction	69
5.2	Experiment	70
5.2.1	Synthesis of Rh Nanoparticles Having a Diameter of ~10 nm	70
5.2.2	Characterizations	70
5.3	Results and Discussion.	71
5.4	Conclusion	74
	References	75
	Curriculum Vitae	77

Creation of New Metal Nanoparticles and Their
Hydrogen-Storage and Catalytic Properties

Kusada, K.

2014, XII, 78 p. 59 illus., 23 illus. in color., Hardcover

ISBN: 978-4-431-55086-0
