

Contents

1	Topological Considerations	1
1.1	Some Terminology and Concepts Related to Chaotic Dynamics	1
1.2	Entropy Related to Maps	2
1.2.1	Topological Entropy	2
1.3	Chaos Versus Complexity	4
1.4	Lyapunov Exponents	6
1.5	Randomness Versus Chaotic Behavior	7
1.6	Some Prevalent Definitions of Chaos	8
1.6.1	Li–Yorke Chaos	8
1.7	Bernoulli Shift	10
1.8	The Logistic Equation	12
1.9	The Horseshoe Map of Smale	17
1.10	The “Crossing” Property	19
1.11	Stretching Along Paths	21
1.12	Linked Twist Maps	21
1.12.1	An Example of a Linked Twist Map from the Classical Pendulum	23
	References	26
2	Topological Horseshoes and Coin-Tossing Dynamics	29
2.1	Chaos in the “Coin-Tossing” Sense	29
2.2	Topological Lemmas and Definitions	33
2.3	The Concept of “Stretching” as Related to Chaos	37
2.4	Oriented Rectangles	38
2.5	Stretching Along Paths	39
2.6	The Crossing Number	42
2.7	An Example of Oriented Rectangles with Reference to the Nonlinear Pendulum Equation	42

2.8	Chaotic Dynamics Induced by the Stretching Property	46
2.9	Applications of the Concept of “Stretching Along Paths” to Some Pendulum Type Equations	51
2.9.1	The Vertically Driven Planar Pendulum	51
2.9.2	A Pendulum with Variable Length	52
	References	52
3	Chaotic Dynamics in the Vertically Driven Planar Pendulum	55
3.1	Introduction and Statement of the Main Results	55
3.2	Chaos in Pendulum-Like Equations	58
3.3	Technical Lemmas Related to the Construction of Linked Annuli	65
3.4	Proof of the Main Results	73
	References	77
4	Chaos in a Pendulum with Variable Length	79
4.1	A Conservative System	79
4.2	A Graphical Description Choosing a Particular Value of $f(x)$	82
4.3	Technical Preliminaries	87
4.4	Proof of the Existence of Chaotic Dynamics	96
4.4.1	Construction of the Oriented Rectangles	96
4.4.2	Proof of Theorem 4.1	98
	References	101
	Index	103

Chaotic Dynamics in Nonlinear Theory

Burra, L.

2014, XIX, 104 p. 48 illus., 32 illus. in color., Hardcover

ISBN: 978-81-322-2091-6
