<b>1</b>	<b>The Real Numbers</b>	<b>1</b>
1.1	Preliminaries of Set Theory	2
1.2	An Abstract Overview of the Real Number System	6
1.3	A First Encounter with the Exponential Function	18
1.4	The Archimedean Property	21
1.5	The Decimal Representation	25
1.6	Countable Sets. Uncountable Sets	28
1.7	The Cardinality of $\mathbb{R}$	32
1.8	Notes and Remarks	35
	References	37
<b>2</b>	<b>Limits of Real Sequences</b>	<b>39</b>
2.1	Convergent Sequences	39
2.2	Monotone Convergence Theorem	45
2.3	The Number $e$	48
2.4	The Cauchy Completeness of $\mathbb{R}$	52
2.5	The Extended Real Number System	53
2.6	Limit Inferior and Limit Superior of a Sequence	56
2.7	The Stolz–Cesàro Theorem	59
2.8	Notes and Remarks	62
	References	65
<b>3</b>	<b>The Euclidean Spaces <math>\mathbb{R}^p</math> and <math>\mathbb{C}</math></b>	<b>67</b>
3.1	$p$ -Dimensional Space	67
3.2	Convergence and Completeness in $\mathbb{R}^p$	71
3.3	The Complex Field	74
3.4	Convergence and Completeness in $\mathbb{C}$	78
3.5	Normed Linear Spaces	80
3.6	Notes and Remarks	82
	Reference	83

<b>4</b>	<b>Numerical Series</b> . . . . .	85
4.1	Convergent Series . . . . .	85
4.2	Series of Nonnegative Numbers . . . . .	91
4.3	Abel–Dirichlet Test and Its Consequences . . . . .	98
4.4	Unconditionally Convergent Series . . . . .	103
4.5	Notes and Remarks . . . . .	106
	References . . . . .	109
<b>5</b>	<b>Metric and Topology</b> . . . . .	111
5.1	Metric Spaces . . . . .	111
5.2	The Topology of a Metric Space . . . . .	114
5.3	Convergence in Metric Spaces . . . . .	120
5.4	Closed Sets and Points of Accumulation . . . . .	123
5.5	Compact Sets . . . . .	125
5.6	Baire Category . . . . .	131
5.7	Notes and Remarks . . . . .	133
	References . . . . .	138
<b>6</b>	<b>Continuous Functions</b> . . . . .	139
6.1	The Notion of Continuity . . . . .	139
6.2	Limits of Functions . . . . .	145
6.3	Discontinuities of a Function of Real Variable . . . . .	149
6.4	The Intermediate Value Theorem . . . . .	152
6.5	Continuous Functions on Compact Intervals . . . . .	157
6.6	Continuous Functions on Metric Spaces . . . . .	160
6.7	The Universal Surjectivity of Cantor’s Triadic Set . . . . .	165
6.8	Sequences and Series of Continuous Functions . . . . .	169
6.9	The Banach Spaces $C_b(M)$ and $C(K)$ . . . . .	174
6.10	The Fundamental Theorem of Algebra . . . . .	176
6.11	Notes and Remarks . . . . .	180
	References . . . . .	183
<b>7</b>	<b>Elementary Functions</b> . . . . .	185
7.1	The Exponential . . . . .	185
7.2	The Logarithm and the Power Function . . . . .	191
7.3	Power Series . . . . .	196
7.4	The Exponential and the Trigonometric Functions . . . . .	201
7.5	Notes and Remarks . . . . .	212
	References . . . . .	214
<b>8</b>	<b>Differential Calculus on <math>\mathbb{R}</math></b> . . . . .	215
8.1	Differentiable Functions . . . . .	216
8.2	The Monotone Function Theorem . . . . .	224
8.3	The Basic Theorems of Differential Calculus . . . . .	228

8.4	Taylor's Formula . . . . .	234
8.5	Taylor Series Expansion of a Function . . . . .	239
8.6	The Differentiation of Power Series. . . . .	244
8.7	Bernoulli Numbers and Polynomials . . . . .	249
8.8	The Weierstrass Approximation Theorems . . . . .	256
8.9	Convex Functions. . . . .	260
8.10	The Extrema of Convex Functions . . . . .	269
8.11	Nowhere Differentiable Continuous Functions . . . . .	271
8.12	Notes and Remarks . . . . .	273
	References. . . . .	280
<b>9</b>	<b>The Riemann Integral.</b> . . . .	<b>281</b>
9.1	The Integral of Regular Functions. . . . .	281
9.2	The Fundamental Theorem of Calculus . . . . .	290
9.3	Mean Value Theorems. . . . .	302
9.4	Dependence of Parameters . . . . .	307
9.5	The Riemann Integral . . . . .	312
9.6	Lebesgue's Criterion of Integrability . . . . .	322
9.7	The Proof of Lebesgue's Criterion . . . . .	324
9.8	Weyl's Ergodic Theorem. . . . .	327
9.9	Notes and Remarks . . . . .	331
	References. . . . .	335
<b>10</b>	<b>Improper Riemann Integrals.</b> . . . .	<b>337</b>
10.1	Some Basic Facts . . . . .	337
10.2	The Euler–Maclaurin Formula . . . . .	346
10.3	The Gamma and Beta Functions. . . . .	352
10.4	Notes and Remarks. . . . .	360
	References. . . . .	361
<b>11</b>	<b>The Theory of Lebesgue Integral.</b> . . . .	<b>363</b>
11.1	The Measure of Elementary Sets. . . . .	363
11.2	The Integral of Step Functions . . . . .	368
11.3	Lebesgue Integrable Functions . . . . .	372
11.4	Proof of Technical Lemmas 11.3.2 and 11.3.3 . . . . .	383
11.5	Integral of Measurable Functions . . . . .	386
11.6	The Lebesgue Measure . . . . .	396
11.7	Dependence on Parameters. . . . .	400
11.8	The Lebesgue Spaces $\mathcal{L}^p(A)$ and $L^p(A)$ . . . . .	408
11.9	The Fourier Transform . . . . .	415
11.10	Applications of Fourier Transforms. . . . .	425
11.11	Notes and Remarks. . . . .	431
	References. . . . .	435

<b>12</b>	<b>Fourier Series</b> . . . . .	437
12.1	Hilbert Spaces: Orthogonal Expansions . . . . .	437
12.2	Pointwise Convergence of Fourier Series . . . . .	450
12.3	The Motion of Vibrating String . . . . .	457
12.4	Notes and Remarks . . . . .	463
	References . . . . .	465
	<b>Appendix A: An Introduction to One-Dimensional Dynamics</b> . . . . .	467
	<b>Appendix B: Special Topics on Differentiability</b> . . . . .	481
	<b>Appendix C: The Riemann–Stieltjes Integral</b> . . . . .	505
	<b>Symbols</b> . . . . .	517
	<b>Index</b> . . . . .	519

Real Analysis on Intervals

Choudary, A.D.R.; Niculescu, C.

2014, XI, 525 p. 36 illus., Hardcover

ISBN: 978-81-322-2147-0
