

# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
<b>2</b>	<b>Fundamentals of X-Ray Diffraction and X-Ray Interferometry</b>	<b>7</b>
2.1	Basic Elements of Crystallography	8
2.1.1	Lattices and Cells	8
2.1.2	Lattice Configurations	12
2.1.3	Lattice Directions, Planes and Miller Indices	14
2.1.4	Bragg's Law	23
2.1.5	Lattice Functions and Reciprocal Lattices	25
2.1.6	Construction of the Ewald Sphere	34
2.2	Scattering by Ideal Crystals	37
2.2.1	Influence of the Electric Field $\mathbf{E}$ on Matter	38
2.2.1.1	The Potential at a Point of a Discrete and Continuous Distributions of Charges	40
2.2.1.2	The Field of a Polarized Object	45
2.2.1.3	The Electrostatic Equations with Dielectrics	49
2.2.1.4	Boundary Conditions on $\mathbf{D}$ and $\mathbf{E}$	50
2.2.1.5	Calculation of Electric Susceptibility	53
2.2.2	Radiation from a Group of Accelerated Charges	57
2.2.2.1	Special Case of an Accelerated Electron	64
2.2.2.2	Atomic Scattering Factor and Structure Factor of the Crystal	66
2.3	Takagi-Taupin Equations	75
2.3.1	Maxwell-Laue Wave Equations	75
2.3.2	Ewald Expansion of Wave Fields	78
2.3.3	Approximate Solutions of System	83
2.3.3.1	One-Wave Approximation	83
2.3.3.2	Two-Wave Approximation	85
2.4	X-Ray Interferometry	92
2.4.1	Splitter and Mirror	94
2.4.2	Laboratory Reference Frame and Crystal Reference Frame	96

2.4.3	Two-Beam Case . . . . .	98
2.4.4	X-Ray Fringes . . . . .	102
<b>3</b>	<b>Linear Elasticity and Anisotropy . . . . .</b>	<b>109</b>
3.1	Analysis of Stress . . . . .	111
3.1.1	Continuum Hypothesis . . . . .	111
3.1.2	Cauchy's Principle, the Traction Vector . . . . .	111
3.1.3	Cauchy's Theorem, the Stress Tensor . . . . .	114
3.1.4	Transformation of the Coefficients $\sigma_{ij}$ . . . . .	115
3.1.5	Force and Momentum . . . . .	117
3.1.5.1	Force Equilibrium . . . . .	117
3.1.5.2	Moment Equilibrium . . . . .	118
3.2	Displacements and Strain . . . . .	120
3.2.1	Description of the Motion of a Continuum . . . . .	123
3.2.2	Relative Displacements, Deformation Gradient and Strain Tensor . . . . .	125
3.2.3	Is $\varepsilon$ a Tensor? . . . . .	128
3.2.4	Other Notations for the Strain Components . . . . .	129
3.2.5	Interpretation of the Infinitesimal Strain Components . . . . .	130
3.2.5.1	Diagonal Elements . . . . .	130
3.2.5.2	Off-Diagonal Elements . . . . .	130
3.3	Generalized Hooke's Law . . . . .	131
3.3.1	Elastic Coefficients in Crystals . . . . .	135
3.3.1.1	Effect of a Binary Axis of Symmetry . . . . .	135
3.3.2	Transformation of $c_{ijkl}$ and $s_{ijkl}$ . . . . .	140
3.3.2.1	A Practical Example: Silicon Crystal . . . . .	144
3.3.2.2	Surface Representing the Variation of Young's Modulus with the Change of Direction . . . . .	146
3.3.2.3	Optimal Crystal Orientation in the X-Ray Interferometer . . . . .	147
3.4	Equations of Equilibrium in Terms of Displacement Components . . . . .	148
3.4.1	Analytical Solution of Equilibrium Equations . . . . .	149
<b>4</b>	<b>Propagation of Thermal Energy . . . . .</b>	<b>161</b>
4.1	Derivation of the Equation of the Propagation of Thermal Energy . . . . .	162
4.1.1	Boundary and Initial Conditions . . . . .	167
4.2	Methods of Solution . . . . .	168
4.2.1	Method of Separation of Variables . . . . .	169
4.2.1.1	Homogeneous PDE with Homogeneous Boundary Conditions of First Type . . . . .	170
4.2.1.2	Homogeneous PDE with Non-homogeneous Boundary Conditions of Third Type . . . . .	174
4.2.1.3	Homogeneous PDE with Time-Varying and Conditions of the First Type . . . . .	178
4.2.1.4	Non-homogeneous PDE with Homogeneous Boundary Conditions . . . . .	179

4.2.1.5	Homogeneous PDE with Non-homogeneous Boundary Conditions of Third Type Dependent on Time . . . . .	181
4.2.2	Numerical Methods . . . . .	189
4.2.2.1	Finite Differences Approximations . . . . .	189
4.2.2.2	Elements of Method of Lines . . . . .	196
<b>5</b>	<b>Anti-vibration Mounting System . . . . .</b>	<b>199</b>
5.1	Elements of a Vibratory System . . . . .	201
5.1.1	Equivalence of Systems . . . . .	202
5.2	Systems with a Single Degree of Freedom . . . . .	203
5.2.1	Free Vibrations Without Damping . . . . .	205
5.2.2	Free Vibrations with Damping . . . . .	207
5.2.2.1	Undamped System ( $\zeta = 0$ or $c = 0$ ) . . . . .	209
5.2.2.2	Underdamped System ( $\zeta < 1$ or $c < C_c$ ) . . . . .	209
5.2.2.3	Critically Damped System ( $\zeta = 1$ or $c = C_c$ ) . . . . .	210
5.2.2.4	Overdamped System ( $\zeta > 1$ or $c > C_c$ ) . . . . .	211
5.2.2.5	Logarithmic Decrement . . . . .	212
5.2.3	Forced Vibrations . . . . .	213
5.2.3.1	Driving Force Applied Directly to the Mass $m$ . . . . .	214
5.2.3.2	Influence of Ground Motion . . . . .	216
5.2.3.3	Complex Vector Representation of Harmonic Motion . . . . .	219
5.3	Systems with Two Degrees of Freedom . . . . .	220
5.3.1	Two Masses and Three Springs . . . . .	221
5.3.1.1	Newton's Method . . . . .	221
5.3.1.2	Lagrange's Method . . . . .	222
5.3.1.3	Free Vibrations Analysis . . . . .	223
5.3.1.4	Natural Frequencies and Modes of a Simple Two-Degree-of-Freedom System . . . . .	227
5.3.2	Motion of One Platform with Two Degrees of Freedom . . . . .	231
5.4	Dynamic Response of an Anti-vibration Mounting . . . . .	235
<b>6</b>	<b>Data Analysis and Interpolation with B-Splines . . . . .</b>	<b>247</b>
6.1	Why Splines? . . . . .	250
6.2	One-Dimensional Cubic Splines . . . . .	250
6.3	One-Dimensional Cubic B-Splines . . . . .	257
6.3.1	Uniform Cubic B-Splines . . . . .	258
6.4	Splines and B-Splines of Order $n$ . . . . .	263
6.4.1	Data Interpolation . . . . .	265
6.4.1.1	Collapsing Knots . . . . .	267
6.4.1.2	Choosing the Knots Sequence . . . . .	268
6.4.1.3	The Interpolating Spline . . . . .	270
6.5	Two-Dimensional B-Splines . . . . .	271
6.6	Determination of the Volume of a Spheroid . . . . .	274
6.6.1	Volume Uncertainty Estimate . . . . .	275

<b>Appendix A</b>	<b>Ontic Profile of <math>N_A</math></b>	277
<b>Appendix B</b>	<b>Calculation of the Coefficients <math>\rho_g</math> and <math>\rho_{hkl}</math></b>	279
<b>Appendix C</b>	<b>Cell Volume in Direct and Reciprocal Space</b>	281
<b>Appendix D</b>	<b>Interplanar Spacing <math>d_{hkl}</math></b>	283
<b>Appendix E</b>	<b>Displacement of an Electron Cloud</b>	285
<b>Appendix F</b>	<b>Symmetries of <math>\chi_g</math></b>	289
<b>Appendix G</b>	<b>How to Exploit the Laplacian Operator</b>	291
<b>Appendix H</b>	<b>Product of Infinite Series</b>	293
<b>Appendix I</b>	<b>How to Expand the <math>\nabla \times (\nabla \times \bullet)</math> Operator</b>	295
<b>Appendix J</b>	<b>Cylindrical Wave</b>	297
<b>Appendix K</b>	<b>Transformation from <math>d_0(x, z)</math> to <math>\tilde{d}_0(x, z)</math></b>	299
<b>Appendix L</b>	<b>Cosinusoidal X-Ray Fringes</b>	301
<b>Appendix M</b>	<b>Example About Deformation Gradient <math>\nabla[\mathbf{u}]</math></b>	303
<b>Appendix N</b>	<b>The Symmetry Properties <math>c_{ijkl} = c_{jikl} = c_{ijlk} = c_{klij}</math> and the Concept of Strain Energy Density</b>	307
<b>Appendix O</b>	<b>Synchronous Motion</b>	313
<b>Appendix P</b>	<b>Number of Atoms in a 1 kg Mono-isotopic Silicon Sphere</b>	317
<b>Appendix Q</b>	<b>About Collapsing Nodes</b>	319
