# Contents

<b>1</b>	<b>A brief survey of partial differential equations</b>	<b>1</b>
1.1	Definitions and examples	1
1.2	Numerical solution	3
1.3	PDE Classification	5
1.3.1	Quadratic form associated to a PDE	8
1.4	Exercises	9
<b>2</b>	<b>Elements of functional analysis</b>	<b>11</b>
2.1	Functionals and bilinear forms	11
2.2	Differentiation in linear spaces	13
2.3	Elements of distributions	15
2.3.1	Square-integrable functions	17
2.3.2	Differentiation in the sense of distributions	18
2.4	Sobolev spaces	20
2.4.1	Regularity of the spaces $H^k(\Omega)$	21
2.4.2	The space $H_0^1(\Omega)$	22
2.4.3	Trace operators	23
2.5	The spaces $L^\infty(\Omega)$ and $L^p(\Omega)$ , with $1 \leq p < \infty$	24
2.6	Adjoint operators of a linear operator	26
2.7	Spaces of time-dependent functions	27
2.8	Exercises	29
<b>3</b>	<b>Elliptic equations</b>	<b>31</b>
3.1	An elliptic problem example: the Poisson equation	31
3.2	The Poisson problem in the one-dimensional case	32
3.2.1	Homogeneous Dirichlet problem	33
3.2.2	Non-homogeneous Dirichlet problem	39
3.2.3	Neumann Problem	39
3.2.4	Mixed homogeneous problem	40
3.2.5	Mixed (or Robin) boundary conditions	40
3.3	The Poisson problem in the two-dimensional case	41

3.3.1	The homogeneous Dirichlet problem	41
3.3.2	Equivalence, in the sense of distributions, between weak and strong form of the Dirichlet problem	43
3.3.3	The problem with mixed, non homogeneous conditions	44
3.3.4	Equivalence, in the sense of distributions, between weak and strong form of the Neumann problem	47
3.4	More general elliptic problems	48
3.4.1	Existence and uniqueness theorem	50
3.5	Adjoint operator and adjoint problem	51
3.5.1	The nonlinear case	55
3.6	Exercises	56
<b>4</b>	<b>The Galerkin finite element method for elliptic problems</b>	<b>61</b>
4.1	Approximation via the Galerkin method	61
4.2	Analysis of the Galerkin method	63
4.2.1	Existence and uniqueness	63
4.2.2	Stability	64
4.2.3	Convergence	64
4.3	The finite element method in the one-dimensional case	67
4.3.1	The space $X_h^1$	67
4.3.2	The space $X_h^2$	69
4.3.3	The approximation with linear finite elements	71
4.3.4	Interpolation operator and interpolation error	73
4.3.5	Estimate of the finite element error in the $H^1$	75
4.4	Finite elements, simplices and barycentric coordinates	76
4.4.1	An abstract definition of finite element in the Lagrangian case	76
4.4.2	Simplexes	78
4.4.3	Barycentric coordinates	78
4.5	The finite element method in the multi-dimensional case	80
4.5.1	Finite element solution of the Poisson problem	82
4.5.2	Conditioning of the stiffness matrix	85
4.5.3	Estimate of the approximation error in the energy norm	88
4.5.4	Estimate of the approximation error in the $L^2$ norm	95
4.6	Grid adaptivity	98
4.6.1	A priori adaptivity based on derivatives reconstruction	100
4.6.2	A posteriori adaptivity	103
4.6.3	Numerical examples of adaptivity	107
4.6.4	A posteriori error estimates in the $L^2$ norm	111
4.6.5	A posteriori estimates of a functional of the error	112
4.7	Exercises	114

<b>5</b>	<b>Parabolic equations</b>	121
5.1	Weak formulation and its approximation	122
5.2	A priori estimates	125
5.3	Convergence analysis of the semi-discrete problem	128
5.4	Stability analysis of the $\theta$ -method	132
5.5	Convergence analysis of the $\theta$ -method	135
5.6	Exercises	138
<b>6</b>	<b>Generation of 1D and 2D grids</b>	141
6.1	Grid generation in 1D	141
6.2	Grid of a polygonal domain	144
6.3	Generation of structured grids	146
6.4	Generation of non-structured grids	149
6.4.1	Delaunay triangulation	149
6.4.2	Advancing front technique	153
6.5	Regularization techniques	155
6.5.1	Diagonal swap	156
6.5.2	Node displacement	157
<b>7</b>	<b>Algorithms for the solution of linear systems</b>	161
7.1	Direct methods	161
7.2	Iterative methods	164
7.2.1	Classical iterative methods	164
7.2.2	Gradient and conjugate gradient methods	167
7.2.3	Krylov subspace methods	169
7.2.4	The Multigrid method	175
<b>8</b>	<b>Elements of finite element programming</b>	179
8.1	Working steps of a finite element code	179
8.1.1	The code in a nutshell	182
8.2	Numerical computation of integrals	183
8.2.1	Numerical integration using barycentric coordinates	185
8.3	Storage of sparse matrices	187
8.4	Assembly	189
8.4.1	Coding geometrical information	191
8.4.2	Coding of functional information	192
8.4.3	Mapping between reference and physical element	193
8.4.4	Construction of local and global systems	198
8.4.5	Boundary conditions prescription	201
8.5	Integration in time	203
8.6	A complete example	206
<b>9</b>	<b>The finite volume method</b>	213
9.1	Some basic principles	214
9.2	Construction of control volumes for vertex-centered schemes	216

9.3	Discretization of a diffusion-transport-reaction problem	219
9.4	Analysis of the finite volume approximation	221
9.5	Implementation of boundary conditions	222
<b>10</b>	<b>Spectral methods</b>	<b>225</b>
10.1	The spectral Galerkin method for elliptic problems	225
10.2	Orthogonal polynomials and Gaussian numerical integration	229
10.2.1	Orthogonal Legendre polynomials	229
10.2.2	Gaussian integration	232
10.2.3	Gauss-Legendre-Lobatto formulae	233
10.3	G-NI methods in one dimension	236
10.3.1	Algebraic interpretation of the G-NI method	237
10.3.2	Conditioning of the stiffness matrix in the G-NI method	239
10.3.3	Equivalence between G-NI and collocation methods	240
10.3.4	G-NI for parabolic equations	243
10.4	Generalization to the two-dimensional case	245
10.4.1	Convergence of the G-NI method	246
10.5	G-NI and SEM-NI methods for a one-dimensional model problem	254
10.5.1	The G-NI method	255
10.5.2	The SEM-NI method	258
10.6	Spectral methods on triangles and tetrahedra	261
10.7	Exercises	265
<b>11</b>	<b>Discontinuous element methods (DG and mortar)</b>	<b>267</b>
11.1	The discontinuous Galerkin method (DG) for the Poisson problem	267
11.1.1	Numerical results for the DG approximation of Poisson problem	272
11.2	The mortar method	273
11.2.1	Characterization of the space of constraints by spectral elements	275
11.2.2	Characterization of the space of constraints by finite elements	276
11.3	Mortar formulation for the Poisson problem	277
11.4	Choosing basis functions	278
11.5	Choosing quadrature formulae for spectral elements	280
11.6	Choosing quadrature formulae for finite elements	281
11.7	Solving the linear system of the mortar method	282
11.8	The mortar method for combined finite and spectral elements	283
11.9	Generalization of the mortar method to multi-domain decompositions	285
11.10	Numerical results for the mortar method	286
<b>12</b>	<b>Diffusion-transport-reaction equations</b>	<b>291</b>
12.1	Weak problem formulation	291
12.2	Analysis of a one-dimensional diffusion-transport problem	294
12.3	Analysis of a one-dimensional diffusion-reaction problem	299

12.4	Finite elements and finite differences (FD) .....	301
12.5	The mass-lumping technique .....	302
12.6	Decentred FD schemes and artificial diffusion .....	304
12.7	Eigenvalues of the diffusion-transport equation .....	307
12.8	Stabilization methods .....	309
12.8.1	Artificial diffusion and decentred finite element schemes...	310
12.8.2	The Petrov-Galerkin method .....	312
12.8.3	The artificial diffusion and streamline-diffusion methods in the two-dimensional case .....	313
12.8.4	Consistency and truncation error for the Galerkin and generalized Galerkin methods .....	314
12.8.5	Symmetric and skew-symmetric part of an operator .....	315
12.8.6	Strongly consistent methods (GLS, SUPG) .....	316
12.8.7	On the choice of the stabilization parameter $\tau_K$ .....	319
12.8.8	Analysis of the GLS method .....	321
12.8.9	Stabilization through bubble functions .....	327
12.9	DG methods for diffusion-transport equations .....	329
12.10	Mortar methods for the diffusion-transport equations .....	330
12.11	Some numerical tests .....	332
12.12	An example of goal-oriented adaptivity .....	334
12.13	Exercises .....	336
<b>13</b>	<b>Finite differences for hyperbolic equations .....</b>	<b>339</b>
13.1	A scalar transport problem .....	339
13.1.1	An a priori estimate .....	341
13.2	Systems of linear hyperbolic equations .....	343
13.2.1	The wave equation .....	345
13.3	The finite difference method .....	346
13.3.1	Discretization of the scalar equation .....	347
13.3.2	Discretization of linear hyperbolic systems .....	349
13.3.3	Boundary treatment .....	350
13.4	Analysis of the finite difference methods .....	350
13.4.1	Consistency and convergence .....	350
13.4.2	Stability .....	351
13.4.3	Von Neumann analysis and amplification coefficients ....	356
13.4.4	Dissipation and dispersion .....	360
13.5	Equivalent equations .....	364
13.5.1	The upwind scheme case .....	364
13.5.2	The Lax-Friedrichs and Lax-Wendroff case .....	367
13.5.3	On the meaning of coefficients in equivalent equations ....	367
13.5.4	Equivalent equations and error analysis .....	368
13.6	Exercises .....	369
<b>14</b>	<b>Finite elements and spectral methods for hyperbolic equations .....</b>	<b>371</b>
14.1	Temporal discretization .....	371

14.1.1	The forward and backward Euler schemes	371
14.1.2	The upwind, Lax-Friedrichs and Lax-Wendroff schemes	373
14.2	Taylor-Galerkin schemes	378
14.3	The multi-dimensional case	382
14.3.1	Semi-discretization: strong and weak treatment of the boundary conditions	382
14.3.2	Temporal discretization	385
14.4	Discontinuous finite elements	388
14.4.1	The one-dimensional upwind DG method	388
14.4.2	The multi-dimensional case	393
14.4.3	DG method with jump stabilization	395
14.5	Approximation using spectral methods	396
14.5.1	The G-NI method in a single interval	397
14.5.2	The DG-SEM-NI method	401
14.6	Numerical treatment of boundary conditions for hyperbolic systems	402
14.6.1	Weak treatment of boundary conditions	406
14.7	Exercises	408
<b>15</b>	<b>Nonlinear hyperbolic problems</b>	<b>409</b>
15.1	Scalar equations	409
15.2	Finite difference approximation	414
15.3	Approximation by discontinuous finite elements	415
15.3.1	Temporal discretization of DG methods	418
15.4	Nonlinear hyperbolic systems	424
<b>16</b>	<b>Navier-Stokes equations</b>	<b>429</b>
16.1	Weak formulation of Navier-Stokes equations	431
16.2	Stokes equations and their approximation	435
16.3	Saddle-point problems	439
16.3.1	Problem formulation	439
16.3.2	Analysis of the problem	440
16.3.3	Galerkin approximation, stability and convergence analysis	444
16.4	Algebraic formulation of the Stokes problem	447
16.5	An example of stabilized problem	451
16.6	A numerical example	453
16.7	Time discretization of Navier-Stokes equations	455
16.7.1	Finite difference methods	456
16.7.2	Characteristics (or Lagrangian) methods	458
16.7.3	Fractional step methods	459
16.8	Algebraic factorization methods and preconditioners for saddle-point systems	462
16.9	Free surface flow problems	468
16.9.1	Navier-Stokes equations with variable density and viscosity	469
16.9.2	Boundary conditions	470
16.9.3	Application to free surface flows	471

16.10	Interface evolution modelling	473
16.10.1	Explicit interface descriptions	473
16.10.2	Implicit interface descriptions	473
16.11	Finite volume approximation	478
16.12	Exercises	481
<b>17</b>	<b>Optimal control of partial differential equations</b>	<b>483</b>
17.1	Definition of optimal control problems	483
17.2	A control problem for linear systems	485
17.3	Some examples of optimal control problems for the Laplace equation	486
17.4	On the minimization of linear functionals	487
17.5	The theory of optimal control for elliptic problems	489
17.6	Some examples of optimal control problems	494
17.6.1	A Dirichlet problem with distributed control	494
17.6.2	A Neumann problem with distributed control	495
17.6.3	A Neumann problem with boundary control	495
17.7	Numerical tests	496
17.8	Lagrangian formulation of control problems	502
17.8.1	Constrained optimization in $\mathbb{R}^n$	502
17.8.2	The solution approach based on the Lagrangian	503
17.9	Iterative solution of the optimal control problem	505
17.10	Numerical examples	510
17.10.1	Heat dissipation by a thermal fin	510
17.10.2	Thermal pollution in a river	512
17.11	A few considerations about observability and controllability	514
17.12	Two alternative paradigms for numerical approximation	516
17.13	A numerical approximation of an optimal control problem for advection–diffusion equations	517
17.13.1	The strategies “optimize–then–discretize” and “discretize–then–optimize”	519
17.13.2	A posteriori error estimates	520
17.13.3	A test problem on control of pollutant emission	523
17.14	Exercises	525
<b>18</b>	<b>Domain decomposition methods</b>	<b>527</b>
18.1	Some classical iterative DD methods	528
18.1.1	Schwarz method	528
18.1.2	Dirichlet-Neumann method	530
18.1.3	Neumann-Neumann algorithm	532
18.1.4	Robin-Robin algorithm	532
18.2	Multi-domain formulation	533
18.2.1	The Steklov-Poincaré operator	533
18.2.2	Equivalence between Dirichlet-Neumann and Richardson methods	535
18.3	Finite element approximation	538

18.3.1	The Schur complement .....	541
18.3.2	The discrete Steklov-Poincaré operator .....	543
18.3.3	Equivalence between Dirichlet-Neumann and Richardson methods in the discrete case .....	545
18.4	Generalization to the case of many subdomains .....	547
18.4.1	Some numerical results .....	550
18.5	DD preconditioners in case of many subdomains .....	551
18.5.1	Jacobi preconditioner .....	552
18.5.2	Bramble-Pasciak-Schatz preconditioner .....	554
18.5.3	Neumann-Neumann preconditioner .....	555
18.5.4	FETI (Finite Element Tearing & Interconnecting) methods .....	559
18.5.5	FETI-DP (Dual Primal FETI) methods .....	563
18.5.6	BDDC (Balancing Domain Decomposition with Constraints) methods .....	566
18.6	Schwarz iterative methods .....	566
18.6.1	Algebraic form of Schwarz method for finite element discretizations .....	567
18.6.2	Schwarz preconditioners .....	569
18.6.3	Two-level Schwarz preconditioners .....	573
18.7	An abstract convergence result .....	576
18.8	Interface conditions for other differential problems .....	577
18.9	Exercises .....	580

## 19 Reduced basis approximation for parametrized partial differential equations .....

19.1	Elliptic coercive parametric PDEs .....	587
19.1.1	Two simple examples .....	588
19.2	Main components of computational reduction techniques .....	590
19.3	The reduced basis method .....	593
19.3.1	RB Spaces .....	594
19.3.2	Galerkin projection .....	594
19.3.3	Offline-Online computational procedure .....	596
19.4	Algebraic and geometric interpretations of the RB problem .....	597
19.4.1	Algebraic interpretation of the (G-RB) problem .....	598
19.4.2	Geometric interpretation of the (G-RB) problem .....	600
19.4.3	Alternative formulations: Least-Squares and Petrov-Galerkin RB problems .....	602
19.5	Construction of reduced spaces .....	605
19.5.1	Greedy algorithm .....	605
19.5.2	Proper Orthogonal Decomposition .....	608
19.6	Convergence of RB approximations .....	611
19.6.1	A priori convergence theory: a simple case .....	611
19.6.2	A priori convergence theory: greedy algorithms .....	612
19.7	A posteriori error estimation .....	615
19.7.1	Some preliminary estimates .....	615

19.7.2	Error bounds .....	616
19.8	Non-compliant problems .....	617
19.9	Parametrized geometries and operators .....	619
19.9.1	Physical parameters .....	620
19.9.2	Geometrical parameters .....	622
19.10	A working example: a diffusion-convection problem .....	626
<b>References</b> .....		635
<b>Index</b> .....		649
