Part I Eddy Current Models

| | | |
|----------|---|----|
| 1 | Mathematical Framework | 3 |
| 1.1 | Introduction | 3 |
| 1.2 | Preliminaries | 4 |
| 1.3 | The Three-Dimensional Case | 5 |
| 1.3.1 | Function Spaces | 6 |
| 1.3.2 | Behaviour at the Infinity | 12 |
| 1.3.3 | Kernel of div and curl Operators | 15 |
| 1.3.4 | Integral Representations | 17 |
| 1.3.5 | The Exterior Steklov–Poincaré Operator | 23 |
| 1.4 | The Two-Dimensional Case | 26 |
| 1.4.1 | Function Spaces | 27 |
| 1.4.2 | Behaviour at the Infinity | 29 |
| 1.4.3 | Integral Representations | 31 |
| 1.4.4 | The Exterior Steklov–Poincaré Operator | 37 |
| 2 | Maxwell and Eddy Current Equations | 39 |
| 2.1 | Introduction | 39 |
| 2.2 | Maxwell Equations | 40 |
| 2.2.1 | General Setting | 40 |
| 2.2.2 | Presence of Conductors | 41 |
| 2.2.3 | Wave Propagation | 41 |
| 2.2.4 | The Vector Potential | 42 |
| 2.3 | Low Frequency Approximation | 43 |
| 2.3.1 | A Vector Potential Formulation | 43 |
| 2.3.2 | A Scalar Potential Problem | 46 |
| 2.4 | Static Cases | 48 |
| 2.4.1 | Electrostatics | 49 |
| 2.4.2 | Magnetostatics | 50 |

| | | |
|----------|---|------------|
| 2.5 | Time–Harmonic Regime | 51 |
| 2.6 | Eddy Current Equations..... | 52 |
| 3 | Two-Dimensional Models | 55 |
| 3.1 | Introduction..... | 55 |
| 3.2 | A Solenoidal Two-Dimensional Model | 57 |
| 3.2.1 | Total Current Data | 59 |
| 3.2.2 | Voltage Data | 60 |
| 3.2.3 | Power Data | 65 |
| 3.3 | A Transversal Model | 65 |
| 3.3.1 | A Formulation Using the Steklov–Poincaré Operator | 70 |
| 3.3.2 | A Formulation Using Simple Layer Potentials..... | 71 |
| 3.3.3 | A Formulation Using a Simple–Double Layer Potential . | 75 |
| 3.3.4 | A Formulation Using the Poisson Formula..... | 76 |
| 3.3.5 | Other Formulations | 77 |
| 4 | Three-Dimensional Models | 79 |
| 4.1 | A Current Density Formulation..... | 80 |
| 4.2 | A Magnetic Field Formulation | 85 |
| 4.3 | An Electric Field Model | 94 |
| 4.3.1 | A Formulation in the Whole Space | 95 |
| 4.3.2 | A Coupled Interior–Exterior Formulation | 96 |
| 5 | Axisymmetric Models | 103 |
| 5.1 | Axisymmetric Setting | 103 |
| 5.2 | A Magnetic Field Model | 106 |
| 5.2.1 | The Exterior Steklov–Poincaré Operator | 113 |
| 5.2.2 | A Formula for the Self Inductance..... | 115 |
| 5.3 | A Scalar Potential Model | 116 |
| 5.3.1 | A Prescribed Voltage Model | 118 |
| 5.3.2 | A Prescribed Total Current Model | 121 |
| 5.3.3 | A Boundary Integral Formulation | 123 |
| 6 | Eddy Current Models with Thin Inductors | 129 |
| 6.1 | The Two-Dimensional Solenoidal Model | 130 |
| 6.2 | The Two-Dimensional Transversal Model | 136 |
| 6.3 | Three-Dimensional Models | 145 |
| 6.3.1 | The Biot–Savart Law | 146 |
| 6.3.2 | Self Inductance of a Thin Inductor | 149 |
| 6.3.3 | The Complete 3-D Model | 151 |
| 7 | Numerical Methods..... | 153 |
| 7.1 | Introduction and Main Notations | 153 |
| 7.2 | Standard (H^1) Finite Element Methods | 158 |
| 7.2.1 | A Finite Element Method for the 2-D Solenoidal Model | 158 |
| 7.2.2 | Finite Elements for the Axisymmetric Model..... | 161 |

| | | |
|-------|---|-----|
| 7.3 | Finite Elements in $\mathcal{H}(\text{curl})$ -Spaces..... | 164 |
| 7.4 | Finite Elements in $\mathcal{H}(\text{div})$ -Spaces | 166 |
| 7.5 | The Boundary Element Method for Boundary Integral Equations. | 169 |
| 7.5.1 | Boundary Integral Equations in \mathbb{R}^3 | 169 |
| 7.5.2 | Boundary Integral Equations in \mathbb{R}^2 | 177 |
| 7.6 | Approximation of a Domain Integral Equation | 180 |
| 7.7 | Coupled Finite Element/Boundary Element Methods | 184 |
| 7.7.1 | The 2-D Transversal Model | 184 |
| 7.7.2 | The 3-D H -Model | 188 |

Part II Selected Applications

| | | |
|-----------|--|------------|
| 8 | Induction Heating Processes | 197 |
| 8.1 | A Mathematical Model..... | 198 |
| 8.2 | Bibliographical Comments | 201 |
| 8.3 | A 2-D Stationary Problem | 202 |
| 8.4 | A 2-D Time Dependent Problem | 203 |
| 8.5 | Numerical Experiments | 204 |
| 8.6 | An Optimal Control Problem | 205 |
| 8.6.1 | Time Discretization..... | 210 |
| 8.6.2 | The Optimality System..... | 210 |
| 8.6.3 | An Iterative Procedure..... | 214 |
| 8.6.4 | A Numerical Test | 214 |
| 9 | Magnetohydrodynamics and Magnetic Shaping | 221 |
| 9.1 | Incompressible Magnetohydrodynamics | 222 |
| 9.1.1 | A 3-D MHD Problem Using the Magnetic Field..... | 225 |
| 9.1.2 | A 2-D MHD Problem Using the Magnetic Potential | 227 |
| 9.1.3 | Bibliographical Comments..... | 230 |
| 9.2 | Eddy Current Free Boundary Problems | 230 |
| 9.2.1 | A 2-D Simple Magnetic Shaping Model | 231 |
| 9.2.2 | A Level Set Formulation of the Magnetic Shaping Model..... | 235 |
| 9.2.3 | A Variant of the 2-D Model | 237 |
| 9.2.4 | A 3-D Magnetic Shaping Problem | 238 |
| 9.3 | An Electromagnetic Casting Problem | 240 |
| 10 | Inductively Coupled Plasma Torches | 243 |
| 10.1 | The Model | 243 |
| 10.1.1 | Eddy Currents..... | 244 |
| 10.1.2 | Hydrodynamics | 246 |
| 10.1.3 | The Complete Model | 247 |
| 10.2 | Numerical Approximation | 249 |
| 10.3 | A Numerical Simulation | 251 |

| | | |
|-----------|--|-----|
| 11 | Ferromagnetic Shielding | 255 |
| 11.1 | Mathematical Analysis | 258 |
| 11.2 | An Iterative Procedure | 260 |
| 11.3 | Solution of the Linear Problem by a Domain Decomposition Method | 261 |
| 11.4 | An Iterative Procedure for the Discrete Nonlinear Problem | 264 |
| 11.5 | Numerical Results | 267 |
| 12 | The Electrolytic Process for Aluminium Production | 271 |
| 12.1 | Introduction | 271 |
| 12.2 | The Model | 273 |
| 12.2.1 | Electromagnetics | 274 |
| 12.2.2 | Hydrodynamics | 277 |
| 12.2.3 | The Interface | 278 |
| 12.2.4 | The Complete Model | 279 |
| 12.3 | Numerical Approximation | 280 |
| 12.3.1 | Initialization | 281 |
| 12.3.2 | Time Stepping | 281 |
| 12.3.3 | Space Discretization | 283 |
| 12.3.4 | Lagrangian or Eulerian Approach | 286 |
| 12.4 | Numerical Results | 287 |
| | Mathematical Symbols | 291 |
| | References | 295 |
| | Index | 303 |

Mathematical Models for Eddy Currents and
Magnetostatics

With Selected Applications

Touzani, R.; Rappaz, J.

2014, XII, 305 p. 42 illus., 31 illus. in color.,

ISBN: 978-94-007-0202-8
