

# Contents

<b>1</b>	<b>Introduction</b> .....	1
1.1	Aim of the Book .....	1
1.2	About the Method .....	5
1.3	On the Book Content .....	6
	References .....	7
 <b>Part I Information as a Scientific Entity</b>		
<b>2</b>	<b>What is Information?</b> .....	11
2.1	Information in a Usual Meaning .....	11
2.2	Features of Information as a Scientific Entity .....	13
2.3	Comments on the Definitions of Information .....	16
2.4	An Information as a Nominable Entity .....	18
2.4.1	Naming and Counting .....	18
2.4.2	Defining and Representing Natural Integers .....	19
2.4.3	Concept of Nominable Entity .....	22
2.4.4	Representatives of Nominable Entities Need to be Protected .....	26
2.5	A Short History of Communication Engineering .....	27
2.6	Communication Over Space or Over Time .....	30
	References .....	31
<b>3</b>	<b>Basic Principles of Communication Engineering</b> .....	33
3.1	Physical Inscription of a Single Symbol .....	33
3.2	Physical Inscription of a Sequence .....	36
3.2.1	Symbols and Sequences .....	36
3.2.2	Representing a Sequence of Symbols by a Sequence of Signals .....	37
3.3	Receiving a Binary Symbol in the Presence of Noise .....	39
3.4	Communicating Sequences in the Presence of Noise: Channel Coding .....	43

3.4.1	Channel Coding is Needed .....	43
3.4.2	Redundancy Enables Channel Coding .....	45
References	.....	49
<b>4</b>	<b>Information Theory as the Science of Literal Communication .....</b>	<b>51</b>
4.1	Shannon's Paradigm and its Variants .....	52
4.1.1	Basic Paradigm .....	52
4.1.2	Variants of Shannon's Paradigm .....	53
4.1.3	Functions and Limits of the Coding Processes .....	55
4.2	Quantitative Measures of Information .....	58
4.2.1	Principle of Information Measurement .....	58
4.2.2	Proper and Mutual Information .....	59
4.2.3	Entropy and Average Mutual Information .....	62
4.2.4	Properties of the Entropy and of the Mean Mutual Information .....	66
4.2.5	Information Rates; Extension of a Source .....	69
4.2.6	Cross-Entropy .....	70
4.2.7	Comments on the Measurement of Information .....	74
4.3	Source Coding .....	76
4.3.1	Source Models .....	76
4.3.2	Representation of a Code by a Tree, Kraft Inequality .....	78
4.3.3	Fundamental Theorem of Source Coding .....	80
4.3.4	Source Coding by the Huffman Algorithm .....	82
4.3.5	Some Comments About Source Coding .....	85
References	.....	91
<b>5</b>	<b>Channel Capacity and Channel Coding .....</b>	<b>93</b>
5.1	Channel Models .....	94
5.2	Capacity of a Channel .....	95
5.2.1	Defining the Capacity of a Channel .....	95
5.2.2	Capacity of Simple Discrete Input Channels .....	97
5.2.3	Capacity of the Additive White Gaussian Noise Channel ....	97
5.2.4	Kolmogorov's $\varepsilon$ -entropy .....	99
5.3	Channel Coding Needs Redundancy .....	100
5.4	On the Fundamental Theorem of Channel Coding .....	101
5.4.1	A Geometrical Interpretation of Channel Coding .....	102
5.4.2	Random Coding, its Geometrical Interpretation .....	104
5.4.3	Random Coding for the Binary Erasure Channel .....	107
5.4.4	Largest Minimum Distance of Error-Correcting Codes .....	107
5.4.5	General Case: Feinstein's Lemma .....	108
5.5	Error-Correcting Codes .....	109
5.5.1	Defining an Error-Correcting Code .....	109
5.5.2	Using Error-Correcting Codes: Decoding and Regeneration .....	110
5.5.3	Designing Error-Correcting Codes .....	111

5.5.4	Recursive Convolutional Codes	112
5.5.5	Turbocodes	116
5.5.6	Low-Density Parity-Check Codes	118
5.5.7	Decoding Random-Like Codes: Principles	119
5.5.8	Decoding an LDPC Code	120
5.5.9	Decoding a Turbocode	123
5.5.10	Variants and Comments	128
5.5.11	Error-Correcting Codes Defined by Non-Mathematical Constraints: Soft Codes	129
	References	130
<b>6</b>	<b>Information as a Fundamental Entity</b>	<b>133</b>
6.1	Algorithmic Information Theory	134
6.2	Emergent Information in Populations	139
6.3	Physical Entropy and Information	141
6.3.1	Thermodynamics and Physical Entropy	141
6.3.2	Boltzmann Constant as a Signal-to-Noise Ratio	145
6.3.3	Exorcizing Laplace's Demon	147
6.3.4	Information is not a Physical Entity	148
6.4	Information Bridges the Abstract and the Concrete	150
	References	151
<b>Part II Information is Coextensive with Life</b>		
<b>7</b>	<b>An Introduction to the Second Part</b>	<b>155</b>
7.1	Relationship with Biosemiotics	155
7.2	Content and Spirit of the Second Part	156
	References	159
<b>8</b>	<b>Heredity as a Communication Problem</b>	<b>161</b>
8.1	The Enduring Genome	161
8.1.1	A Blatant Contradiction	162
8.1.2	An Upper Bound on the DNA Channel Capacity	165
8.1.3	Main Hypothesis: Genomic Error-Correcting Codes must Exist	167
8.1.4	Subsidiary Hypothesis: Nested Codes	168
8.2	Consequences of the Hypotheses Meet Biological Reality	170
8.2.1	Genomes are Redundant	170
8.2.2	Discrete Species Exist with a Hierarchical Taxonomy	172
8.2.3	Nature Proceeds with Successive Generations	172
8.2.4	Evolution is Contingent and Saltationist	174
8.2.5	Evolution Trends Towards Increasing Complexity	176
8.2.6	Some Comments About the Consequence of the Hypotheses	178
8.3	A Toy Living World	179

8.3.1	A Toy Living World in Order to Mimic the Real World . . . . .	179
8.3.2	Permanence of a ‘Genome’ . . . . .	180
8.3.3	Populations of Individuals Within Species . . . . .	181
8.3.4	An Illustrative Simulation . . . . .	181
8.3.5	Natural Selection in the Toy Living World . . . . .	186
8.4	Identifying Genomic Error-Correcting Codes . . . . .	187
	References . . . . .	191
<b>9</b>	<b>Information is Specific to Life</b> . . . . .	<b>193</b>
9.1	Information and Life are Indissolubly Linked . . . . .	193
9.2	Semantic Feedback Loops . . . . .	194
9.2.1	Semantic Feedback Loops and Genetic Mapping . . . . .	194
9.2.2	Semantic Feedbacks Implement Barbieri’s Organic Codes . .	197
9.2.3	Semantic Feedback Loops are Compatible with Evolution . .	201
9.2.4	Conjecture About the Origin of Semantic Feedback Loops . .	202
9.3	Information as a Fundamental Entity . . . . .	203
9.3.1	Information is an Abstract Entity . . . . .	203
9.3.2	On the Epistemological Status of Information . . . . .	204
9.4	Nature as an Engineer . . . . .	206
	References . . . . .	209
<b>10</b>	<b>Life Within the Physical World</b> . . . . .	<b>211</b>
10.1	A Poorly Understood Divide . . . . .	211
10.2	Maxwell’s Demon in Physics and in Life . . . . .	214
10.3	A Measurement as a Means for Acquiring Information . . . . .	219
	References . . . . .	221
<b>11</b>	<b>Conclusion</b> . . . . .	<b>223</b>
	<b>Appendix A: Tribute to Shannon</b> . . . . .	<b>225</b>
	<b>Appendix B: Some Comments about Mathematics</b> . . . . .	<b>237</b>
	<b>Appendix C: A Short Glossary of Molecular Genetics</b> . . . . .	<b>247</b>
	<b>Index</b> . . . . .	<b>255</b>

Information and Life

Battail, G.

2014, XIV, 260 p., Hardcover

ISBN: 978-94-007-7039-3
