Introduction to Chaotic Behavior in Nonlinear Dynamics	xvii
Phase-Space Dynamics	xix
Conservative Dynamical Systems	xix
Dissipative Dynamical Systems	xxi
Routes to Chaos	xxiv
Turbulence in Fluids	xxvi
1 Nonlinear Ordinary Differential Equations	1
1.1 First-Order Systems	2
1.1.1 Dynamical System	2
1.1.2 Lipschitz Condition	3
1.1.3 Gronwall’s Lemma	3
1.1.4 Linear Equations	6
1.1.5 Autonomous Systems	9
1.1.6 Stability of Equilibrium Points	9
1.1.6.1 Liapunov and Asymptotic Stability	13
1.1.6.2 Liapunov Function Method	15
1.1.7 Center Manifold Theorem	16
1.2 Phase-Plane Analysis	22
1.3 Fully Nonlinear Evolution	34
1.4 Non-autonomous Systems	37
2 Bifurcation Theory	45
2.1 Stability and Bifurcation	46
2.2 Saddle-Node, Transcritical and Pitchfork Bifurcations	48
2.3 Hopf Bifurcation	57
2.4 Break-up of Bifurcations Under Perturbations	63
2.5 Bifurcation Theory for One-Dimensional Maps	63
Appendix The Normal Form Reduction	66

3	Hamiltonian Dynamics	69
3.1	Hamilton's Equations	70
3.2	Phase Space	76
3.3	Canonical Transformations	81
3.4	The Hamilton-Jacobi Equation	86
3.5	Action-Angle Variables	89
3.6	Infinitesimal Canonical Transformations	92
3.7	Poisson's Brackets	93
4	Integrable Systems	97
4.1	Separable Hamiltonian Systems	97
4.2	Integrable Systems	99
4.3	Dynamics on the Tori	105
4.4	Canonical Perturbation Theory	107
4.5	Kolmogorov-Arnol'd-Moser Theory	114
4.6	Breakdown of Integrability and Criteria for Transition to Chaos	123
4.6.1	Local Criteria	123
4.6.2	Local Stability vs. Global Stability	126
4.6.3	Global Criteria	128
4.7	Magnetic Island Overlap and Stochasticity in Magnetic Confinement Systems	131
	Appendix The Problem of Internal Resonances in Nonlinearly-Coupled Systems	136
5	Chaos in Conservative Systems	149
5.1	Phase-Space Dynamics of Conservative Systems	149
5.2	Poincaré's Surface of Section	150
5.3	Area-Preserving Mappings	155
5.4	Twist Maps	157
5.5	Tangent Maps	160
5.6	Poincaré-Birkhoff Fixed-Point Theorem	161
5.7	Homoclinic and Heteroclinic Points	166
5.8	Quantitative Measures of Chaos	170
5.8.1	Liapunov Exponents	170
5.8.2	Kolmogorov Entropy	173
5.8.3	Autocorrelation Function	175
5.8.4	Power Spectra	176
5.9	Ergodicity and Mixing	177
5.9.1	Ergodicity	177
5.9.2	Mixing	178
5.9.3	Baker's Transformation	181
5.9.4	Lagrangian Chaos in Fluids	187
6	Chaos in Dissipative Systems	189
6.1	Phase-Space Dynamics of Dissipative Systems	189
6.2	Strange Attractors	192
6.3	Fractals	195

6.3.1	Examples of Fractals	197
6.3.2	Box-Counting Method	201
6.4	Multi-fractals	202
6.5	Analysis of Time-Series Data	210
6.6	The Lorenz Attractor	212
6.6.1	Equilibrium Solutions and Their Stability	213
6.6.2	Slightly Supercritical Case	215
6.6.3	Existence of an Attractor	218
6.6.4	Chaotic Behavior of the Nonlinear Solutions	219
6.7	Period-Doubling Bifurcations	220
6.7.1	Difference Equations	220
6.7.2	The Logistic Map	223
Appendix A	The Hausdorff-Besicovitch Dimension	239
Appendix B	The Derivation of Lorenz's Equation	240
Appendix C	The Derivation of Universality for One-Dimensional Maps	241
7	Solitons	245
7.1	Fermi-Pasta-Ulam Recurrence	245
7.2	Korteweg-de Vries Equation	246
7.3	Waves in an Anharmonic Lattice	247
7.4	Shallow Water Waves	248
7.5	Ion-Acoustic Waves	251
7.6	Basic Properties of the Korteweg-de Vries Equation	253
7.6.1	Effect of Nonlinearity	253
7.6.2	Effect of Dispersion	254
7.6.3	Similarity Transformation	255
7.6.4	Stokes Waves: Periodic Solutions	256
7.6.5	Solitary Waves	257
7.6.6	Periodic Cnoidal Wave Solutions	260
7.6.7	Interacting Solitary Waves: Hirota's Method	265
7.7	Inverse-Scattering Transform Method	269
7.7.1	Time Evolution of the Scattering Data	272
7.7.2	Inverse Scattering Problem: Gel'fand-Levitan-Marchenko Equation	274
7.7.3	Direct-Scattering Problem	279
7.7.4	Inverse-Scattering Problem	282
7.8	Conservation Laws	287
7.9	Lax Formulation	290
7.10	Bäcklund Transformations	294
8	Singularity Analysis and the Painlevé Property of Dynamical Systems	301
8.1	The Painlevé Property	302
8.2	Singularity Analysis	305
8.3	The Painlevé Property for Partial Differential Equations	312

9	Fractals and Multi-fractals in Turbulence	317
9.1	Scale Invariance of the Navier-Stokes Equations and the Kolmogorov (1941) Theory	324
9.2	The β -Model for Turbulence	327
9.3	The Multi-fractal Models	331
9.4	The Random- β Model	335
9.5	Transition to the Dissipation Range	340
9.6	Critical Phenomena Perspectives on the Turbulence Problem	342
10	Exercises	347
	References	361
	Index	371

Nonlinear Dynamics and Chaotic Phenomena: An
Introduction

Shivamoggi, B.K.

2014, XXVII, 375 p. 122 illus., Hardcover

ISBN: 978-94-007-7093-5
