

# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	Key Contexts	1
1.2	Solar Energy Law, Politics and Economics	4
	References	8
<b>2</b>	<b>The Solar Energy Resource</b>	<b>9</b>
2.1	Overview	9
2.2	Terrestrial Measurement of Solar Energy	12
2.3	Prediction of Solar Energy	18
2.3.1	Insolation a Horizontal Plane	18
2.3.2	Insolation on a Tilted Plane	21
2.4	Use of Satellite Information to Produce Solar Energy Data	23
2.5	Solar Radiation Utilisability	23
2.6	Daylight Data	24
2.7	Geographical Availability of Solar Energy	25
2.8	Solar Geometry	30
2.9	Skyward Distribution of Diffuse Insolation	33
	References	36
<b>3</b>	<b>Optics and Heat Transfer in Solar Collectors</b>	<b>39</b>
3.1	Overview	39
3.2	Glass	40
3.3	Plastic Materials	40
3.4	Transmittance of Solar Energy	42
3.5	Solar Energy Reflector Materials	46
3.5.1	Flat Reflectors	46
3.5.2	Parabolic Reflectors	48
3.6	Heat Transfer in Line-Axis Concentrators	59
3.7	Collector Absorbers	66
	References	70

<b>4</b>	<b>Storage of Solar Heat</b>	75
4.1	Overview	75
4.2	Sensible Heat Storage in Liquids	77
4.3	Sensible Heat Storage in Solids	80
4.4	Latent Heat Storage	81
	References	87
<b>5</b>	<b>Flat-Plate and Evacuated Tube Collectors</b>	91
5.1	Overview	91
5.2	Air Heating Flat-Plate Collectors	93
5.3	Water Heating Flat-Plate Collectors	97
5.4	Evacuated-Tube Flat-Plate Collectors	104
5.5	Rating Tests for Solar Collectors	108
5.6	Architectural Integration of Solar Collectors	109
	References	111
<b>6</b>	<b>Use of Heat From, and Thermal Management of, Photovoltaics</b>	115
6.1	Overview	115
6.2	PV/T Water Heating Collectors	116
6.3	PV/T Air Heating Collectors	118
6.4	Thermal Management of Photovoltaics	118
	References	120
<b>7</b>	<b>Solar Thermal Power Generation and Industrial Process Heat</b>	123
7.1	Overview	123
7.2	Parabolic Trough Systems	125
7.2.1	Overview	125
7.3	Fresnel Mirror System	126
7.4	Heliostat Field Central Receiver Systems	127
7.5	Parabolic Dish Systems	128
7.6	Characteristics of Concentrating Solar Thermal Electricity Generating Systems	129
7.7	Non-convecting Solar Panels	130
7.8	Solar Chimney Power Plants	137
7.9	Solar Process Heating	138
7.9.1	Industry	138
7.9.2	Water Treatment Using Solar Energy	139
7.9.3	Cooking	139
	References	141
<b>8</b>	<b>Solar Water Heating and Combisystems</b>	145
8.1	Overview	145
8.2	Integral Passive Solar Water Heaters (IPSWH)	153
8.3	Distributed Water Heaters	156
8.4	Photovoltaic Solar Water Heaters	166
8.5	Freeze Protection	166
8.6	System Testing Methods	169
	References	171

<b>9</b>	<b>Solar Drying</b> . . . . .	177
	References . . . . .	189
<b>10</b>	<b>Solar Cooling, Refrigeration and Desalination</b> . . . . .	191
10.1	Introduction . . . . .	191
10.2	Adsorption Units . . . . .	193
10.3	Absorption Units . . . . .	195
10.4	Solar Desalination . . . . .	196
	References . . . . .	200
<b>11</b>	<b>Greenhouses</b> . . . . .	201
11.1	Overview . . . . .	201
11.2	Greenhouse Materials . . . . .	203
11.3	Mathematical Modelling the Internal Environment in a Greenhouse . . . . .	204
11.4	Auxiliary Heating Environmental Control and Energy Storage in Greenhouses . . . . .	206
	References . . . . .	210
<b>12</b>	<b>Passive and Hybrid Solar Design of Buildings</b> . . . . .	213
12.1	Overview . . . . .	213
12.2	Solar Access . . . . .	215
12.3	Passive Features for Temperate Climates . . . . .	216
12.3.1	Direct Gain . . . . .	218
12.3.2	Indirect Gain . . . . .	221
12.3.3	Isolated Gain . . . . .	225
12.3.4	Hybrid Systems . . . . .	232
12.3.5	Overheating Prevention . . . . .	235
12.4	Auxiliary Heating and Controls in Passive Solar Buildings . . . .	237
12.5	Passive Features for Hot Climates . . . . .	238
	References . . . . .	242
	<b>References</b> . . . . .	245
	<b>Index</b> . . . . .	253

Harnessing Solar Heat

Norton, B.

2014, XVII, 258 p. 193 illus., 7 illus. in color.,

ISBN: 978-94-007-7275-5
