Part I Basics and Fundamentals

1 Ray Optics, Wave Optics and Imaging System Design	3
1.1 Ray Optics	4
1.2 Reflection, Refraction and Propagation of Light	5
1.3 Matrix Formulation of Ray Optics	10
1.4 Wave Optics	12
1.5 Helmholtz Equation and Its Consequences	14
1.6 Solution of Paraxial Plane Wave (Beam Optics)	16
1.7 Characteristics of Plane Waves	18
1.8 Diffraction of Light and Fourier Optics	20
1.9 Optical Imaging Systems and Microscopy	24
1.10 Optical Resolution Limit	28
1.11 Optical Aberrations: Chromatic, Spherical and Astigmatism	29
Appendix Recommended Reading	31
References	31
2 Basics of Electromagnetic Theory for Fluorescence Microscopy	33
2.1 Electrostatics and Magnetostatics	33
2.2 Electromagnetic Theory of Light (Wave Equations)	35
2.3 Solution of Wave Equation	37
2.4 Polarization Effects of Light	44
2.5 Transverse Electromagnetic (TEM) Waves	46
Appendix Recommended Reading	50
References	51
3 Electric Field Effects in Optical Microscopy Systems	53
3.1 Diffraction and Fourier Optics	53
3.2 Fresnel and Fraunhofer Diffraction	53
3.3 System Point Spread Function and Image Formation	56
3.4 Angular Spectrum Representation for Far Fields	57
3.5 Field Distribution at the Geometrical Focus	58
3.6 Field Distribution in Fluorescence Imaging Systems	61
3.7 Field-Dipole Interaction and the System PSF	65
Appendix Recommended Reading	69
References	69
4 Quantum Description of Radiation Field and Optical Microscopy	71
4.1 Wave-Particle Duality	71
4.2 The Concept of Photon	73
4.3 Basics of Quantum Mechanics	77
4.4 Field Quantization	78
4.5 Quantum States of Light	82

4.6	Quantum Effects in Microscopy and Imaging	90
	Appendix Recommended Reading	93
	References	94
5	Molecular Physics of Fluorescent Markers	95
5.1	Basics of Atomic and Molecular Spectroscopy	95
5.2	The Molecular Orbital Theory	97
5.3	Electronic States, Selection Rules and Absorption Spectra	100
5.4	Fluorescent Markers	102
	Appendix Recommended Reading	106
	References	107
Part II Advanced Imaging		
6	Basics of Fluorescence and Photophysics	111
6.1	Fluorescence and Phosphorescence	111
6.2	Absorption and Lambert-Beers Law	113
6.3	Kasha's Law, Stokes Shift and Frank-Condon Principle	114
6.4	Quantum Yield and Lifetime of Fluorescent Markers	117
6.5	Fluorescence Anisotropy and Polarization	118
6.6	Common Fluorophores for Biological Imaging	121
6.7	Static and Dynamic Quenching: Stern-Volmer Equations	123
6.8	Metastable States and Its Effect on Photobleaching	127
6.9	Optical Techniques for Photobleaching Reduction	129
	Appendix Recommended Reading	133
	References	134
7	General Fluorescence Imaging Techniques	135
7.1	Fluorescence Lifetime Imaging	135
7.2	Forster's Resonance Energy Transfer (FRET)	137
7.3	Second Harmonic Generation	141
7.4	Fluorescence Correlation Spectroscopy	143
	Appendix Recommended Reading	147
	References	147
8	Multiphoton Fluorescence Microscopy	149
8.1	Perturbation Theory	149
8.2	Calculation of Transition Probabilities	152
8.3	Multiphoton Absorption in Fluorescence Microscopy	154
8.4	Selection Rules for Multiphoton Absorption Process	157
	Appendix Recommended Reading	158
	References	158
9	Super-resolution Fluorescence Microscopy	161
9.1	Total Internal Reflection Fluorescence (TIRF) Microscopy	161
9.2	4pi Laser Scanning Fluorescence Microscopy	164
9.3	Localization Based Super-resolution Fluorescence Microscopy	167
9.4	SPIM Microscopy and Its Super-resolution Analogue (IML-SPIM)	173
9.5	Structured Illumination Microscopy	176
9.6	Stimulated Emission Depletion (STED) Microscopy	176
9.7	Spatial Filtering Technique based Multi-functional Fluorescence Microscopy	180
	Appendix Recommended Reading	186
	References	186

10 Image Reconstruction for Fluorescence Microscopy	189
10.1 Image Formation in Fluorescence Microscopy	189
10.2 Maximum Likelihood (Richardson-Lucy) Method	191
10.3 Maximum A-posteriori Method	193
10.4 Designing Potential Function	196
10.5 Information Divergence Test (Csiszár)	197
10.6 Algorithm Testing and Data Acquisition	198
Appendix Recommended Reading	201
References	202
11 Future Prespective of Fluorescence Microscopy	203
11.1 Fluorophore Engineering	203
11.2 New Scanning Systems, Multicolor Imaging and Single Photon Detectors	204
11.3 Emerging Imaging Techniques and Superresolution Microscopy	205
11.4 Depth Imaging in Fluorescence Microscopy	205
11.5 High Throughput Imaging	206
11.6 Development of Analysis Software	206
11.7 Onchip Microscopy Techniques	206
References	207
Appendix A Selected Mathematical Formula	209
A.1 Taylor Series Expansion for Function of One Variable	209
A.2 Gradient and Laplacian Operators	209
Appendix B Wave Impedance, Fourier Transform and Modes of Light	213
B.1 Wave Impedence	213
B.2 Fourier Transform	214
B.3 Higher Order Modes of Light	215
Appendix C Bessel Table and Dyes for Super-resolution Imaging	217

Fundamentals of Fluorescence Microscopy

Exploring Life with Light

Mondal, P.P.; Diaspro, A.

2014, XV, 218 p. 140 illus., 55 illus. in color., Hardcover

ISBN: 978-94-007-7544-2
