

# Contents

<b>1</b>	<b>Prologue</b>	1
1.1	Some Remarks Regarding the Purpose of this Book	1
1.2	A Reminder of Scalars, Vectors, and Tensors	6
1.2.1	Example I: Glass Fiber Optics—Pressing of a Spherical Lens into a Bushing	7
1.2.2	Example II: Composites—Thermal Stresses Around Fibers	10
1.2.3	Example III: Cracks	13
	References	14
<b>2</b>	<b>Coordinate Transformations</b>	15
2.1	A Personal Remark	15
2.2	First Definitions and Notions in Index Notation	16
2.3	Vector Interpretation of the Metric	23
2.4	Co- and Contravariant Components	27
2.5	Co- and Contravariant from the Perspective of Vectors	34
2.6	Physical Components of Vectors and Tensors	37
2.7	A Touch of Differential Geometry	42
2.8	Would You Like to Know More?	45
	References	46
<b>3</b>	<b>Balances (in Particular in Cartesian Systems)</b>	47
3.1	Preliminary Remarks	47
3.2	Balances of Mass and Momentum	51
3.3	General Global Balances	54
3.4	Transport Theorem for Volumes	56
3.5	Transport Theorem for Surface Densities	66
3.6	Combining Balances and Transport Theorems	70
3.7	General Balances in Regular and Singular Points	70
3.8	Local Balances of Mass and Momentum in Regular Points	72
3.9	Local Balances of Energy in Regular Points	75
3.10	Local Balances of Angular Momentum, Moment of Momentum, and Spin in Regular Points	79

3.11	Summary of Local Balances in Regular Points . . . . .	83
3.12	Summary of Local Balances in Singular Points . . . . .	83
3.13	Would You Like to Know More? . . . . .	86
	References . . . . .	87
<b>4</b>	<b>Spatial Derivatives of Fields . . . . .</b>	<b>89</b>
4.1	Spatial Derivatives of Scalar Fields . . . . .	89
4.2	Spatial Derivatives of Vector Fields . . . . .	90
4.3	Invariant Notation of Spatial Derivatives of Scalar Fields . . . . .	95
4.4	Spatial Derivatives of Tensors . . . . .	97
4.5	Integral Theorems Revisited . . . . .	100
4.6	Would You Like to Know More? . . . . .	105
	References . . . . .	105
<b>5</b>	<b>Balance Equations in Skew Curvilinear Coordinate Systems . . . . .</b>	<b>107</b>
5.1	The Balance of Mass in Regular Points in Arbitrary Coordinate Systems . . . . .	107
5.2	The Balance of Mass (Regular Form) in Cylindrical Coordinates . . . . .	108
5.3	Balance of Momentum in Regular Points in Arbitrary Coordinate Systems . . . . .	110
5.4	The Balance of Momentum (Regular) in Cylindrical and Spherical Coordinates . . . . .	111
5.5	Balance of Momentum in Statics . . . . .	114
5.6	Balance of Momentum (Regular Form) of Statics in Cylindrical and Spherical Coordinates . . . . .	114
5.7	Balances of Energy for Regular Points in Arbitrary Coordinate Systems . . . . .	117
5.8	Balances of Angular Momentum for Regular Points in Arbitrary Coordinate Systems . . . . .	123
5.9	The Essential Balances in Singular Points for Arbitrary Coordinate Systems . . . . .	125
5.10	The Transport Theorem for Volume Integrals in Arbitrary Coordinate Systems . . . . .	126
5.11	Global Balances of Mass, Momentum, and Energy in Arbitrary Coordinate Systems . . . . .	127
5.12	Would You Like to Know More? . . . . .	128
	References . . . . .	128
<b>6</b>	<b>Constitutive Equations in Arbitrary Coordinate Systems . . . . .</b>	<b>129</b>
6.1	Some Initial Remarks . . . . .	129
6.2	HOOKE's Law . . . . .	131
6.3	The Constitutive Equation of NAVIER-STOKES . . . . .	138
6.4	The Ideal Gas Law . . . . .	141

6.5	The Internal Energy of Gases and Solids . . . . .	143
6.6	FOURIER'S Law of Heat Conduction . . . . .	150
6.7	Would You Like to Know More? . . . . .	151
	References . . . . .	152
<b>7</b>	<b>A First Glance on Field Equations . . . . .</b>	<b>153</b>
7.1	A Preliminary Remark. . . . .	153
7.2	Globally Stated Problems Involving Control Volumes. . . . .	154
7.3	The NAVIER-LAMÉ Equations. . . . .	161
7.4	The NAVIER-STOKES Equations. . . . .	164
7.5	The Semi-Inverse Method Applied to Dynamic Gas Flow . . . . .	169
7.6	The Heat Conduction Equation. . . . .	176
7.7	Would You Like to Know More? . . . . .	180
	References . . . . .	180
<b>8</b>	<b>Observers and Frames of Reference in Classical</b>	
	<b>Continuum Theory . . . . .</b>	<b>181</b>
8.1	Introduction . . . . .	181
8.2	Euclidean Transformations. . . . .	182
8.3	Objective Tensors and Kinematic Applications. . . . .	187
8.4	Balance of Mass and Euclidean Transformation . . . . .	195
8.5	The Balance of Momentum in a Moving Coordinate System: An Almost Philosophical Discourse . . . . .	197
8.6	Energy Balances in a Rotating System . . . . .	207
8.7	Time Derivatives in Moving Systems . . . . .	209
8.8	A Remark on the Form Invariance of Constitutive Equations. . . . .	212
8.9	Would You Like to Know More? . . . . .	213
	References . . . . .	213
<b>9</b>	<b>Problems of Linear Elasticity . . . . .</b>	<b>215</b>
9.1	Introduction . . . . .	215
9.2	The Rotating Disc. . . . .	216
9.3	The Pipeline Problem: A Thick-Walled Hollow Cylinder Under Internal and External Pressure . . . . .	221
9.4	Thermal Stresses in Fiber Reinforced Composites. . . . .	224
9.5	Transformation Toughened Ceramics . . . . .	226
9.6	Compression of a Sphere. . . . .	234
9.7	The GRIFFITH Crack Model. . . . .	245
9.8	Would You Like to Know More? . . . . .	249
	References . . . . .	250

<b>10</b>	<b>Selected Problems for Newtonian and Maxwellian Fluids . . . . .</b>	<b>251</b>
10.1	Some Comments on Modeling, in Particular Modeling of Transient Channel Flow . . . . .	251
10.2	Transient Channel Flow of a NAVIER-STOKES-Fluid . . . . .	256
10.3	Transient Channel Flow of a MAXWELL Fluid . . . . .	259
10.4	Expanding and Contracting Stars and Universes: An Approach Based on Classical Continuum Physics . . . . .	267
10.5	Would You Like to Know More? . . . . .	286
	References . . . . .	287
<b>11</b>	<b>Introduction to Time-Independent Plasticity Theory . . . . .</b>	<b>289</b>
11.1	An Important Problem in Plasticity: Autofrettage of a Hollow Spherical Vessel . . . . .	289
11.2	The Radially Symmetric Solution . . . . .	290
11.3	The PRANDTL-REUSS Equations . . . . .	297
11.4	Would You Like to Know More? . . . . .	305
	References . . . . .	305
<b>12</b>	<b>Entropy . . . . .</b>	<b>307</b>
12.1	Entropy as a Balanceable Quantity . . . . .	307
12.2	Entropy as a Measure of (Dis-)Order and (Ir-)Reversibility . . . . .	316
12.3	Properties of the Global Entropy Inequality: The Concept of Availability . . . . .	321
12.4	Reduction of the Constitutive Equations for a Viscous Heat-Conducting Fluid . . . . .	324
12.5	Would You Like to Know More? . . . . .	329
	References . . . . .	329
<b>13</b>	<b>Fundamentals of Electromagnetic Field Theory . . . . .</b>	<b>331</b>
13.1	Preliminary Remarks . . . . .	331
13.2	The Conservation Law for the Magnetic Flux . . . . .	334
13.3	Electric Charges, Currents, Electric Field Density and Magnetic Induction . . . . .	339
13.4	Conservation of Total Charge . . . . .	342
13.5	Measuring the Charge and Current Potentials . . . . .	348
13.6	Decomposition of the Total Charge, Polarization, Rewriting COULOMB'S Law . . . . .	352
13.7	Decomposition of the Total Currents, Magnetization, Rewriting ØRSTED-AMPÈRE'S Law . . . . .	354
13.8	The MAXWELL-LORENTZ Aether Relations . . . . .	356
13.9	Transformation Properties of the Electro-Magnetic Fields . . . . .	359
13.10	Transformation Properties of the MAXWELL-LORENTZ Aether Relations and MAXWELL'S Equations . . . . .	364

13.11	Four-Vector Formalism for the Electromagnetic Fields . . . . .	366
13.12	Four-Vector Notation of the MAXWELL-LORENTZ Aether Relations: The LORENTZ Transformation. . . . .	371
13.13	Energy and Momentum of the Electromagnetic Field . . . . .	380
13.14	Simple Electrodynamic Constitutive Equations. . . . .	382
13.15	Would You Like to Know More? . . . . .	389
	References . . . . .	390
	<b>Picture Sources</b> . . . . .	391
	<b>Subject Index</b> . . . . .	395

An Expedition to Continuum Theory

Müller, W.H.

2014, XIII, 399 p. 161 illus., 32 illus. in color., Hardcover

ISBN: 978-94-007-7798-9
