Part I Cavitation and Cavitation Erosion: Computational and Experimental Approaches

1	Cavitation and Cavitation Erosion	3
	Georges L. Chahine, Jean-Pierre Franc and Ayat Karimi	
1.1	Introduction to Cavitation	4
1.1.1	Engineering Definition of Cavitation	5
1.1.2	Cavitation Nuclei	5
1.1.3	Nuclei Critical Pressure	7
1.1.4	Need for Numerical Modeling of Dynamic Effects	9
1.2	Cavitation Erosion Overview	10
1.3	Cavitation Impact Loads	12
1.4	Material Response to Impact Loads and Most Relevant Properties	14
1.5	Summary	18
	References	18
2	Laboratory Testing Methods of Cavitation Erosion	21
	Georges L. Chahine, Jean-Pierre Franc and Ayat Karimi	
2.1	Introduction	21
2.2	Vibratory Cavitation Apparatus (ASTM G32)	22
2.3	Cavitating Liquid Jets (ASTM G134 and Variants)	25
2.4	High-speed Cavitation Tunnels	29
2.5	Summary	33
	References	34
3	Pitting and Incubation Period	37
	Jean-Pierre Franc, Georges L. Chahine and Ayat Karimi	
3.1	Introduction	38
3.2	Erosion Pits	39
3.2.1	Pitting Test Analysis	39
3.2.2	Histograms of Pit Size	41

3.2.3	Effect of Flow Velocity at Constant Cavitation Number	44
3.2.4	Effect of Maximum Pit Size	44
3.3	Scaling of Pit Distribution for Cavitating Jets	47
3.3.1	Pit Distribution.	47
3.3.2	Effect of Jet Velocity on Pitting.	49
3.3.3	Effect of Jet Velocity on Characteristic Parameters	49
3.3.4	Effect of Materials Properties.	52
3.3.5	Universal Representation Using Nondimensional Quantities	53
3.4	Estimation of Impact Loads from Pitting Tests	55
3.4.1	Characteristic Deformation of Cavitation Pit	57
3.4.2	Stress–Strain Curve from Nanoindentation Measurements	58
3.4.3	Distribution of Impact Pressure	62
3.4.4	Impact Loads	65
3.5	Summary.	66
	References	68
4	Cavitation Impulsive Pressures	71
	Georges L. Chahine, Jean-Pierre Franc and Ayat Karimi	
4.1	Introduction	72
4.2	Measurement and Signal Processing Techniques	72
4.2.1	Pressure Transducers.	72
4.2.2	Signal Processing	75
4.3	Peak Number Density Distribution	77
4.3.1	Effect of Pressure Threshold	77
4.3.2	Effect of Jet Velocity on Peak Number and Density Distributions	78
4.3.3	Weibull Curve Fit.	81
4.4	Pressure Pulse Measurements at Constant Cavitation Number	84
4.5	Characteristics of Impulsive Pressures.	87
4.5.1	Map of Pulse Width	87
4.5.2	Pressure Pulse Distribution Representing Cavitation Field Intensity	87
4.6	Impact Loads	88
4.7	Comparison Between Peak Rate and Pitting Rate.	91
4.8	Summary.	93
	References	94
5	Mass Loss and Advanced Periods of Erosion	97
	Georges L. Chahine, Jean-Pierre Franc and Ayat Karimi	
5.1	Introduction	98
5.2	Stages of Erosion Progression	98
5.3	Erosion Under Various Cavitation Intensity Levels.	100

5.3.1	Mathematical Representation of Erosion Progress. . . .	100
5.3.2	Erosion by Ultrasonic Cavitation and Cavitating Jets	102
5.3.3	Effect of Jet Pressure on Erosion	104
5.4	Erosion Progression for Different Materials	106
5.5	Erosion Profiles	110
5.5.1	Comparison of Erosion Profiles on Different Materials	110
5.5.2	Reproducibility of Mass Loss Tests	113
5.6	Relationship Between Erosion Rate and Incubation Time	115
5.7	Summary	119
	References	120
6	Modeling of Cavitation Dynamics and Interaction with Material	123
	Georges L. Chahine	
6.1	Introduction	123
6.2	Numerical Models	124
6.2.1	Flow Field Models	125
6.2.2	Structural Model.	129
6.3	Impulsive Loads Due to Bubble Collapse Near Rigid Boundary	129
6.3.1	Re-entrant Jet Dynamics Using BEM	130
6.3.2	Pressure Loading from Hybrid Incompressible/Compressible Model	130
6.3.3	Effect of Local Pressure Driving Bubble Collapse . . .	135
6.3.4	Effect of Standoff.	138
6.3.5	Influence of Bubble Size	141
6.4	Material Deformation from Cavitation Impulsive Loads	144
6.4.1	Finite Element Modeling	144
6.4.2	Process of Pit Formation	146
6.4.3	Scaling of Pit Size with Bubble Size and Driving Pressure.	148
6.4.4	Effects of Load Duration and Lateral Extent on Permanent Deformation	149
6.4.5	Recovering Impulsive Load from Material Permanent Deformation.	152
6.5	Summary	158
	References	159
7	Modeling of Material Response.	163
	Ayat Karimi and Jean-Pierre Franc	
7.1	Phenomenological Model of Erosion.	163
7.2	Characterization of Material Deformation and Flow Aggressiveness.	166

7.2.1	Material Deformation	166
7.2.2	Cavitation Aggressiveness	167
7.3	Erosion Rate Computation	169
7.3.1	Principle of the Model	169
7.3.2	Erosion Rate During the Steady-State Period	171
7.3.3	Duration of the Acceleration Period	174
7.3.4	Erosion Rate During the Acceleration Period	175
7.4	Application of the Model	176
7.5	Summary	179
	References	180

**Part II Selected Papers from the International Workshop
on Advanced Experimental and Numerical Techniques
for Cavitation Erosion Prediction
(Grenoble, March 1–2, 2011)**

8	Hydrodynamic Processes Controlling Cavitation Erosion	185
	Göran Bark and Rickard E. Bensow	
8.1	Background and Present Approach	185
8.2	Erosion Due to Sheet and Cloud Cavitation	187
8.3	Focusing of Collapse Energy	195
8.4	Primary and Secondary Cavitation	197
8.5	Asymmetry and Vortex Formation	199
8.6	Generalized Collapses and Rebounds	209
8.7	Summary and Conclusions	216
	References	218
9	On the Kinematics of Sheet and Cloud Cavitation and Related Erosion	221
	Peter F. Pelz, Thomas Keil and Gerhard Ludwig	
9.1	Introduction	222
9.2	Experimental Set Up and Dimensionless Products	222
9.3	Experimental Results	225
9.3.1	Observations	225
9.3.2	Strouhal Number Versus Reynolds and Cavitation Number	227
9.3.3	Sheet Cavity Length and Circulation of the Cloud	230
9.4	Plastic Deformation of Solid Surface Due to Cloud Cavitation	232
9.4.1	Automated Pit-Count System	232
9.4.2	Damage Maps	233
9.5	Conclusions	236
	References	236

10	Investigations into Dependence Between Cavitation Structures and Cavitation Erosion	239
	Matevž Dular	
10.1	Introduction	240
10.2	Experimental Set-Ups	240
10.2.1	Single Hydrofoils and Incubation Period	240
10.2.2	Pure Copper Specimens and Mass Loss.	244
10.2.3	Pit-Counting Method.	244
10.2.4	Specimen Weighing	246
10.3	Results and Discussion	246
10.3.1	Hydrofoils	246
10.3.2	Pure Copper Specimens and Mass Loss.	251
10.4	Conclusions	254
	References	255
11	Recent Investigations on Cavitation Erosion at the University of Fukui	257
	Shuji Hattori	
11.1	Introduction	257
11.2	Erosion Database	258
11.2.1	Construction of the Database	258
11.2.2	Carbon Steels and Stainless Steels	260
11.2.3	Cast Iron and Nonferrous Alloys	266
11.3	Erosion Under Various Conditions	269
11.3.1	Erosion Mechanism of SUS304 and Co Alloys and the Comparison Between Vibratory and Cavitating Liquid Jet Methods	269
11.3.2	Effect of Temperature on Erosion.	271
11.3.3	Erosion in Liquid Metals.	273
11.4	Impact Load Measurement for Erosion Prediction	276
11.5	Conclusions	281
	References	281
12	Effect of Nozzle Geometry on Aggressivity of Cavitating Jet for Cavitation Erosion Test and Applications.	283
	Satoshi Nishimura, Osamu Takakuwa and Hitoshi Soyama	
12.1	Introduction	283
12.2	Experimental Apparatus and Procedure	285
12.2.1	Cavitating Jet Apparatus	285
12.2.2	Erosion Test	285
12.2.3	Impact Force Measurement	286
12.2.4	High-Speed Movie Observation	288

12.3	Results	289
12.3.1	Optimum Standoff Distance	289
12.3.2	Influence of Nozzle Outlet Geometry on Mass Loss.	291
12.3.3	Influence of Nozzle Outlet Geometry on Impact Force	291
12.3.4	Visualizations of the Cavitating Jet.	293
12.3.5	Shedding Frequency	294
12.3.6	Width of the Cavitating Region	296
12.3.7	Optimum Strouhal Number	299
12.4	Conclusions	299
	References	300
13	Prediction of Cavitation Erosion and Residual Stress of Material Using Cavitating Flow Simulation with Bubble Flow Model.	303
	Masashi Fukaya	
13.1	Introduction	304
13.2	Numerical Method	305
13.2.1	Governing Equations.	305
13.2.2	Cavitation Impact Energy	308
13.2.3	Simulated Objects and Calculation Conditions	309
13.3	Results and Discussion	311
13.3.1	Centrifugal Pump	311
13.3.2	Cavitating Jet.	318
13.4	Conclusion.	326
	References	326
14	Assessment of Erosion Sensitive Areas via Compressible Simulation of Unsteady Cavitating Flows.	329
	Steffen J. Schmidt, Michael S. Mihatsch, Matthias Thalhamer and Nikolaus A. Adams	
14.1	Introduction	329
14.2	Numerical Method	330
14.3	Hydrofoil Cavitation and Predictability of Large and Medium Scale Dynamics.	332
14.4	Collapse of a Bubble Cluster Versus Collapse of a Vapor Volume Fraction	334
14.5	Prediction of Erosion-Sensitive Areas in an Axisymmetric Nozzle-Target Flow	339
14.6	Conclusions and Outlook.	342
	References	343

15	Scaling of Cavitation Bubble Cloud Dynamics on Propellers	345
	Georges L. Chahine, Chao-Tsung Hsiao and Reni Raju	
15.1	Introduction	345
15.2	Numerical Models	346
15.2.1	Viscous Flow Solver	347
15.2.2	Bubble Tracking and Dynamics Model	348
15.3	Cavitation Dynamics and Pressure Loading on a Rotating Propeller	349
15.3.1	Computational Domain and Grid	349
15.3.2	Pressure Distribution on Propeller	350
15.3.3	Eulerian–Lagrangian Cavitation Simulations	352
15.3.4	Scaling of Propeller Cavitation Dynamics	353
15.4	Bubble Cloud Cavitation Dynamics	360
15.4.1	Cloud Cavitation Modeling	361
15.4.2	Collective Dynamics of a Bubble Cloud	366
15.5	Summary	369
	References	370
16	Numerical Simulations of Shock Emission by Bubble Collapse Near a Rigid Surface	373
	Eric Johnsen	
16.1	Cavitation Erosion Across Disciplines	374
16.1.1	Undesirable Cavitation Damage	374
16.1.2	Desirable Cavitation Damage	375
16.2	Single-Bubble Collapse and Cavitation Erosion	375
16.2.1	Past Theoretical and Experimental Work	375
16.2.2	Past Computational Work	377
16.3	Advances in Numerical Simulations of Single-Bubble Collapse	378
16.3.1	A Study of Rayleigh Collapse and Shock-Induced Collapse	378
16.3.2	Application to Shock-Wave Lithotripsy	387
16.3.3	Application to the Spallation Neutron Source	390
16.4	Concluding Remarks	393
	References	394
