

Contents

1	The Importance of Marine Biodiversity	1
	Key Features.....	2
	Hierarchical Components.....	6
	The Functional Significance of Biodiversity	7
	Marine Biodiversity and Ecosystem Services.....	9
2	The Impacts of Human Activities on Marine Biodiversity.....	15
	The Strategic Value of Research	18
3	Status and Trends.....	21
	How Many Marine Species are There?.....	21
	Taxonomic Records.....	23
	Cryptic Species.....	25
	The DNA Barcode.....	26
	The Drive to Identify New Species.....	28
	The “Taxonomic Impediment”.....	29
	Extinct Species.....	32
	Endangered Species	34
	Ecosystems Under Pressure: The Deep Sea.....	36
	Climate Change	37
	Acidification, a “Chemical Mirror” of Ocean Warming	49
	Spatial Patterning of Characteristics	55
	Large-Scale Patterns	56
	Local Patterns (Habitats).....	57
	Habitat Classification	57
	Population Structure and Connectivity.....	62
	Biological Invasions	66
	Temporal Patterns.....	70
	Geological Scale.....	70
	Historical Scale.....	72
	Cascading Effects	73

Fisheries Trends—Other Uses of Marine Ecosystems	76
Dedicated Time Series	78
4 Conceptualising Biodiversity	85
Conceptual Frameworks for Relationships Between Biodiversity and Human Societies	85
Choice of Model Framework	91
5 Measuring Biodiversity	95
Measuring Genetic Diversity	96
Measuring Species Diversity	98
Assessing the Value of Marine Biodiversity	100
Analytical Methods Relevant to the Human Dimensions of Marine Biodiversity	101
Methods of Social Science Analysis	102
Understanding the Human Context	102
Understanding Human Interactions	103
Understanding Costs and Benefits of Biodiversity Protections	104
Understanding Impacts of Actions to Protect Marine Biodiversity	105
Marine and Coastal Biodiversity Indicators (SINP-Mer Jointly Operated by Ifremer, MNHN and AAMP)	105
6 Drivers of Changes in Biodiversity and its Uses	113
Environmental Drivers: A Working Framework	113
Evolutionary Timescales	114
Ecological Timescales	114
Causes of Pressures	115
Importance of Disturbance: Biodiversity, Resilience and Robustness of Marine Ecosystems	116
The Scientific Challenge	116
Knowns	117
Unknowns	119
Human Drivers	120
Knowns	120
Unknowns	125
Social	127
Cultural	128
7 Integrated Scenarios and Policies	129
Policies and Decision Support	129
Developing Scenarios	130
Qualitative Learning from Past Experience	130
Quantitative Learning from Past Experience	132
Learning from Analytical and Mathematical Reasoning	132

Learning from Virtual Experiments (in silico)	134
Learning by Doing.....	134
Quantitative Methods, Models and Integrated Assessment	134
Coupling Ecological, Environmental and Socioeconomic Models.....	135
Diversity vs. Homogeneity of Models.....	137
Modelling: Scenarios and Assessment Challenges.....	137
Complex Dynamic Systems	138
Multi-Criteria Issues.....	138
Sustainability and Intergenerational Equity	139
Precaution, Risk Analysis and Management	140
Adaptive Management.....	141
Governance, Coordination and Compliance.....	142
8 Research Needs.....	145
The Framework: Environmental Research.....	146
Research Systems	147
Sustaining Ecosystem Services	148
Naturalistic Dimensions	149
Linking Ecological Functions and Ecosystem Services.....	149
Measuring the Genetic Basis of Biodiversity	151
Differentiating Evolutionary and Ecological Time Scales	152
Putting Fish Stocks Back in Their Ecosystems	152
Impacts of Physical Amenities and Pollution on Biodiversity	153
Human Dimensions of Research.....	154
Data Issues.....	154
Cultures, Institutions, Appropriation	155
Demographics and Economics	156
Decision-Making Processes.....	157
Developing Modelling: A Summarising Approach	157
Sources	161
Databases.....	161
Group of experts.....	167

Biodiversity in the Marine Environment

Goulletquer, P.; Gros, P.; Boeuf, G.; Weber, J.

2014, XXI, 198 p. 75 illus., 71 illus. in color., Hardcover

ISBN: 978-94-017-8565-5
