Part I General Problems

1	Measurability	3
1.1	What Can Be Measured?	3
1.2	Counting and Measuring	4
1.3	Physical Measurement.	7
1.4	Psychophysical Measurement.	10
1.5	The Debate at the British Association for the Advancement of Science.	12
1.6	A Turning Point: Stevens's Twofold Contribution	13
1.6.1	Direct Measurement of Percepts	13
1.6.2	Classification of Measurement Scales	14
1.7	The Representational Theory	17
1.8	The Role of the Measuring System.	18
1.9	The Proposed Approach	19
	References	21
2	Uncertainty	23
2.1	Why are Measurement Results not Certain?	23
2.2	Historical Background.	24
2.2.1	Gauss, Laplace and the Early Theory of Errors	24
2.2.2	Fechner and Thurstone: The Uncertainty of Observed Relations.	26
2.2.3	Campbell: Errors of Consistency and Errors of Methods	30
2.2.4	The Contribution of Orthodox Statistics	31
2.2.5	Uncertainty Relations in Quantum Mechanics	32
2.2.6	The Debate on Uncertainty at the End of the Twentieth Century.	34
2.3	The Proposed Approach	36
2.3.1	Uncertainty Related to the Measurement Scale and to Empirical Relations.	37
2.3.2	Uncertainty Related to the Measurement Process and the Measuring System.	39

2.3.3	Information Flux Between the Objects(s) and the Observer	40
	References	41

Part II The Theory

3	The Measurement Scale: Deterministic Framework	45
3.1	What is the Meaning of Measurement?	45
3.2	The General Framework	47
3.2.1	Overview	47
3.2.2	Some Formal Statements	48
3.2.3	Overview of the Main Types of Scales	49
3.3	Ordinal Scales	49
3.3.1	Motivations for Dealing with Ordinal Scales	49
3.3.2	Serialising and Numbering Objects	50
3.3.3	Representation for Order Structures	52
3.4	Interval Scales	55
3.4.1	Dealing with Intervals	55
3.4.2	Measuring Differences	56
3.4.3	Representation for Difference Structures	59
3.5	Ratio Scales for Intensive Structures	65
3.5.1	Is Empirical Addition Necessary for Establishing a Ratio Scale?	65
3.5.2	Extensive and Intensive Quantities	66
3.5.3	Scaling Intensities	67
3.5.4	Representation for Intensive Structures	70
3.6	Ratio Scales for Extensive Structures	73
3.6.1	The Role of Additivity in Measurement	73
3.6.2	Representation for Extensive Structures	76
3.7	Derived Scales	80
3.7.1	Derived Versus Fundamental Scales	80
3.7.2	Representation for Derived Scales	81
3.7.3	Systems of Quantities	85
3.7.4	The International System of Metrology	86
3.8	Summary	88
	References	90
4	The Measurement Scale: Probabilistic Approach	93
4.1	Working with Probability	93
4.1.1	The Nature of Probability	93
4.1.2	The Rules of Probability	94
4.1.3	An Illustrative Example	97
4.1.4	Probability as a Logic	100

4.1.5	Probabilistic Variables	100
4.1.6	Probabilistic Functions	102
4.1.7	Probabilistic Relations.	103
4.1.8	Continuity	105
4.1.9	Non-probabilistic Approaches to Measurement Uncertainty	106
4.2	Probabilistic Representations	107
4.3	Probabilistic Fundamental Scales	108
4.3.1	Order Structures	108
4.3.2	Difference Structures	110
4.3.3	Intensive Structures.	110
4.3.4	Extensive Structures	111
4.4	Probabilistic Derived Scales.	111
4.4.1	An Introductory Example	111
4.4.2	Probabilistic Cross-Order Structures	113
4.4.3	Probabilistic Cross-Difference Structures.	115
4.5	Summary.	115
	References	116
5	The Measurement Process	117
5.1	How Can We Measure?	117
5.2	Deterministic Model of the Measurement Process.	121
5.3	Probabilistic Model of the Measurement Process	124
5.4	Probability Space of the Measurement Process.	127
5.4.1	From Numbers to Numbers	128
5.4.2	From Things to Numbers.	132
5.5	Systematic Effects	137
5.6	Continuous Versus Discrete Representations	142
5.7	Overall Probabilistic Framework and Generalisations	144
	References	145
6	Inference in Measurement	147
6.1	How Can We Learn from Data?.	147
6.2	Probabilistic Models and Inferences	148
6.2.1	The Bernoullian Model	148
6.2.2	A Classification of Probabilistic Inferences	149
6.3	Measurement Evaluation	155
6.4	Measurement Verification	160
6.5	Summary.	161
	References	162
7	Multidimensional Measurement	163
7.1	What Happens when Moving from One to Two Dimensions.	163

7.2	Distances and Metrics	165
7.3	Nominal and Distance Structures	167
7.3.1	Nominal Structures	167
7.3.2	Distance Structures	168
7.4	Probabilistic Representation for Nominal and Metric Structures	172
7.5	Additional Notes on Multidimensional Measurement	174
	References	175

Part III Applications

8	Perceptual Measurement	179
8.1	Measuring the Impossible	179
8.2	Measuring the Intensity of a Sensation	181
8.2.1	Premise: Some Acoustic Quantities.	181
8.2.2	Loudness of Pure Tones	182
8.2.3	Loudness of Pink Noise	188
8.2.4	Direct Measurement of Loudness: Master Scaling . . .	190
8.2.5	Direct Measurement of Loudness: Robust Magnitude Estimation	193
8.2.6	Indirect Measurement: Loudness Model	198
8.3	State of the Art, Perspective and Challenges	199
	References	203
9	The Evaluation of Measurement Uncertainty.	205
9.1	How to Develop a Mathematical Model of the Measurement Process.	205
9.1.1	Statement of the Problem	205
9.1.2	Linear Models	206
9.1.3	Systematic Effects and Random Variations	207
9.1.4	Observability	209
9.1.5	Low-Resolution Measurement	210
9.1.6	Practical Guidelines	213
9.1.7	Hysteresis Phenomena.	214
9.1.8	Indirect Measurement	216
9.2	Measurement Software	217
9.3	A Working Example.	219
	References	221
10	Inter-Comparisons and Calibration.	223
10.1	A Worldwide Quality Assurance System for Measurement . . .	223
10.2	A Probabilistic Framework for Comparisons	224
10.2.1	How Key Comparisons Work	224

10.2.2	Checking the Individual Results	224
10.2.3	The Paradigm of the Probabilistic Scale	226
10.2.4	Summary of the Proposed Approach	230
10.2.5	A Working Example	231
10.3	Calibration	232
	References	236
11	Measurement-Based Decisions	237
11.1	The Inferential Process in Conformance Assessment	237
11.2	A Probabilistic Framework for Risk Analysis	238
11.2.1	Insight into Conformance Assessment	238
11.2.2	Probabilistic Framework	242
11.2.3	Illustrative Example	243
11.3	Software for Risk Analysis	246
11.4	Chemical Analysis	246
11.5	Legal Metrology	248
11.6	A Working Example	249
	References	251
12	Dynamic Measurement	253
12.1	Dynamic Measurement: An Introduction	253
12.2	Direct Dynamic Measurement	254
12.2.1	A Probabilistic Framework for Direct Dynamic Measurement	254
12.2.2	Evaluation of the Uncertainty Generated by Dynamic Effects in Instrumentation	261
12.3	Indirect Dynamic Measurement: Spectrum Measurement	265
	References	271
	Appendix A: Glossary and Notation	273
	Index	281

Measurement and Probability

A Probabilistic Theory of Measurement with Applications

Rossi, G.B.

2014, XIII, 286 p. 82 illus., Hardcover

ISBN: 978-94-017-8824-3
