## Part I Critical Review of the Orthodox Economy

<b>1</b>	<b>Paradigms</b>	3
1	The Collision Process with Nature Is Ignored	3
2	Presentation and Critique of the Dominant Paradigm	4
2.1	View of Nature and of the Position of Mankind in It	5
2.2	Linear and Mechanistic Thinking	6
2.3	The View of Human Beings: 'Homo Economicus'	7
2.4	View of the Economy	12
3	Sustainability Paradigm	15
<b>2</b>	<b>The Commodification of Nature and Its Consequences</b>	19
1	The Efficiency of a Free Market	19
2	The Emergence of a Capitalist Market and the Consequences	21
3	The Commodification of Nature	22
4	Free Market and Natural Resources	24
4.1	The Impact on Natural Resources by Establishment of a Capitalist Market	24
4.2	The Scarcity of Resources in Classical and Neoclassical Thought	29
<b>3</b>	<b>Foundations and Instruments of Environmental Economics</b>	35
1	Polluter Pays Principle	36
2	The Theory of Environmental Valuation	37
3	The Externality Concept	38
4	Internalisation of Externalities	40
4.1	Environmental Valuation Methods	40
4.2	Analysis	42
4.3	It Is Not Possible to Measure the 'Environmental Optimal'	44
5	Market Tools for Internalising Externalities	45
5.1	Environmental Taxes	46
5.2	Marketable Pollution/Emission Permit Systems	48

<b>4</b>	<b>Free Market and Sustainability</b> .....	53
1	Contradictions Between Nature Monetisation and Economic Liberalisation .....	53
2	Contradiction Between Liberalisation and Sustainability .....	54
3	The Contradictions Between the GATT-WTO System and Sustainability .....	56
3.1	The GATT-WTO System .....	56
3.2	The Sources of Contradiction .....	57
4	Contradiction Between WTO Rulings and Multilateral Environmental Agreements .....	60
4.1	Multilateral Environmental Agreements (MEA) .....	60
4.2	Outcomes .....	61
5	Government Proposals to Change the WTO's Role in Order to Protect Nature .....	62
5.1	Acknowledgment of Principles .....	62
5.2	Regulatory Framework .....	63
5.3	Financing .....	65
5.4	Institutions .....	66
6	The Retreat of Globalization .....	66
<b>5</b>	<b>Sustainable Development in the Brundtland Report and Its Distortion</b> .....	69
1	Introduction .....	69
2	Developmental Economics .....	70
3	Sustainable Development According to the Brundtland Report .....	71
4	Orthodox Interpretations of the Concept of Sustainable Development .....	74
4.1	The Theory of the Sustainability Triangle .....	74
4.2	The Theory of Dematerialization .....	76
5	Concluding Remarks .....	81
 <b>Part II Principles and Instruments for Sustainability</b>		
<b>6</b>	<b>Sustainability of Social-Economical Systems</b> .....	85
1	Introduction .....	85
2	Sustainability of Complex Adaptive Systems of Nature .....	86
2.1	Abiotic Functions .....	87
2.2	Biotic Function .....	88
2.3	Functions of Maintenance of Vital Constants .....	92
3	Unsustainability of the Capitalist System .....	93
4	Sustainability Principles .....	94
<b>7</b>	<b>Transformability</b> .....	99
1	Adaptive Cycle of Ecosystems .....	99
2	Applicability to Socio-economic Systems of the Concepts and Factors of the Natural Adaptive Cycle .....	103

2.1	The Usefulness of the Adaptive Cycle for Socio-economic Systems .....	103
2.2	The Resilience Concept .....	105
3	The Transformability of Socio-economic Systems.....	106
3.1	The Concept of Transformability .....	106
3.2	Transformability Factors .....	108
4	Conclusion .....	111
<b>8</b>	<b>Instruments for Sustainability: Strategic Planning and Ecological Tax Reform .....</b>	<b>113</b>
1	Genesis and Premises of the Strategic Planning of Sustainability.....	113
1.1	Analysis of the Fulfilment of the Premises in the Case of the NSDS .....	114
1.2	The SDS of the European Union.....	118
2	Environmental Tax Reforms and Ecological Tax Reform .....	120
2.1	Environmental Tax Reforms .....	120
2.2	Concepts of Fiscal Reforms in Relation to Sustainability .....	121
2.3	Overview of the Development of an ETR .....	125
3	Forecast Evolution of the ETR .....	128
<b>9</b>	<b>Science and Technology for Sustainability .....</b>	<b>129</b>
1	Criticism of the Paradigm of the Current Dominant Science and Technological Model .....	129
2	Towards a Science for Sustainability .....	135
3	Towards Sustainable Technological Systems.....	139
3.1	Overview of Some Concepts and Technologies Which Are Placed in the Field of the Dominant Paradigm .....	140
3.2	Analysis of Transforming Concepts and Technologies .....	144
<b>Part III Sustainable Production and Consumption</b>		
<b>10</b>	<b>The Limits of Fossil Fuels.....</b>	<b>151</b>
1	Peak Oil .....	152
1.1	Reserves .....	152
1.2	The Main Agents .....	153
1.3	Supply .....	155
1.4	Demand .....	156
1.5	Prices .....	158
1.6	Peak .....	160
1.7	Extra-Geological Limiting Factors .....	163
2	Peak Natural Gas .....	164
3	Peak Coal.....	168
4	Fossil Fuels and Climate Change .....	170

<b>11</b>	<b>Repercussions of the End of the Oil Age</b>	173
1	The Geostrategic Struggle for the Control of Essential Resources ....	173
1.1	US .....	174
1.2	Russia .....	175
1.3	European Union .....	176
1.4	China .....	177
1.5	The Foreseeable Future .....	177
2	Analysis of the Current Crisis and of the General Impact of Peak Oil .....	178
2.1	Causes of the Crisis and of the Unequal Impact on Different Countries.....	178
2.2	Analysis of the Economic Impact of Peak Oil .....	180
3	Structural Effects .....	185
3.1	Trade .....	185
3.2	Financial .....	187
3.3	International Monetary System (IMS).....	188
4	Sectoral Effects .....	190
4.1	Industry .....	190
4.2	Agriculture.....	192
<b>12</b>	<b>Towards Sustainable Transport at the End of the Fossil Fuel Era</b> .....	195
1	The Dominant Transport Model .....	196
1.1	The Consolidation Process .....	196
1.2	Wide Range of Applications of the Dominant Transport Model Between Countries .....	198
2	Transport Economics .....	201
3	Changes in the Transport Model Due to Escalating Oil Prices Produced During the 2002–2008 Period .....	203
4	Critical Analysis of the EU Transport Strategy .....	207
5	Some Proposals for Advancing Towards Sustainable Transport in the EU .....	212
<b>13</b>	<b>Solar Economy Elements</b> .....	215
1	Introduction .....	215
2	Expansion Strategies of Renewable Energies .....	217
3	Efficiency.....	221
4	Main Technological Systems.....	221
4.1	Wind.....	221
4.2	Photovoltaic.....	225
4.3	Solar Thermal Power .....	228
5	Grids and Energy Storage .....	231
<b>14</b>	<b>Renewable Hydrogen Economy</b> .....	235
1	Agro-fuel .....	235
2	Renewable Electricity – Electric Car .....	240

3	Hydrogen .....	241
4	Fuel Cells .....	242
4.1	Strategies for Fuel Cell Expansion .....	243
4.2	Fuel Cell Development .....	245
<b>15</b>	<b>Societies in Energy Emergency .....</b>	<b>251</b>
1	Origin, Development and Characteristics .....	251
2	Comparative Analysis of the Two Movements .....	254
3	Steps in the Process of Designing and Implementing Strategies .....	257
3.1	Resolutions and Declarations .....	258
3.2	Analysis of Vulnerability .....	259
3.3	Contingency Plans .....	261
3.4	Strategies .....	262
4	Final Remarks .....	268
<b>16</b>	<b>Circular Economy: Materials Scarcity, European Union</b>	
	<b>Policy and Foundations of a Circular Economy .....</b>	<b>269</b>
1	Concepts and Principles for a Circular Economy .....	269
2	Analysis of Critical Metals .....	271
2.1	Geological Scarcity .....	272
2.2	Other Scarcity Factors .....	275
2.3	Recycling .....	278
3	Analysis of Non-metallic Materials .....	279
3.1	Material from Construction and from Demolition .....	279
3.2	Materials and Substances from the Chemical Industry .....	280
3.3	Materials from the Petrochemical Industry .....	281
3.4	Agro-materials .....	282
4	The EU's Broad Policy on Materials .....	284
5	Basis for a Circular Economy Strategy .....	286
<b>17</b>	<b>Industrial Ecology .....</b>	<b>289</b>
1	The Industrial Ecology Concept .....	289
2	Material Flow Analysis and Accounting of Socioeconomical Systems .....	291
2.1	Methodology .....	291
2.2	European Union Metabolism: Material Flow Accounts .....	294
3	Industrial Symbioses .....	297
3.1	The Concept and Overall Perspective of the Field .....	297
3.2	Terms Used in the Application of Industrial Symbiosis .....	298
3.3	The Role of Government Policy in the Promotion of Industrial Symbiosis .....	300
3.4	Industrial Ecosystem Taxonomy .....	302
<b>18</b>	<b>Basis for an Eco-effective and Integrated Product Strategy .....</b>	<b>309</b>
1	Integrated Product Policy .....	309
1.1	Overview .....	309
1.2	Contribution to the IPP of Extended Producer Responsibility ..	311

2	Inputs for an Integrated and Eco-effective Product Strategy .....	315
2.1	Overview .....	315
2.2	Product-Service Systems .....	316
2.3	Design of EC-Efficient Products by Means of the “Intelligent Material Pooling” Methodology .....	327
<b>19</b>	<b>Sustainable Consumption</b> .....	<b>329</b>
1	An Unsustainable, Unfair and Pathological Model of Consumption ..	329
2	Systems That Determine Consumption Patterns .....	330
2.1	Motivation Systems .....	331
2.2	Systems of Provision .....	334
2.3	Systems of Access .....	337
3	Elements of a Sustainable Consumption Strategy .....	338
3.1	General Aspects .....	338
3.2	Actions on Motivation Systems .....	340
3.3	Actions on Provision Systems .....	341
3.4	Actions on the Access Systems .....	350
 <b>Part IV Evaluation of Transformability</b>		
<b>20</b>	<b>Overall Evaluation of Transformability and Its Trend</b> .....	<b>355</b>
1	Potential .....	356
1.1	Natural Potential .....	356
1.2	Potential from Social Sources .....	357
2	Connectivity .....	360
2.1	Hierarchy .....	361
2.2	Fluxes .....	362
2.3	Paradigms .....	364
3	Panarchy .....	365
4	An Attempt to Evaluate Global Transformability and Its Trend .....	366
 <b>Bibliography</b> .....		<b>369</b>
