

Contents

Part I Mathematical Analysis

1	On the Mathematics of the Law of Mass Action	3
	Leonard Adleman, Manoj Gopalkrishnan, Ming-Deh Huang, Pablo Moisset and Dustin Reishus	
2	Structural Analysis of Biological Networks	47
	Franco Blanchini and Elisa Franco	
3	Guaranteeing Spatial Uniformity in Reaction-Diffusion Systems Using Weighted L^2 Norm Contractions.	73
	Zahra Aminzare, Yusef Shafi, Murat Arcak and Eduardo D. Sontag	
4	Robust Tunable Transcriptional Oscillators Using Dynamic Inversion	103
	Vishwesh V. Kulkarni, Aditya A. Paranjape and Soon-Jo Chung	
5	Towards the Modular Decomposition of the Metabolic Network.	121
	Anne Goelzer and Vincent Fromion	
6	An Optimal Control Approach to Seizure Detection in Drug-Resistant Epilepsy	153
	Sabato Santaniello, Samuel P. Burns, William S. Anderson and Sridevi V. Sarma	

Part II Biological Network Modelling

7	Model Reduction of Genetic-Metabolic Networks via Time Scale Separation	181
	Juan Kuntz, Diego Oyarzún and Guy-Bart Stan	

8	Networks, Metrics, and Systems Biology	211
	Soumen Roy	
9	Understanding and Predicting Biological Networks Using Linear System Identification	227
	Alberto Carignano, Ye Yuan, Neil Dalchau, Alex A. R. Webb and Jorge Gonçalves	
10	Model Checking in Biology	255
	Jasmin Fisher and Nir Piterman	
11	Computational Design of Informative Experiments in Systems Biology	281
	Alberto Giovanni Busetto, Mikael Sunnåker and Joachim M. Buhmann	
12	Predicting Phenotype from Genotype Through Reconstruction and Integrative Modeling of Metabolic and Regulatory Networks	307
	Sriram Chandrasekaran	
	Index	327

A Systems Theoretic Approach to Systems and
Synthetic Biology I: Models and System
Characterizations

Kulkarni, V.; Stan, G.-B.; Raman, K. (Eds.)

2014, XVIII, 332 p. 84 illus., 41 illus. in color., Hardcover

ISBN: 978-94-017-9040-6
