Contents

1 Introduction 1

Part I Computational Methods

2 Fundamental Mathematics 5
2.1 Complex Numbers 5
2.2 Vectors 6
2.3 Matrices 7
2.4 Graphs 9
References 10

3 Solving Linear Systems of Equations 11
3.1 Direct Solvers 12
3.1.1 LU Decomposition 12
3.1.2 Solution Accuracy 13
3.1.3 Algorithmic Complexity 13
3.1.4 Fill-in and Matrix Ordering 13
3.1.5 Incomplete LU decomposition 14
3.2 Iterative Solvers 14
3.2.1 Krylov Subspace Methods 15
3.2.2 Optimality and Short Recurrences 16
3.2.3 Algorithmic Complexity 16
3.2.4 Preconditioning 16
3.2.5 Starting and Stopping 18
References 19

4 Solving Nonlinear Systems of Equations 21
4.1 Newton–Raphson Methods. 22
4.1.1 Inexact Newton 23
4.1.2 Approximate Jacobian Newton 24
4.1.3 Jacobian-Free Newton 24

4.2 Newton–Raphson with Global Convergence . . . 25
4.2.1 Line Search . . . 25
4.2.2 Trust Regions . . . 27
References . . . 28

5 Convergence Theory . . . 29
5.1 Convergence of Inexact Iterative Methods . . . 29
5.2 Convergence of Inexact Newton Methods . . . 33
5.2.1 Linear Convergence . . . 37
5.3 Numerical Experiments . . . 38
5.4 Applications . . . 42
5.4.1 Forcing Terms . . . 42
5.4.2 Linear Solver . . . 43
References . . . 44

Part II Power System Analysis

6 Power System Analysis . . . 47
6.1 Electrical Power . . . 49
6.1.1 Voltage and Current . . . 49
6.1.2 Complex Power . . . 50
6.1.3 Impedance and Admittance . . . 51
6.1.4 Kirchhoff's Circuit Laws . . . 52
6.2 Power System Model . . . 52
6.2.1 Generators, Loads, and Transmission Lines . . . 53
6.2.2 Shunts and Transformers . . . 54
6.2.3 Admittance Matrix . . . 55
6.3 Power Flow . . . 56
6.4 Contingency Analysis . . . 57
References . . . 57

7 Traditional Power Flow Solvers . . . 59
7.1 Newton Power Flow . . . 59
7.1.1 Power Mismatch Function . . . 60
7.1.2 Jacobian Matrix . . . 61
7.1.3 Handling Different Bus Types . . . 62
7.2 Fast Decoupled Load Flow . . . 63
7.2.1 Classical Derivation . . . 64
7.2.2 Shunts and Transformers . . . 66
7.2.3 BB, XB, BX, and XX . . . 67
7.3 Convergence and Computational Properties . . . 71
7.4 Interpretation as Elementary Newton–Krylov Methods . . . 71
References . . . 72

8 Newton–Krylov Power Flow Solver 73
8.1 Linear Solver 73
8.2 Preconditioning 74
8.2.1 Target Matrices 75
8.2.2 Factorisation 75
8.2.3 Reactive Power Limits and Tap Changing 76
8.3 Forcing Terms 77
8.4 Speed and Scaling 78
8.5 Robustness 79
References 80

9 Contingency Analysis 83
9.1 Simulating Branch Outages 83
9.2 Other Simulations with Uncertainty 86
References 86

10 Numerical Experiments 87
10.1 Factorisation 87
10.1.1 LU Factorisation 88
10.1.2 ILU Factorisation 91
10.2 Forcing Terms 92
10.3 Power Flow 95
10.3.1 Scaling 98
10.4 Contingency Analysis 100
References 102

11 Power Flow Test Cases 103
11.1 Construction 103
References 105
