

Contents

1	The April 20, 2013, Lushan, Sichuan, China, Earthquake: An Overview	1
1.1	Parameters of the Earthquake	1
1.2	Disasters of the Earthquake and Timeliness of the Emergency Response	6
1.2.1	Emergency Response to the Earthquake	6
1.2.2	Disasters of the Lushan Earthquake Testing the Wenchuan Reconstruction	9
1.3	Studies on the Earthquake	10
1.4	Summary	11
	References	11
2	The Field Investigation of the Earthquake	13
2.1	Scientific Issues Related to the Field Investigation	13
2.2	The Field Investigation of the 2013 Lushan Earthquake	16
2.2.1	Field Investigation in the Stage of Earthquake Emergency	16
2.2.2	Post-Earthquake Field Investigation and Studies	18
2.3	Concluding Remarks	21
	References	21
3	Tectonic Setting of the Earthquake	23
3.1	Geodynamic Background	23
3.2	The Seismo-Tectonics of the Lushan Earthquake: Different Views, and Their Evidences	24
3.2.1	Surface Rupture and Active Faults	24
3.2.2	Deep Structure of the Vicinity of the Seismic Source	26
3.2.3	The Lushan Puzzle	28
3.3	Summary and Discussion	28
3.3.1	The Blind-Lame Combination of Seismology and Tectonics	28
3.3.2	The Role of the ‘Missing Earthquakes’ in Seismic Hazard Assessment	30
	References	30

4	Aftershock Sequence: Monitoring and Analysis	33
4.1	Introduction	33
4.2	Aftershock Monitoring	34
4.3	Relocation of the Aftershocks	36
4.4	Statistical Analysis of Sequence Parameters by Fitting the ETAS Model	37
4.4.1	The Epidemic-Type Aftershock Sequence Model	37
4.4.2	ETAS Parameters in the Early Stage of the Lushan Earthquake Sequence	39
4.5	Summary and Discussion	40
	References	44
5	An Aftershock of the 2008 Wenchuan Earthquake?	47
5.1	Introduction: Pros and Cons Regarding to Whether the Lushan Earthquake is One of the Late Aftershocks of the Wenchuan Earthquake	47
5.1.1	The Lushan Earthquake is an Aftershock of the Wenchuan Earthquake	48
5.1.2	The Lushan Earthquake is Not an Aftershock of the Wenchuan Earthquake	48
5.1.3	The Lushan Earthquake is a ‘New’ Mainshock	48
5.1.4	The Lushan Earthquake is Not a New Mainshock	49
5.2	The 2008 Wenchuan Earthquake, and Its Aftershocks	49
5.2.1	The May 12, 2008, Wenchuan Earthquake	49
5.2.2	The Aftershocks of the Wenchuan Earthquake	50
5.3	The Relationship Between the Lushan Earthquake and the Wenchuan Earthquake from a Statistical Viewpoint	54
5.3.1	Space-Time Epidemic Type Aftershock Sequence Model and Stochastic Declustering Method	54
5.3.2	Probability for the Lushan Earthquake as an Aftershock, and Contribution of the Wenchuan Earthquake to the Occurrence of the Lushan Earthquake	55
5.4	Discussion without Conclusion	55
	References	56
6	Scientific Products Serving the Earthquake Emergency	59
6.1	Introduction	59
6.2	Timeliness and Contents of the Scientific Products	61
6.2.1	Quickly Determined Parameters	61
6.2.2	Timeliness of the Scientific Products and On-going Modification	62
6.3	Maintenance and Quality Control of the Scientific Products	63
6.3.1	Development of the Information Service System	63
6.3.2	The Infrastructure and Organization Bases for the Seismological Information Service	64

6.4	Discussion: From Basic Science to Application— The Technology Readiness Level Related to the Seismological Information Service	65
6.5	Summary	69
	References	69
7	An Earthquake Occurred in the Time of the Internet and the Microblog/Twitter	71
7.1	The Microblog (<i>Weibo</i>)	71
7.1.1	Introduction	71
7.1.2	The Performance of the Microblogs in Reporting the Lushan Earthquake	72
7.1.3	Discussion	74
7.2	Death Toll Message from the Internet	74
7.2.1	Introduction	74
7.2.2	Death Toll Message and Its Time Dependence	75
7.2.3	Result and Discussion	75
7.3	Classroom Evacuation Recordings	77
7.3.1	Introduction	77
7.3.2	Observation	78
7.3.3	Discussion	80
7.4	Summary	80
	References	81
8	Locally Characterized Seismic Destruction Phenomenology	83
8.1	Seismic Intensity and Strong Ground Motion	83
8.2	Destruction Phenomenology	84
8.2.1	Residential Buildings	85
8.2.2	Public Buildings	88
8.3	Lifeline Systems	91
8.3.1	Transportation	92
8.3.2	Electricity, Telecommunication, Water Supply and Sewage	94
	References	96
9	Time-Dependent Seismic Hazard of the Southern Longmenshan Fault Zone and the Sichuan-Yunnan Region: Earthquake Predictability and Its Limit	99
9.1	The Lushan Earthquake in a CSEP Testing Region	99
9.2	Predictive Assessments of Time-Dependent Seismic Hazard Priori to the Lushan Earthquake	101
9.3	Forecast of the Lushan Earthquake? Forward Predictive Statements and Retrospective Case Studies	103
9.3.1	Predictive Statements in Academic Publications	103
9.3.2	Retrospective Case Reports of the Precursor-Like Anomalies	104

9.4 Discussion on the Future: A RTP-Like Analysis Focusing on the Southern Longmenshan Fault Zone	104
References	107
10 Concluding Remarks Without Conclusions: Earthquake and Disaster Phenomenology not yet Included in our Textbooks	111
Appendix 1: Studies on the Lushan Earthquake	113
Appendix 2: Forecasting the Strong Aftershock Hazard Following the May 12, 2008, Wenchuan Earthquake: A Personal Retrospective of the International Component	127

Earthquake Phenomenology from the Field

The April 20, 2013, Lushan Earthquake

Wu, Z.; Jiang, C.; Li, X.; Li, G.; Ding, Z.

2014, XI, 136 p. 70 illus., 63 illus. in color., Softcover

ISBN: 978-981-4585-13-2
