

Contents

1	Why Quadratic Diophantine Equations?	1
1.1	Thue's Theorem	1
1.2	Hilbert's Tenth Problem	2
1.3	Euler's Concordant Forms	4
1.4	Trace of Hecke Operators for Maass Forms	5
1.5	Diophantine Approximation and Numerical Integration	5
1.6	Threshold Phenomena in Random Lattices and Reduction Algorithms	6
1.7	Standard Homogeneous Einstein Manifolds and Diophantine Equations	6
1.8	Computing Self-Intersections of Closed Geodesics	7
1.9	Hecke Groups and Continued Fractions	7
1.10	Sets of Type (m, n) in Projective Planes	8
2	Continued Fractions, Diophantine Approximation, and Quadratic Rings	9
2.1	Simple Continued Fractions	10
2.1.1	The Euclidean Algorithm	10
2.1.2	Uniqueness	12
2.1.3	Infinite Continued Fractions	13
2.1.4	Irrational Numbers	16
2.1.5	Approximations to Irrational Numbers	17
2.1.6	Best Possible Approximations	19
2.1.7	Periodic Continued Fractions	21
2.2	Units and Norms in Quadratic Rings	27
2.2.1	Quadratic Rings	27
2.2.2	Norms in Quadratic Rings	27
3	Pell's Equation	31
3.1	History and Motivation	31
3.2	The General Solution by Elementary Methods	33
3.3	The General Solution by Continued Fractions	37

3.4	The General Solution by Quadratic Rings.....	40
3.5	The Equation $ax^2 - by^2 = 1$	44
3.6	The Negative Pell Equation and the Pell–Stevenhagen Constants ..	46
4	General Pell’s Equation	55
4.1	General Theory	55
4.2	Solvability of General Pell’s Equation	61
4.2.1	PDP and the Square Polynomial Problem.....	62
4.2.2	The Legendre Test	63
4.2.3	Legendre Unsolvability Tests	64
4.2.4	Modulo n Unsolvability Tests.....	67
4.2.5	Extended Multiplication Principle	68
4.3	An Algorithm for Determining the Fundamental Solutions Based on Simple Continued Fractions (The LMM Method)	69
4.3.1	An Algorithm for Solving the General Pell’s Equation (4.1.1)	71
4.4	Solving the General Pell’s Equation	74
4.4.1	The PQa Algorithm for Solving Pell’s and Negative Pell’s Equations	74
4.4.2	Solving the Special Equations $x^2 - Dy^2 = \pm 4$	75
4.4.3	Structure of Solutions to the General Pell’s Equation	78
4.4.4	Solving the Equation $x^2 - Dy^2 = N$ for $N < \sqrt{D}$	80
4.4.5	Solving the Equation $x^2 - Dy^2 = N$ by Brute-Force Search	80
4.4.6	Numerical Examples	80
4.5	Solvability and Unsolvability of the Equation $ax^2 - by^2 = c$	84
4.6	Solving the General Pell Equation by Using Quadratic Rings	89
4.7	Another Algorithm for Solving General Pell’s Equation	90
4.8	The Diophantine Equation $ax^2 + bxy + cy^2 = N$	93
4.9	Thue’s Theorem and the Equations $x^2 - Dy^2 = \pm N$	95
4.9.1	Euclid’s Algorithm and Thue’s Theorem.....	96
4.9.2	The Equation $x^2 - Dy^2 = N$ with Small D	96
4.9.3	The Equations $x^2 - 2y^2 = \pm N$	97
4.9.4	The Equations $x^2 - 3y^2 = \pm N$	99
4.9.5	The Equations $x^2 - 5y^2 = \pm N$	100
4.9.6	The Equations $x^2 - 6y^2 = \pm N$	102
4.9.7	The Equations $x^2 - 7y^2 = \pm N$	104
5	Equations Reducible to Pell’s Type Equations	107
5.1	The Equations $x^2 - kxy^2 + y^4 = 1$ and $x^2 - kxy^2 + y^4 = 4$	107
5.2	The Equation $x^{2n} - Dy^2 = 1$	111
5.3	The Equation $x^2 + (x+1)^2 + \cdots + (x+n-1)^2$ $= y^2 + (y+1)^2 + \cdots + (y+n+k-1)^2$	118
5.4	The Equation $x^2 + 2(x+1)^2 + \cdots + n(x+n-1)^2 = y^2$	124

5.5	The Equation $(x^2 + a)(y^2 + b) = F^2(x, y, z)$	126
5.5.1	The Equation $x^2 + y^2 + z^2 + 2xyz = 1$	127
5.5.2	The Equation $x^2 + y^2 + z^2 - xyz = 4$	128
5.5.3	The Equation $(x^2 + 1)(y^2 + 1) = z^2$	129
5.5.4	The Equation $(x^2 - 1)(y^2 - 1) = (z^2 - 1)^2$	129
5.6	Other Equations with Infinitely Many Solutions	130
5.6.1	The Equation $x^2 + axy + y^2 = 1$	130
5.6.2	The Equation $\frac{x^2 + 1}{y^2 + 1} = a^2 + 1$	132
5.6.3	The Equation $(x + y + z)^2 = xyz$	135
5.6.4	The Equation $(x + y + z + t)^2 = xyz t$	137
5.6.5	The Equation $(x + y + z + t)^2 = xyz t + 1$	140
5.6.6	The Equation $x^3 + y^3 + z^3 + t^3 = n$	141
6	Diophantine Representations of Some Sequences	145
6.1	Diophantine r -Representable Sequences	146
6.2	A Property of Some Special Sequences	148
6.3	The Equations $x^2 + axy + y^2 = \pm 1$	150
6.4	Diophantine Representations of the Sequences Fibonacci, Lucas, and Pell	153
6.5	Diophantine Representations of Generalized Lucas Sequences	160
7	Other Applications	169
7.1	When Are $an + b$ and $cn + d$ Simultaneously Perfect Squares?	169
7.2	Triangular Numbers	171
7.2.1	Triangular Numbers with Special Properties	171
7.2.2	Rational Numbers Representable as $\frac{T_m}{T_n}$	176
7.2.3	When Is $\frac{T_m}{T_n}$ a Perfect Square?	177
7.3	Polygonal Numbers	178
7.4	Powerful Numbers	182
7.4.1	The Density of Powerful Numbers	183
7.4.2	Consecutive Powerful Numbers	185
7.4.3	Gaps Between Powerful Numbers	187
7.5	The Diophantine Face of a Problem Involving Matrices in $M_2(\mathbb{Z})$	188
7.5.1	Nil-Clean Matrices in $M_2(\mathbb{Z})$	188
7.5.2	The General Case	190
7.5.3	The Example	194
7.5.4	How the Example Was Found	195
7.6	A Related Question	199
	References	201
