
Contents

1	Descriptive Statistics	1
1.1	Introduction to descriptive statistics	1
1.2	Measures of central location	2
1.2.1	Parking meter heist	7
1.2.2	Taxing railroad property	11
1.2.3	Capital infusions for ailing thrifts	14
1.2.4	Disproportionate-share hospitals	14
1.2.5	Hydroelectric fish kill	15
1.2.6	Pricey lettuce	16
1.2.7	Apportionment of Representatives among the states	17
1.2.8	Super-drowsy drug	18
1.3	Measures of dispersion	20
1.3.1	Texas reapportionment	25
1.3.2	Damages for pain and suffering	27
1.3.3	Ancient trial of the Pyx	28
1.3.4	<i>Bush v. Gore</i> : The U.S. Supreme Court's election 2000 decision	30
1.4	A measure of correlation	30
1.4.1	Dangerous eggs	34
1.4.2	Public school finance in Texas	36
1.5	Measuring the disparity between two proportions	38
1.5.1	Proficiency test with a disparate impact	41
1.5.2	Bail and bench warrants	42
1.5.3	Non-intoxicating beer	44
1.5.4	SIDS tragedies	45
2	How to Count	47
2.1	Permutations and combinations	47
2.1.1	DNA profiling	49
2.1.2	Weighted voting	53
2.1.3	Was the bidding rigged?	54

2.1.4	A cluster of leukemia	55
2.1.5	Measuring market concentration	55
2.2	Fluctuation theory	57
2.2.1	Tracing funds for constructive trusts	59
3	Elements of Probability	61
3.1	Some fundamentals of probability calculation	61
3.1.1	Interracial couple in yellow car	66
3.1.2	Independence assumption in DNA profiles	70
3.1.3	Telltale fibers	72
3.1.4	Telltale hairs	73
3.1.5	Randomized response technique	76
3.2	Selection effect	77
3.2.1	L'affaire Dreyfus	77
3.2.2	Searching DNA databases	78
3.2.3	Trawling in DNA Databases	79
3.3	Bayes's theorem	80
3.3.1	Rogue bus	82
3.3.2	Bayesian proof of paternity	83
3.4	Screening devices and diagnostic tests	85
3.4.1	Airport screening device	88
3.4.2	Polygraph evidence	90
3.5	Monte Carlo methods	92
3.5.1	Sentencing a heroin swallower	93
3.5.2	Cheating on multiple-choice tests	95
3.6	Foundations of probability	98
3.6.1	Relevant evidence defined	100
4	Some Probability Distributions	101
4.1	Introduction to probability distributions	101
4.2	Binomial distribution	105
4.2.1	Discrimination in jury selection	108
4.2.2	Educational nominating panel	108
4.2.3	Small and nonunanimous juries in criminal cases	110
4.2.4	Cross-section requirement for federal jury lists	113
4.2.5	Cat litter imbroglio	114
4.3	Normal distribution and a central limit theorem	116
4.3.1	<i>Alexander</i> : Culling the jury list	120
4.3.2	<i>Castaneda</i> : Measuring disparities	121
4.4	Testing statistical hypotheses	123
4.4.1	Hiring teachers	125
4.5	Hypergeometric distribution	126
4.5.1	Were the accountants negligent?	130
4.5.2	Challenged election	131
4.5.3	Election 2000: Who won Florida?	131
4.5.4	Taking the stand	138

4.6	Tests of normality	139
4.6.1	Heights of French conscripts	142
4.6.2	Silver “butterfly” straddles	143
4.7	Poisson distribution	145
4.7.1	Sulphur in the air	148
4.7.2	Vaccinations	149
4.7.3	Is the cult dangerous?	149
4.7.4	Incentive for good drivers	150
4.7.5	Epidemic of cardiac arrests	150
4.8	Geometric and exponential distributions	152
4.8.1	Marine transportation of liquefied natural gas	154
4.8.2	Network affiliation contracts	154
4.8.3	Dr. Branion’s case	155
4.9	Gamma distribution	156
5	Statistical Inference for Two Proportions	159
5.1	Fisher’s exact test of equality for two proportions	159
5.1.1	Nursing examination	161
5.2	The chi-squared and z-score tests for the equality of two proportions	162
5.2.1	Suspected specialists	168
5.2.2	Reallocating commodity trades	169
5.2.3	Police examination	169
5.2.4	Promotions at a bank	170
5.3	Confidence intervals for proportions	171
5.3.1	Confounders and confidence intervals	180
5.3.2	Paucity of Crossets	180
5.3.3	Purloined notices	181
5.3.4	Commodity exchange reports	182
5.3.5	Discharge for dishonest acts	183
5.3.6	Confidence interval for promotion test data	184
5.3.7	Complications in vascular surgery	184
5.3.8	Torture, disappearance, and summary execution in the Philippines	185
5.4	Statistical power in hypothesis testing	187
5.4.1	Death penalty for rape	189
5.4.2	Is Bendectin a teratogen?	191
5.4.3	Automobile emissions and the Clean Air Act	192
5.5	Legal and statistical significance	193
5.5.1	Port Authority promotions	195
5.5.2	State trooper literacy exam	197
5.6	Maximum likelihood estimation	198
5.6.1	Purloined notices revisited	202
5.6.2	Do microwaves cause cancer?	202
5.6.3	Peremptory challenges of prospective jurors	203

6	Comparing Multiple Proportions	207
6.1	Using chi-squared to test goodness of fit	207
6.1.1	Death-qualified jurors	209
6.1.2	Spock jurors	211
6.1.3	Grand jury selection revisited	212
6.1.4	Howland Will contest	213
6.1.5	Imanishi-Kari's case	215
6.2	Bonferroni's inequality and multiple comparisons	217
6.2.1	Wage additives and the four-fifths rule	220
6.2.2	Discretionary parole	221
6.2.3	Cheating on standardized multiple-choice tests revisited	222
6.2.4	InterMune's Actimmune	222
6.3	More measures of association: Phi-squared (ϕ^2) and tau B (τ_B)	224
6.3.1	Preventive detention	226
7	Comparing Means	231
7.1	Student's <i>t</i> -test: Hypothesis testing and confidence intervals	231
7.1.1	Automobile emissions and the Clean Air Act revisited	235
7.1.2	Voir dire of prospective trial jurors	236
7.1.3	Ballot position	238
7.1.4	Backdating stock options	238
7.1.5	Bullet lead identification	240
7.2	Analysis of variance for comparing several means	241
7.2.1	Fiddling debt collector	245
8	Combining Evidence Across Independent Strata	247
8.1	Mantel-Haenszel and Fisher methods for combining the evidence	247
8.1.1	Hiring lawyers	257
8.1.2	Age discrimination in employment terminations	258
8.1.3	Rheumatoid arthritis drug	260
8.2	Meta-analysis	262
8.2.1	Bendectin revisited	267
8.2.2	Avandia and heart attacks	268
9	Sampling Issues	271
9.1	The theory of random sampling	271
9.1.1	Selective Service draft lotteries	277
9.1.2	Uninsured motor vehicles	280
9.1.3	Mail order survey	281
9.1.4	Domino effect	283
9.1.5	NutraTaste versus NutraSweet	284

9.1.6	Cocaine by the bag	286
9.1.7	ASCAP sampling plan	287
9.1.8	Current Population Survey	289
9.1.9	Insurance payments to doctors	290
9.1.10	Wage and hour class action	292
9.2	Capture/recapture	293
9.2.1	Adjusting the census	294
10	Epidemiology	299
10.1	Introduction	299
10.2	Attributable risk	301
10.2.1	Atomic weapons tests	304
10.3	Epidemiologic principles of causation	308
10.3.1	Dalkon Shield	312
10.3.2	Radioactive “cocktails” for pregnant women	314
10.3.3	Preconception paternal irradiation and leukemia	318
10.3.4	Swine flu vaccine and Guillain-Barré Syndrome	323
10.3.5	Silicone breast implants	326
11	Survival Analysis	333
11.1	Death-density, survival, and hazard functions	333
11.1.1	Valuing charitable remainders	337
11.1.2	Defective house sidings	338
11.1.3	“Lifing” deposit accounts	338
11.1.4	Exonerations in death-sentence cases	340
11.2	The proportional hazards model	342
11.2.1	Age discrimination in employment terminations revisited	346
11.2.2	Contaminated wells in Woburn	346
11.3	Quantitative risk assessment	350
11.3.1	Ureaformaldehyde foam insulation	353
11.3.2	Ethylene oxide	355
12	Nonparametric Methods	357
12.1	The sign test	357
12.1.1	Supervisory examinations	359
12.2	Wilcoxon signed-rank test	360
12.2.1	Voir dire of prospective trial jurors revisited	361
12.3	Wilcoxon rank-sum test	361
12.3.1	Sex discrimination in time to promotion	362
12.3.2	Selection for employment from a list	363
12.3.3	Sentencing by federal judges	364
12.4	Spearman’s rank correlation coefficient	366
12.4.1	Draft lottery revisited	367

13	Regression Models	369
13.1	Introduction to multiple regression models	369
13.1.1	Head Start programs	374
13.2	Estimating and interpreting coefficients of the regression equation	376
13.2.1	Western Union's cost of equity	380
13.2.2	Tariffs for North Slope oil	381
13.2.3	Ecological regression in vote-dilution cases	382
13.2.4	Projecting airline costs	385
13.3	Measures of indeterminacy for the regression equation	387
13.3.1	Sex discrimination in academia	391
13.4	Statistical significance of the regression coefficients	394
13.4.1	Race discrimination at Muscle Shoals	397
13.5	Explanatory factors for a regression equation	398
13.6	Reading multiple-regression computer printout	404
13.6.1	Pay discrimination in an agricultural extension service	405
13.6.2	Public school financing in the State of Washington	413
13.6.3	Public school financing in Pennsylvania	416
13.7	Confidence and prediction intervals	418
13.7.1	Projecting fuel costs	419
13.7.2	Severance pay dispute	420
13.7.3	Challenged absentee ballots	422
13.7.4	Projecting airline costs revisited	423
13.8	Assumptions of the regression model	424
13.9	Transformations of variables	430
13.9.1	Western Union's cost of equity revisited	436
13.9.2	Sex- and race-coefficient models for Republic National Bank	436
14	More Complex Regression Models	439
14.1	Time series	439
14.1.1	Corrugated container price-fixing	441
14.1.2	Puppy Chow versus Chewy Morsels	442
14.1.3	Losses from infringing sales	444
14.1.4	OTC market manipulation	445
14.1.5	Fraud-on-the-market damages	448
14.1.6	Effects of capital gains tax reductions	450
14.1.7	Projecting airline costs re-revisited	455
14.2	Interactive models	456
14.2.1	House values in the shadow of a uranium plant	459
14.3	Alternative models in employment discrimination cases	462
14.4	Locally weighted regression	466
14.4.1	Urn models for Harris Bank	468

14.5	Underadjustment bias in employment regressions	469
14.5.1	Underadjustment in medical school	473
14.6	Systems of equations	475
14.6.1	Death penalty: Does it deter murder?	477
14.6.2	Neurontin off-label marketing	479
14.7	Logit and probit regression	480
14.7.1	Mortgage lending discrimination	485
14.7.2	Death penalty in Georgia	486
14.7.3	Deterring teenage smoking	495
14.8	Poisson regression	496
14.8.1	Challenger disaster	497
14.9	Negative binomial regression	499
14.9.1	New York City police stops	501
14.10	Jackknife, cross-validation, and bootstrap	503
14.10.1	Georgia death penalty revisited	505
Appendix I: Calculations and Comments on the Cases		509
