<b>1</b>	<b>Foundations of Modeling</b>	1
1.1	Simulation Versus Analytic Results	3
1.2	Stochastic Versus Deterministic Models	5
1.3	Fundamentals of Modeling	6
1.4	Validity and Purpose of Models	11
	References	14
<b>2</b>	<b>Agent-Based Modeling</b>	15
2.1	Mathematical and Computational Modeling	16
2.1.1	Limits to Modeling	17
2.2	Agent-Based Models	21
2.2.1	The Structure of ABMs	23
2.2.2	Algorithms	25
2.2.3	Time-Driven Algorithms	27
2.2.4	Event-Driven Models	28
2.3	Game of Life	31
2.4	Malaria	35
2.4.1	A Digression	38
2.4.2	Stochastic Systems	40
2.4.3	Immobile Agents	43
2.5	General Considerations When Analyzing a Model	46
2.5.1	Testing ABMs	47
2.6	Case Study: The Evolution of Fimbriation	49
2.6.1	Group Selection	49
2.6.2	A Model of Martian Mice	52
	References	78
<b>3</b>	<b>ABMs Using Repast Symphony</b>	79
3.1	Mapping Agent Concepts to Object-Oriented Languages	80
3.1.1	Hand-Coding an Agent in Java	81
3.2	The Repast Suite	84
3.2.1	Repast Symphony and ReLogo	84
3.3	The Game of Life Using ReLogo and Groovy	85

3.3.1	Creating a New Model . . . . .	86
3.3.2	The UserPatch Class . . . . .	87
3.3.3	The UserObserver Class . . . . .	89
3.3.4	Visualizing the Model . . . . .	90
3.3.5	Implementing Cell State . . . . .	92
3.4	Malaria Model in Repast Using ReLogo . . . . .	96
3.4.1	The Malaria Model . . . . .	97
3.4.2	Creating the Malaria Model . . . . .	97
3.4.3	A Basic Human Turtle Agent . . . . .	97
3.4.4	Model Parameterization . . . . .	100
3.4.5	The UserGlobalsAndPanelFactory Class . . . . .	101
3.4.6	The @ScheduledMethod Annotation . . . . .	102
3.4.7	The Human Agent . . . . .	104
3.4.8	parameters.xml and the SimBuilder Class . . . . .	107
3.4.9	The Mosquito Agent . . . . .	109
3.4.10	Runtime Memory Configuration for Large Models . . . . .	111
3.4.11	Recognizing the Common Elements of the Agents . . . . .	112
3.4.12	Data Sets and Chart . . . . .	113
3.4.13	Outputting Data with Text Sinks . . . . .	114
3.4.14	Batch Runs with Varying Parameter Values . . . . .	116
3.4.15	Summary of Concepts Relating to the Malaria Model . . . . .	118
3.4.16	Going Further with Repast Simphony . . . . .	118
	References . . . . .	118
<b>4</b>	<b>Differential Equations . . . . .</b>	<b>121</b>
4.1	Differentiation . . . . .	122
4.1.1	A Mathematical Example . . . . .	126
4.1.2	A Small Digression . . . . .	129
4.2	Integration . . . . .	131
4.3	Differential Equations . . . . .	134
4.3.1	Limits to Growth . . . . .	138
4.3.2	Steady State . . . . .	141
4.3.3	Bacterial Growth Revisited . . . . .	143
4.4	Case Study: Malaria . . . . .	146
4.4.1	A Brief Note on Stability . . . . .	152
4.5	Chemical Reactions . . . . .	157
4.5.1	Michaelis–Menten and Hill Kinetics . . . . .	159
4.5.2	Modeling Gene Expression . . . . .	165
4.6	Case Study: Cherry and Adler’s Bistable Switch . . . . .	168
4.7	Summary . . . . .	173
	References . . . . .	174

<b>5 Mathematical Tools</b>	175
5.1 A Word of Warning: Pitfalls of CAS	175
5.2 Existing Tools and Types of System	177
5.3 Maxima: Preliminaries	178
5.4 Maxima: Simple Sample Sessions	180
5.4.1 The Basics	180
5.4.2 Saving and Recalling Sessions	185
5.5 Maxima: Beyond Preliminaries	186
5.5.1 Solving Equations	187
5.5.2 Matrices and Eigenvalues	189
5.5.3 Graphics and Plotting	191
5.5.4 Integrating and Differentiating	197
5.6 Maxima: Case Studies	200
5.6.1 Gene Expression	201
5.6.2 Malaria	202
5.6.3 Cherry and Adler's Bistable Switch	203
5.7 Summary	205
References	206
<b>6 Other Stochastic Methods and Prism</b>	207
6.1 The Master Equation	209
6.2 Partition Functions	217
6.2.1 Weighted Configurations	219
6.2.2 Binding to DNA	223
6.2.3 Codon Bias in Proteins	226
6.3 Markov Chains	227
6.3.1 Absorbing Markov Chains	232
6.3.2 Continuous-Time Markov Chains	233
6.3.3 An Example from Gene Activation	235
6.4 Analyzing Markov Chains: Sample Paths	237
6.5 Analyzing Markov Chains: Using PRISM	239
6.5.1 The PRISM Modeling Language	240
6.5.2 Running PRISM	243
6.5.3 Rewards	248
6.5.4 Simulation in PRISM	252
6.5.5 The PRISM GUI	254
6.6 Examples	256
6.6.1 Fim Switching	256
6.6.2 Stochastic Versions of a Differential Equation	260
6.6.3 Tricks for PRISM Models	263
References	264

<b>7</b>	<b>Simulating Biochemical Systems</b>	265
7.1	The Gillespie Algorithms	265
7.1.1	Gillespie's Direct Method	267
7.1.2	Gillespie's First Reaction Method	267
7.1.3	Java Implementation of the Direct Method	268
7.1.4	Example Reactions	270
7.2	The Gibson–Bruck Algorithm	275
7.2.1	The Dependency Graph	276
7.2.2	The Indexed Priority Queue	277
7.2.3	Updating the $\tau$ Values	279
7.2.4	Analysis	279
7.3	A Constant Time Method	281
7.3.1	Selection Procedure	281
7.3.2	Reaction Selection	283
7.4	Practical Implementation Considerations	285
7.4.1	Data Structures—the Dependency Tree	285
7.4.2	Programming Techniques—Tree Updating	286
7.4.3	Runtime Environment	288
7.5	Reaction Equation Systems for Biological Models	288
7.6	The Tau-Leap Method	290
7.7	Delayed Stochastic Models	290
7.8	Dizzy	293
7.9	The Stochastic Genetic Networks Simulator	296
7.10	Summary	298
	References	298
<b>8</b>	<b>Biochemical Models Beyond the Perfect Mixing Assumption</b>	301
8.1	Conceptual Differences Between Perfectly Mixed and Spatial Model Systems	303
8.2	Spatial Modeling with Smoldyn	304
8.3	Basic Concepts of Spatial Modeling	305
8.4	Case Study: Change Detector I	312
8.4.1	Simulations of the System	316
8.5	Free-Change Detector II	318
8.6	Alternatives to Smoldyn	323
	References	324
