
Contents

1	The Irreversibility of Organ Injury	1
1.1	Repair vs. Regeneration	1
1.2	Tissues and Organs	1
1.3	Spontaneous and Induced Regeneration	3
1.4	Diversity of Spontaneously Regenerative Phenomena	3
1.5	A Choice of Paradigm for Studies of Regeneration	5
1.6	Selection Among Mammalian Models of Organ Injury	6
1.7	An Anatomically Well-Defined Wound	7
1.8	All Organs Can Be Irreversibly Injured	7
1.9	Nature of Injured Tissue vs. Critical Size of Defect	11
1.10	A Universal End Product of Repair Processes in All Organs?	16
1.11	Theoretical Views of Adult Failure to Regenerate	18
1.12	The Missing Organ and How to Replace It	22
1.13	Summary	24
2	Nonregenerative Tissues	27
2.1	Certain Tissues in an Organ Regenerate Spontaneously	27
2.1.1	The Epidermocentric Viewpoint in Studies of Skin Wound Healing	28
2.1.2	The Axonocentric Viewpoint in the Study of Nerve Wound Healing	30
2.1.3	Spontaneously Regenerative Tissues	34
2.2	Other Tissues Are Nonregenerative	34
2.2.1	The Dermis Is Nonregenerative	34
2.2.2	The Endoneurial Stroma Is Nonregenerative	35
2.2.3	Evidence for and Against Regeneration of Other Nonneuronal Tissues	37
2.2.4	The Stroma of Several Organs Is Nonregenerative	39
2.3	Are Basement Membranes Regenerative?	40
2.4	Regenerative Similarity of Tissues in Different Organs	42
2.5	The Tissue Triad	43
2.6	Summary	45

3	Experimental Methods I: The Anatomically Well-Defined Wound	47
3.1	Experimental Parameters for Study of Regeneration in Adults	47
3.2	The Experimental Volume: In Vitro or In Vivo?	48
3.3	The Experimental Volume: What to Exclude and What to Include	49
3.4	Generation of the Experimental Volume in an Animal Model	53
3.5	Size of Experimental Volume	56
3.6	Anatomical Boundaries	57
3.7	The Anatomically Well-Defined Defect	59
3.8	Widely Used Animal Models for Studies of Regeneration	59
3.9	Summary	61
4	Experimental Methods II. The Defect Closure Rule	63
4.1	Total Resulting Change Following Healing Versus Mechanism of Healing	63
4.2	Initial and Final States of the Wound Healing Process	64
4.3	Three Modes of Defect Closure in Organs	67
4.3.1	Closure of Defects by Contraction	68
4.3.2	Measurement of Contraction in Skin and Nerve Defects	72
4.3.3	Wound Closure by Epithelialized Scar in Skin and by Neuroma in Peripheral Nerve	74
4.3.4	Closure by Regeneration	79
4.4	The Defect Closure Rule	79
4.5	Relative Importance of the Three Modes of Defect Closure in Different Species	81
4.6	An Illustration of the Defect Closure Rule. Changes in Closure Modes with Development in a Frog Model	85
4.7	Summary	86
5	Regeneration of Skin	89
5.1	Parameters for Study of Healing Skin Defects	89
5.1.1	Anatomically Well-Defined Skin Wounds ("Defects")	90
5.1.2	Timescale of Observations	90
5.1.3	Assays of Configuration of the Final State	91
5.2	Synthesis of an Epidermis and a Basement Membrane	91
5.2.1	Morphology and Function of the Epidermis	91
5.2.2	In Vitro Synthesis of an Epidermis	92
5.2.3	Structure of Basement Membranes	96
5.2.4	Synthesis of a Skin BM	97
5.2.5	Origins of Mechanical Failure of the Dermoepidermal Junction	101
5.2.6	Synthetic Potential and Limitations of Keratinocyte Sheet Grafts	104
5.3	Synthesis of the Dermis	105
5.3.1	Structure and Function of the Dermis	105
5.3.2	In Vivo Synthesis of the Dermis Using the Cell-Free Dermis Regeneration Template	106

5.3.3	Synthetic Potential and Limitations of the Cell-Free Dermis Regeneration Template	110
5.3.4	Various Applications of Collagen Implants	111
5.4	Partial Regeneration of Skin	112
5.4.1	Structure and Function of Skin	112
5.4.2	Simultaneous Synthesis of a Dermis and an Epidermis with Keratinocyte-Seeded DRT	113
5.4.3	In Vitro to In Vivo Synthetic Routes	121
5.4.4	Evidence for Synthesis of a Partly Complete Skin Organ ...	126
5.5	Synthesis of Hair Follicles and Sebaceous Glands	127
5.6	Summary of Protocols for Synthesis of Tissues in Skin	129
5.7	Simplest Conditions for Synthesis	132
5.8	Relative Regenerative Activity of Growth Factors, Cells, and Scaffolds	132
5.9	Summary	136
6	Regeneration of a Peripheral Nerve	137
6.1	Parameters for Study of Peripheral Nerve Regeneration	137
6.1.1	Anatomically Well-defined Defects in Peripheral Nerves ...	138
6.1.2	Timescale of Observations: Short-Term and Long-Term Assays	139
6.1.3	Short-Term Quantitative Assays (<20 weeks): Frequency of Reinnervation	141
6.1.4	The Critical Axon Elongation	142
6.1.5	Long-Term Assays (>20 weeks): Fidelity of Regeneration	147
6.2	Synthesis of Myelinated Nerve Fibers	148
6.2.1	Structure of Myelinated and Nonmyelinated Axons, and of the Endoneurium	148
6.2.2	Synthetic Pathways to Myelinated Axons and Basement Membrane	152
6.2.3	Observations Related to Synthesis of an Endoneurial Stroma	154
6.3	Synthesis of a Perineurium; the Epineurium	155
6.3.1	Structure and Function of the Perineurium	155
6.3.2	The Epineurium	157
6.3.3	In Vitro and In Vivo Studies of Regeneration of a Perineurium	157
6.4	Synthesis of a Nerve Trunk	159
6.4.1	Exogenous Supply of Soluble Regulators	160
6.4.2	Schwann Cell Addition to the Tubulated Gap	162
6.4.3	Filled and Unfilled Silicone Tubes	163
6.4.4	Biodurable Tubes Other than Silicone Tubes	166
6.4.5	Degradable Synthetic Polymeric Tubes	167
6.4.6	Degradable Tubes Based on Natural Polymers	169

6.4.7	Semipermeable Tubes	173
6.4.8	Long-Term Evidence for Synthesis of a Conducting Nerve Trunk	175
6.5	Summary of Regenerative Activity of Various Tubulated Configurations	176
6.6	Summary	178
7	Minimum Reactants Required for Synthesis of Skin and Peripheral Nerves; Extension to Tissues of Other Organs.....	179
7.1	Reaction Diagrams	179
7.1.1	Reactants and Products; Irreducible Processes	180
7.1.2	Approximations Underlying the Use of Reaction Diagrams	182
7.1.3	Tabulation of Reaction Diagrams	185
7.2	Irreducible Reaction Diagrams for Synthesis of Skin	194
7.3	In Vitro Versus In Vivo Conditions for Synthesis of Tissues	198
7.4	Conditions for Synthesis of Peripheral Nerves	200
7.5	A Fresh Look at the Tissue Triad	203
7.6	Toward Simple Protocols for Synthesis of the Entire Organ. I. Modular Synthesis of Epithelial Tissues and Stroma	205
7.7	Toward Simple Protocols for Synthesis of the Entire Organ. II. Conditional Requirement for an Epithelial– Mesodermal Interaction	208
7.8	Summary	209
8	An Antagonistic Relation Between Wound Contraction and Regeneration	211
8.1	Search for the Mechanism of Regenerative Activity	211
8.2	Diverse Spontaneously Regenerating Animal Models Showing Downregulation of Wound Contraction	212
8.2.1	Antagonism Between Contraction and Regeneration in an Amphibian (Frog)	212
8.2.2	Anatomical Restriction to Wound Contraction during Healing of the Rodent Ear by Regeneration	213
8.2.3	Scarless Healing of Wounds in the Oral Mucosa of Adults	217
8.2.4	Scarless Healing in the Axolotl	217
8.3	Cell and Tissue Morphology During Spontaneous Wound Contraction	217
8.3.1	Assemblies of Oriented Contractile Cells and Tissue Deformation During Healing	218
8.3.2	Mechanics of Tissue Deformation During Spontaneous Closure of Wounds	221
8.3.3	Topographic Anatomy of Wound Contraction in Skin and Peripheral Nerves	223

8.3.4	Relation Between Wound Contraction and Scar Formation	224
8.4	Contraction Blockade and Regeneration Observed in the Presence of Active Collagen Scaffolds	227
8.4.1	Skin Wounds: Healing in the Presence of DRT	228
8.4.2	Peripheral Nerve Wounds: Healing in the Presence of DRT	231
8.4.3	The Wounded Conjunctiva: Healing in the Presence of DRT	234
8.4.4	Skin Wounds with Impaired Healing Did Not Contract and Did Not Regenerate	234
8.5	Summary Conclusions on the Relation Between Wound Contraction and Regeneration	235
9	Molecular Biology of Contraction Blockade by Active Scaffolds	237
9.1	Morphological Changes of Contractile Cell Assemblies in the Presence of DRT	238
9.2	Specific Binding of Contractile Cells to Ligands on the Surface of DRT	243
9.3	Measurement of Ligand Density in Active and Inactive Collagen Scaffolds	245
9.4	Critical Structural Features of a Collagen Scaffold that Blocks Contraction	248
9.5	Surface Biology of Specific Cell–Scaffold Interactions	252
10	The Scaffold Regeneration Paradigm and Its Consequences	253
10.1	Introduction to the Scaffold Regeneration Paradigm	253
10.2	Empirical Basis for the Regeneration Paradigm	254
10.3	A Mechanism of Regenerative Activity in the Adult Mammal	255
10.4	Similarity Between Scarless Fetal Healing and Adult Healing in the Presence of DRT	258
10.5	Regenerative Activity of Decellularized Matrices	260
10.6	Consequences to Diseased Adult Organs: The Fibrotic Liver	266
10.7	Toward a General Theory of Induced Organ Regeneration in Adults	268
	Appendix	269
