

Contents

Part I Combinatorics

1	Eulerian numbers	3
1.1	Binomial coefficients	3
1.2	Generating functions	5
1.3	Classical Eulerian numbers	6
1.4	Eulerian polynomials	9
1.5	Two important identities	10
1.6	Exponential generating function	12
	Problems	14
2	Narayana numbers	19
2.1	Catalan numbers	19
2.2	Pattern-avoiding permutations	20
2.3	Narayana numbers	23
2.4	Dyck paths	26
	2.4.1 Counting all Dyck paths	27
	2.4.2 Counting Dyck paths by peaks	29
	2.4.3 A bijection with 231-avoiding permutations	31
2.5	Planar binary trees	34
2.6	Noncrossing partitions	36
	Problems	40
3	Partially ordered sets	47
3.1	Basic definitions and terminology	47
3.2	Labeled posets and P -partitions	50
3.3	The shard intersection order	54
3.4	The lattice of noncrossing partitions	57
3.5	Absolute order and Noncrossing partitions	61
	Problems	64

4	Gamma-nonnegativity	71
4.1	The idea of gamma-nonnegativity	71
4.2	Gamma-nonnegativity for Eulerian numbers	72
4.3	Gamma-nonnegativity for Narayana numbers	76
4.4	Palindromicity, unimodality, and the gamma basis	77
4.5	Computing the gamma vector	80
4.6	Real roots and log-concavity	81
4.7	Symmetric boolean decomposition	84
	Problems	88
5	Weak order, hyperplane arrangements, and the Tamari lattice	95
5.1	Inversions	95
5.2	The weak order	98
5.3	The braid arrangement	100
5.4	Euclidean hyperplane arrangements	102
5.5	Products of faces and the weak order on chambers	105
5.6	Set compositions	108
5.7	The Tamari lattice	113
5.8	Rooted planar trees and faces of the associahedron	115
	Problems	123
6	Refined enumeration	127
6.1	The idea of a q -analogue	127
6.2	Lattice paths by area	129
6.3	Lattice paths by major index	132
6.4	Euler-Mahonian distributions	134
6.5	Descents and major index	137
6.6	q -Catalan numbers	139
6.7	q -Narayana numbers	140
6.8	Dyck paths by area	143
	Problems	149
7	Cubes, Carries, and an Amazing Matrix: (Supplemental) .	151
7.1	Slicing a cube	151
7.2	Carries in addition	154
7.3	The amazing matrix	156

Part II Combinatorial topology

8	Simplicial complexes	163
8.1	Abstract simplicial complexes	163
8.2	Simple convex polytopes	166
8.3	Boolean complexes	167
8.4	The order complex of a poset	169
8.5	Flag simplicial complexes	170

8.6	Balanced simplicial complexes	172
8.7	Face enumeration	173
8.8	The h -vector	175
8.9	The Dehn-Sommerville relations	177
	Problems	181
9	Barycentric subdivision	185
9.1	Barycentric subdivision of a finite cell complex	185
9.2	The barycentric subdivision of a simplex	187
9.3	Brenti and Welker's transformation	190
9.4	The h -vector of $\text{sd}(\Delta)$ and j -Eulerian numbers	193
9.5	Gamma-nonnegativity of $h(\text{sd}(\Delta))$	196
9.6	Real roots for barycentric subdivisions	200
	Problems	201
10	Characterizing f-vectors: (Supplemental)	203
10.1	Compressed simplicial complexes	203
10.2	Proof of the compression lemma	207
10.3	Kruskal-Katona-Schützenberger inequalities	215
10.4	Frankl-Füredi-Kalai inequalities	219
10.5	Multicomplexes and M -vectors	223
10.6	The Stanley-Reisner ring	225
10.7	The upper bound theorem and the g -theorem	228
10.8	Conjectures for flag spheres	230
 Part III Coxeter groups		
11	Coxeter groups	237
11.1	The symmetric group	237
11.2	Finite Coxeter groups: generators and relations	243
11.3	W -Mahonian distribution	246
11.4	W -Eulerian numbers	246
11.5	Finite reflection groups and root systems	250
	11.5.1 Type \mathbf{A}_{n-1}	254
	11.5.2 Type \mathbf{B}_n	254
	11.5.3 Type \mathbf{C}_n	255
	11.5.4 Type \mathbf{D}_n	255
	11.5.5 Roots for $I_2(m)$	256
11.6	The Coxeter arrangement and the Coxeter complex	257
11.7	Action of W and cosets of parabolic subgroups	259
11.8	Counting faces in the Coxeter complex	262
11.9	The W -Euler-Mahonian distribution	264
11.10	The weak order	266
11.11	The shard intersection order	269
	Problems	271

12	W-Narayana numbers	273
12.1	Reflection length and Coxeter elements	273
12.2	Absolute order and W -noncrossing partitions	276
12.3	W -Catalan and W -Narayana numbers	277
12.4	Coxeter-sortable elements	280
12.5	Root posets and W -nonnesting partitions	282
12.6	The W -associahedron	287
	Problems	290
13	Combinatorics for Coxeter groups of types	
	B_n and D_n: (Supplemental)	293
13.1	Type B_n Eulerian numbers	293
13.2	Type B_n gamma-nonnegativity	297
13.3	Type D_n Eulerian numbers	301
13.4	Type D_n gamma-nonnegativity	303
13.5	Combinatorial models for shard intersections	307
	13.5.1 Type A_{n-1}	307
	13.5.2 Type B_n	311
	13.5.3 Type D_n	316
13.6	Type B_n noncrossing partitions and Narayana numbers	320
13.7	Gamma-nonnegativity for $\text{Cat}(B_n; t)$	325
13.8	Type D_n noncrossing partitions and Narayana numbers	327
13.9	Gamma-nonnegativity for $\text{Cat}(D_n; t)$	330
14	Affine descents and the Steinberg torus: (Supplemental)	333
14.1	Affine Weyl groups	333
14.2	Faces of the affine Coxeter complex	334
14.3	The Steinberg torus	338
14.4	Affine Eulerian numbers	341
	14.4.1 Type A_{n-1}	341
	14.4.2 Type B_n	342
	14.4.3 Type C_n	343
	14.4.4 Type D_n	344
	References	347
	Hints and Solutions	359
	Index	453

Eulerian Numbers

Petersen, T.K.

2015, XVIII, 456 p. 78 illus., 4 illus. in color., Hardcover

ISBN: 978-1-4939-3090-6

A product of Birkhäuser Basel
