

# Table of Contents

## Foreword

## Introduction

The mathematical pendulum .....	xiii
Exercises .....	xvi

## Part I. Examples

### I. The harmonic oscillator

1. Hamilton's equations and $S^1$ symmetry .....	1
2. $S^1$ -energy momentum mapping .....	3
3. $U(2)$ -momentum mapping .....	7
4. The Hopf fibration .....	12
5. Invariant theory and reduction .....	20
6. Exercises .....	25

### II. Geodesics on $S^3$

1. The geodesic and Delaunay vector fields .....	31
2. The $SO(4)$ -momentum mapping .....	34
3. The Kepler problem .....	41
3.1 The Kepler vector field .....	41
3.2 The $so(4)$ -momentum map .....	43
3.3 Kepler's equation .....	48
4 Regularization of the Kepler vector field .....	51
4.1 Moser's regularization .....	51
4.2 Ligon-Schaaf regularization .....	56
5. Exercises .....	66

### III. The Euler top

1. Facts about $\mathrm{SO}(3)$ .....	79
1.1 The standard model .....	79
1.2 The exponential map .....	82
1.3 The solid ball model .....	83
1.4 The sphere bundle model .....	85
2. Left invariant geodesics .....	93
2.1 Euler-Arnol'd equations on $\mathrm{SO}(3) \times \mathbf{R}^3$ .....	93
2.2 Euler-Arnol'd equations on $T_1S^2 \times \mathbf{R}^3$ .....	96
3. Symmetry and reduction .....	99
3.1 $\mathrm{SO}(3)$ symmetry .....	99
3.2 Construction of the reduced phase space .....	101
3.3 Geometry of the reduction map .....	103
3.4 Euler's equations .....	104
4. Qualitative behavior of the reduced system .....	106
5. Analysis of the energy momentum map .....	109
6. Integration of the Euler-Arnol'd equations .....	114
7. The rotation number .....	118
7.1 An analytic formula .....	118
7.2 Poincaré's construction .....	119
8. A twisting phenomenon .....	127
9. Exercises .....	130

### IV. The spherical pendulum

1. Liouville integrability .....	139
2. Reduction of the $S^1$ symmetry .....	142
2.1 The orbit space $T\mathbf{R}^3/S^1$ .....	142
2.2 The singular reduced space .....	144
2.3 Differential structure on $P_j$ .....	146
2.4 Poisson brackets on $C^\infty(P_j)$ .....	148
2.5 Dynamics on the reduced space $P_j$ .....	150
3. The energy momentum mapping .....	150
3.1 Critical points of $\mathcal{E}\mathcal{M}$ .....	151
3.2 Critical values of $\mathcal{E}\mathcal{M}$ .....	153
3.3 Level sets of the reduced Hamiltonian $H_j _{P_j}$ .....	156
3.4 Level sets of the energy momentum mapping $\mathcal{E}\mathcal{M}$ .....	157
4. Rotation number and first return time .....	167
4.1 Definition of first return time and rotation number .....	167
4.2 Analytic properties of the rotation number .....	171
4.3 Analytic properties of the first return time .....	175
5. Monodromy .....	176
5.1 Definition of monodromy .....	176
5.2 Monodromy of the bundle of period lattices .....	177
6. Exercises .....	182

## V. The Lagrange top

1. The basic model .....	193
2. Liouville integrability .....	194
3. Reduction of the right $S^1$ -action .....	197
3.1 Reduction to the Euler-Poisson equations .....	197
3.2 The magnetic spherical pendulum .....	202
4. Reduction of the left $S^1$ -action .....	205
4.1 Induced action on $P^a$ .....	205
4.2 The orbit space $(J_\ell^a)^{-1}(b)/S^1$ .....	207
4.3 Some differential spaces .....	211
4.4 Poisson structure on $\tilde{C}^\infty(P_b^a)$ .....	215
5. The Euler-Poisson equations .....	224
5.1 The twice reduced system .....	224
5.2 The energy momentum mapping .....	231
5.3 Motion of the tip of the figure axis .....	235
6. The energy momentum mapping .....	248
6.1 Topology of $\mathcal{E}\mathcal{M}^{-1}(h, a, b)$ and $H^{-1}(h)$ .....	248
6.2 The discriminant locus .....	255
6.3 The period lattice .....	262
6.4 Monodromy .....	266
7. The Hamiltonian Hopf bifurcation .....	268
7.1 The linear Hamiltonian Hopf bifurcation .....	268
7.2 The nonlinear Hamiltonian Hopf bifurcation .....	273
8. Exercises .....	278

## Part II. Theory

### VI. Fundamental concepts

1. Symplectic linear algebra .....	281
2. Symplectic manifolds .....	285
3. Hamilton's equations .....	290
4. Poisson algebras and manifolds .....	294
5. Exercises .....	304

## VII. Systems with symmetry

1. Smooth group actions .....	305
2. Orbit spaces .....	310
2.1 Orbit space of a proper action .....	310
2.2 Orbit space of a proper free action .....	312
3. Differential spaces .....	318
3.1 Differential structure .....	318
3.2 An orbit space as a differential space .....	321
3.3 Subcartesian spaces .....	323
3.4 Stratification of an orbit space by orbit types .....	327
3.5 Minimality of $\mathcal{S}$ .....	329
4. Vector fields on a differential space .....	330
4.1 Definition of a vector field .....	330
4.2 Vector field on a stratified differential space .....	332
4.3 Vector fields on an orbit space .....	333
5. Momentum mappings .....	335
5.1 General properties .....	335
5.2 Normal form .....	341
6. Regular reduction .....	346
6.1 The standard approach .....	346
6.2 An alternative approach .....	349
7. Singular reduction .....	351
7.1 Singular reduced space and dynamics .....	351
7.2 Stratification of the singular reduced space .....	359
8. Exercises .....	366

## VIII. Ehresmann connections

1. Basic properties .....	373
2. The Ehresmann theorems .....	378
3. Exercises .....	380

## IX. Action angle coordinates

1. Liouville integrable systems .....	385
2. Local action angle coordinates .....	385
3. Exercises .....	390

## X. Monodromy

1. The period lattice bundle .....	391
2. The geometric monodromy theorem .....	393
2.1 The singular fiber .....	394
2.2 Nearby singular fibers .....	398

2.3 Monodromy .....	399
3. The hyperbolic circular billiard .....	402
3.1 The basic model .....	402
3.2 Reduction of the $S^1$ symmetry .....	404
3.3 Partial reconstruction .....	405
3.4 Full reconstruction .....	406
3.5 The first return time and rotation angle .....	407
3.6 The action functions .....	409
4. Exercises .....	410

## **XI. Basic Morse theory**

1. Preliminaries .....	423
2. The Morse lemma .....	426
3. The Morse isotopy lemma .....	429
4. Exercise .....	430

## **Notes**

Forword and Introduction .....	431
Harmonic oscillator .....	431
Geodesics on $S^3$ .....	432
Euler top .....	433
Spherical pendulum .....	435
Lagrange top .....	436
Fundamental concepts .....	438
Systems with symmetry .....	439
Ehresmann connections .....	441
Action angle coordinates .....	442
Monodromy .....	442
Morse theory .....	444
