

Contents

1	Theoretical Background	1
1.1	Introduction	1
1.2	Induction Heating	2
1.3	Direct Resistance Heating	2
1.4	Basic Electromagnetic Phenomena	3
1.4.1	Maxwell Equations	3
1.4.2	Theorem and Poynting's Vector	5
1.4.3	Phenomena Affecting the Current Density Distribution in Conductors	8
	References.	22
2	Electromagnetic Field in Workpieces with Flat Surfaces	23
2.1	Semi-infinite Body of Homogeneous Material	23
2.1.1	Induction Heating	23
2.1.2	Resistance Heating	36
2.2	Semi-infinite Body of Ferromagnetic Material	40
2.3	Infinite Metal Slab of Homogeneous Material.	51
2.3.1	Induction Heating by a Flat Inductor on One Side of the Workpiece	51
2.3.2	Metal Slab in Longitudinal Flux Inductor (Exciting Magnetic Field on Both Sides of the Workpiece).	58
2.3.3	Direct Resistance Heating	65
2.4	Slab of Rectangular Cross-Section	71
2.4.1	Induction Heating	71
2.4.2	Energy in Slabs of Rectangular Cross-Section	76
2.4.3	Direct Resistance Heating	80
2.5	Slab of Magnetic Material	82
2.5.1	Induction Heating	82
2.5.2	Resistance Heating	83
	References.	83

3	Electromagnetic Field in Cylindrical Bodies	85
3.1	Solid Cylindrical Workpieces of Homogeneous Material	85
3.1.1	Induction Heating of Cylindrical Workpieces	86
3.1.2	Direct Resistance Heating	93
3.2	Solid Cylindrical Workpieces of Ferromagnetic Material	100
3.2.1	Direct Resistance Heating	100
3.2.2	Induction Heating Solid Ferromagnetic Cylinder	105
3.3	Hollow Cylindrical Workpieces of Homogeneous Material.	107
3.3.1	Induction Heating with Internal and External Exciting Magnetic Field.	107
3.3.2	Induction Heating with External Exciting Magnetic Field	109
3.3.3	Induction Heating of Hollow Cylindrical Workpieces with Internal Inductors.	114
3.3.4	Resistance Heating of Cylindrical Hollow Workpieces	117
3.4	Hollow Cylindrical Workpieces of Ferromagnetic Material.	120
3.4.1	Induction Heating	120
3.4.2	Resistance Heating	122
	References.	124
4	Special Problems in Induction and Resistance Heating	127
4.1	Resistance Heating of Ferromagnetic Workpieces of Rectangular Cross-section	127
4.1.1	Influence of Power Supply Circuit on Heating Transient	134
4.2	Curved Conductors with Cylindrical Cross-Section	140
4.2.1	Electromagnetic Processes in Toroidal Conductors of Circular Cross-section	140
4.2.2	Resistance Heating of Curved Cylindrical Work-Pieces.	149
4.2.3	Equalization of Temperature Distribution in the Cross-section of Bent Conductors	153
4.3	Transverse Flux Induction Heating	164
4.3.1	Preliminary Choice of Design Parameters.	172
4.3.2	Final TFH System Characteristics	177
4.3.3	Calculations of Heating Transients	179
4.3.4	Other Inductor Geometries	182
4.3.5	Recent Developments and Conclusions	186
4.4	Planar Circular Coils for Induction Heating	191
4.4.1	Analytical Solutions	191
4.4.2	Examples of Results Obtained with the Analytical Solution.	196
4.4.3	Examples of Numerical Results	197

4.5	Induction Heating of “Long” Cylindrical Workpieces with Inductors of Finite Axial Length	200
4.6	Pulse Induction Hardening of Complex Workpieces	214
4.6.1	Introduction	214
4.6.2	Single-Frequency Processes	215
4.6.3	Dual-Frequency Processes	220
4.6.4	Gear Spin Hardening: Main Factors Influencing the Process.	227
4.6.5	Numerical Simulations and Results	230
4.6.6	Conclusions	241
4.7	Induction Heating of Cylindrical Billets Rotating in DC Magnetic Field	242
4.7.1	Introduction	242
4.7.2	Electromagnetic Solution for the Infinitely Long Geometry.	244
4.7.3	Heating Parameters	248
4.7.4	Edge Effect in Finite Length Billet	250
4.7.5	Influence of Shape and Position of Superconducting Coils	250
4.7.6	Optimisation of the Heating Process	256
4.8	Induction Heating with Permanent Magnets	258
4.8.1	Introduction	258
4.8.2	FEM Solution.	260
4.8.3	Analytical Solution	261
4.8.4	Calculation, Experimental Results and Design Optimization	266
4.9	Inductors for Induction Heating of Internal Cylindrical Surfaces.	268
4.9.1	Inductor Equivalent Resistance	269
4.9.2	Results of Numerical Analysis	270
4.9.3	Conclusions	275
4.10	Electromagnetic Forces	275
4.10.1	Introduction	275
4.10.2	Evaluation by Lorentz’s Law of Forces in “Long” Cylindrical Systems	276
4.10.3	Forces in the Induction Heating of Disk Plates with Planar Circular Coils	284
4.10.4	Evaluation of Forces by Variation of the Field Energy.	289
4.10.5	Forces in Induction Heating of the Ends of Non-magnetic Bars	290
4.10.6	Forces in Induction Heating of the Ends of Magnetic Bars	293
4.10.7	Conclusions	294
	References.	294
