
Table of Contents

- 1 Core Task of Vehicle Transmissions 1**
 - 1.1 Traction Demand and Torque Supply at Constant Speed 2
 - 1.1.1 Traction Demand at Constant Speed 2
 - 1.1.2 Torque Supply at Constant Velocity 4
 - 1.2 Traction Demand and Torque Supply for Transient Driving States 5
 - 1.2.1 Traction Demand for Vehicle Acceleration 6
 - 1.2.2 Torque Supply for Vehicle Acceleration 8
 - 1.2.3 Fuel Economy Map of a Combustion Engine 8
 - 1.2.4 Possibilities of Power Supply 9
 - 1.2.5 Traction Force Diagram 10
 - 1.2.6 Response Characteristics 11
 - 1.2.7 Electric Motors for Hybrid and Electric Propulsion 13
 - 1.3 Fuel Economy Optimization 15
 - 1.3.1 Fuel Consumption Investigation 16
 - 1.3.2 Shifting Operational Points 18
 - 1.3.3 Optimization of the Internal Combustion Engine 21
 - 1.3.4 Potential of Combined Shifting Operational Points
and Optimization of the ICE 23
 - 1.3.5 Efficiency 24
 - 1.3.6 Trade-Off between Fuel Consumption and Driving Pleasure 27
 - 1.4 Launch and Synchronizing Speeds 31
 - 1.4.1 Clutches 32
 - 1.4.2 Vehicle Launch 35
 - 1.5 Gear Ratios and their Design 39
 - 1.5.1 Gear Ratio 38
 - 1.5.2 Requirements Imposed on Gear Ratio Design 40
 - 1.5.3 Design Options for the Gear Ratio to Achieve Top Speed 41
 - 1.5.4 Design of the Smallest Transmission Ratio as Overdrive 42
 - 1.5.5 Design of the Largest Transmission Ratio 43
 - 1.5.6 Design of the Number and Staging of the Gears 43

1.5.7	Trade-Offs in Gear Ratio Selection	46
1.5.8	Practical Design Comments	47
2	Shift Dynamics and Shift Comfort	49
2.1	Fundamentals of Gear Ratio Change and Synchronization	49
2.1.1	Classification of Shift Sequences	49
2.1.2	Power Upshift as Powershift without Engine Torque Control	51
2.1.3	Power Upshift as Powershift with Engine Torque Control	54
2.1.4	Sensitivities for Power Upshifts as Powershifts	55
2.1.5	Power Downshift as Powershift	59
2.1.6	Power Upshift with Traction Force Interruption	60
2.1.7	Power Downshift with Traction Force Interruption	63
2.1.8	Operational Points During Shifts in the Engine Map	65
2.2	Power Train Dynamics	66
2.2.1	Power Train Model	68
2.2.2	Reduction of Inertia	71
2.2.3	Reduction of Spring Stiffness	72
2.2.4	Substitute System	73
2.2.5	Eigen Frequencies and Eigen Modes	75
2.2.6	Excitations	80
2.2.7	Forced Oscillation	83
2.2.8	Rotational Vibration Damping on the Transmission Input	85
2.3	Vehicle Acoustics	88
2.3.1	Transmission Caused Noise, Vibration, Harshness (NVH)	88
2.3.2	Transmission in Conjunction with the Acoustic Driving Impression	92
2.4	Vehicle Dynamics and Driver Interaction	94
2.4.1	Vehicle Dynamics	95
2.4.2	Dynamic Coupling	95
2.4.3	Influence of Shifting	96
2.4.4	Physiological Perceptions of the Human Being	97
3	Power Transfer Elements	99
3.1	Fundamentals and Active Principles	99
3.1.1	Forms and Arrangements for Power Transfer	99
3.1.2	Shifting and Modulating the Power Transfer	102
3.1.3	Clutch Functionalities—Principles of Torque Transfer Through Friction	103
3.2	Simple Gear Stages	104
3.2.1	Design Criteria for Gear Stages	106
3.2.2	The Main Parameters of a Gear Set	107

3.2.3	Tooth Flank Modifications	108
3.2.4	Practical Design Guidelines for Spur Gear Pairs	110
3.2.5	Noise Optimization and Load Capacity Optimization of Meshing Gears	112
3.2.6	Bevel Gear Pairs	112
3.3	Planetary Gear Stages	114
3.3.1	Structure and Kinematics of the Simple Planetary Gear Stage	114
3.3.2	Graphical Determination of Transmission Ratios	116
3.3.3	Forces, Torques, Losses	120
3.3.4	Design Guidelines	120
3.3.5	Production	121
3.3.6	Complex Planetary Gear Sets	122
3.3.7	Power Split	123
3.3.8	Differentials	124
3.4	Sliding Gears and Dog Clutches	126
3.4.1	Active Principle and Areas of Implementation	126
3.4.2	Design Principles	127
3.4.3	Examples of Actual Designs	129
3.5	Dry Clutches	131
3.5.1	Design Characteristics of a Dry Clutch	133
3.6	Wet Clutches	135
3.6.1	Fundamentals of Torque Transfer with Mixed Friction	135
3.6.2	Heat Balance of Wet Clutches	136
3.6.3	Friction Lining Wear	139
3.6.4	Oil Load and Friction Lining Load	140
3.6.5	Drag Torque	141
3.7	Synchronizer Units	141
3.7.1	Abstraction and Motivation	141
3.7.2	Structure and Function of a Synchronizer Unit	142
3.7.3	Synchronization Systems	147
3.7.4	Design and Optimization Guidelines	147
3.8	Fluid-Dynamic Converter and Lock-Up Clutch	148
3.8.1	Function and Curves of Fluid-Dynamic Converters	148
3.8.2	Design Guidelines Torque Converters	152
3.8.3	Function and Principles of the Lock-Up Clutch	152
3.9	Continuously Variable Power Transfer	155
3.9.1	Active Principle	155
3.9.2	Push-Belt and Chain Variators	157
3.9.3	Traction Drive Variator, Friction Wheel Variator	160
3.9.4	Variator of the Cone Ring Transmission	161
3.9.5	Lubrication and Clamping	162

4	Actuation, Servo, and Auxiliary Systems	163
4.1	Fundamentals and Active Principles	163
4.1.1	Reducing Force Requirements	165
4.2	Transfer Elements	167
4.2.1	Force Transfer from Stationary to Rotating Elements	167
4.2.2	Apply and Release Systems	168
4.2.3	Inner Shift System	168
4.3	Cooling and Lubrication	170
4.4	Requirements for Servo and Actuation Systems	171
4.5	Hydraulic Actuation	172
4.5.1	Pumps	172
4.5.2	Valves for Control and Regulation	177
4.5.3	Further Components	178
4.5.4	Control Subsystems	180
4.5.5	Electrohydraulic Actuation Systems	183
4.6	Pneumatic Actuation	184
4.6.1	Properties of Air as a Medium	184
4.6.2	Pneumatic Components	184
4.6.3	Example of Pneumatic Clutch Control	185
4.7	Electromechanical Actuation	186
4.7.1	Energy Converters	187
4.7.2	Power Transfer	190
4.7.3	Actuator Designs	191
4.8	Energy and Power Balance	194
5	Controls	197
5.1	Electronic Control Units	197
5.1.1	Overview	197
5.1.2	Interfaces	199
5.1.3	Micro-controller	201
5.1.4	Monitoring Device	201
5.1.5	Current Control	201
5.1.6	Electro-magnetic Compatibility	201
5.1.7	Control Unit Designs	202
5.2	Software Architecture	203
5.2.1	Architecture	204
5.3	Signal Processing	206
5.3.1	Speed Sensors	206
5.3.2	Shift Fork Position Sensors	207
5.3.3	Pressure Sensors	207
5.3.4	Temperature Sensors	208
5.3.5	Shifter Position Sensors	208

5.3.6	Signal Processing and Filtering	208
5.3.7	Failure Detection	210
5.3.8	Onboard Diagnostics	211
5.3.9	Actuators	212
5.4	Selecting the Shift Point	213
5.4.1	Shift Strategy	213
5.5	Shift Execution	217
5.5.1	Controls	218
5.5.2	Adaptation	220
5.6	Safety in Transmission Systems	222
5.7	Calculating Torque Over Pressure	224
6	Transmission Designs for Passenger Cars	229
6.1	Transmission Type Independent Attributes, Elements and Objectives ...	230
6.1.1	Power Train Arrangements	230
6.1.2	Transmission Development	231
6.1.3	Components in Transmission Design	234
6.1.4	Housing Development	239
6.1.5	Determination of Transmission Loads	241
6.1.6	Tolerance Analysis	243
6.1.7	Transmission Application and Calibration	243
6.2	Manual Transmissions	244
6.2.1	Layout and Subassemblies	245
6.2.2	Requirements for Manual Transmissions	246
6.2.3	Design of Manual Transmissions	247
6.2.4	Manual Transmission Examples	248
6.3	Automated Manual Transmissions	249
6.3.1	Layout and Sub-assemblies	250
6.3.2	Requirements for Automated Manual Transmissions	251
6.3.3	Design of Automated Manual Transmissions	252
6.3.4	Automated Manual Transmission Example	253
6.4	Dual Clutch Transmissions	255
6.4.1	Layout and Sub-assemblies	255
6.4.2	Requirements for Dual Clutch Transmissions	257
6.4.3	Design of Dual Clutch Transmissions	258
6.4.4	Dual Clutch Transmission Examples	259
6.5	Automatic Transmissions	262
6.5.1	Layout and Subassemblies of Automatic Transmissions	263
6.5.2	Requirements for Automatic Transmissions	264
6.5.3	Design of Automatic Transmissions	266
6.5.4	Automatic Transmission Examples	268

6.6	Continuously Variable Transmissions (CVTs)	269
6.6.1	Layout and Sub-assemblies of CVTs	270
6.6.2	Requirements for CVTs	272
6.6.3	Design of CVTs	272
6.6.4	CVT Example	272
7	Power Train Electrification	275
7.1	Motivation and Objectives	276
7.1.1	Requirements for Electric and Hybrid Power Trains	277
7.2	Components and Configurations	279
7.2.1	Main Components for Electrification	279
7.2.2	Storage Systems for Electric Energy	282
7.2.3	Further Sub-Systems and Interaction with the Entire Vehicle	284
7.2.4	Series Hybrid	285
7.2.5	Parallel Hybrid	287
7.2.6	Power-Split Hybrid	288
7.2.7	Combinations of Hybrid Configurations	288
7.3	Functions and Strategies for Hybrid Power Trains	289
7.3.1	Start–Stop Function	289
7.3.2	Recuperation	290
7.3.3	Boost	290
7.3.4	Electric Driving	291
7.3.5	Shifting Operational Points	291
7.3.6	Operation Strategies	292
7.3.7	Degree of Electrification and Fuel Economy	294
7.4	Examples of Hybrid and Electric Power Trains	297
7.4.1	Micro Hybrids (Start–Stop Systems)	297
7.4.2	Power-Split Hybrids	298
7.4.3	Parallel Hybrid Examples	299
7.4.4	Combining Power-Split and Parallel Hybrid Architectures	300
7.4.5	Parallel Hybrid Based on DCT	301
7.4.6	Combining Parallel and Series Hybrid	303
7.4.7	Electric Propulsion Enhanced by Series and Power-Split Modes ...	304
7.4.8	Transmissions for Electric Vehicles (EV)	306
7.4.9	Range Extender	306
8	Transmission Applications Beyond the Passenger Car Sector	309
8.1	General Requirements Imposed on Transmissions Beyond the Passenger Vehicle Sector	309
8.2	Truck Transmission	313
8.2.1	Requirements Imposed on Commercial Truck Transmissions ...	314
8.2.2	Continuous Braking Devices	316

8.2.3	Design Guidelines for Commercial Truck Transmissions	318
8.2.4	Design Examples of Commercial Truck Transmissions	320
8.3	Bus Transmissions	324
8.3.1	Requirements Imposed on Bus Transmissions	324
8.3.2	Design Examples of Bus Transmissions	325
8.4	Tractor Transmissions	328
8.4.1	Requirements Imposed on Tractor Transmissions	329
8.4.2	Transmission as Part of the Chassis	330
8.4.3	Design Examples of Tractor Transmissions	331
8.5	Motorcycle Transmissions	334
8.5.1	Requirements Imposed on Motorcycle Transmissions	334
8.5.2	Design Examples with Foot Actuation	335
8.5.3	Examples of Automated Motorcycle Transmissions	337
8.6	Racing Transmissions	338
8.6.1	Racing Requirements	339
8.6.2	Materials Used in Formula 1	340
8.6.3	Design Example of a Formula 1 Transmission	340
