<b>1</b>	<b>Hydrogen Migration in Intense Laser Fields: Analysis and Control in Concert.</b>	<b>1</b>
	Nicola Reusch, Nora Schirmel and Karl-Michael Weitzel	
1.1	Introduction	1
1.2	Experimental Approach	3
1.3	Results	8
1.3.1	Control by Linear Chirp	8
1.3.2	Control by Quadratic Chirp	11
1.3.3	Control by Other Means of Systematic Pulse Shaping	14
1.3.4	Control by Genetic Algorithm	15
1.4	Summary and Conclusions	20
	References	20
<b>2</b>	<b>Electron and Ion Coincidence Momentum Imaging of Multichannel Dissociative Ionization of Ethanol in Intense Laser Fields</b>	<b>23</b>
	Ryuji Itakura, Kouichi Hosaka, Atsushi Yokoyama, Tomoya Ikuta, Fumihiko Kannari and Kaoru Yamanouchi	
2.1	Introduction	23
2.2	Photoelectron-Photoion Coincidence Momentum Imaging	25
2.3	Channel-Specific Photoelectron Spectra	28
2.3.1	Electronic Energy Levels of $\text{C}_2\text{H}_5\text{OH}^+$ and Appearance Energies of Product Ions	28
2.3.2	Near-Infrared Laser Fields	28
2.3.3	Ultraviolet Laser Fields	32
2.4	Correlation Between a Photoelectron and a Fragment Ion	36
2.4.1	Energy Correlation Mapping	36
2.4.2	Translational Temperature of Fragment Ions	37
2.5	Summary	39
	References	40

<b>3</b>	<b>Exploring and Controlling Fragmentation of Polyatomic Molecules with Few-Cycle Laser Pulses . . . . .</b>	<b>43</b>
	Markus Kitzler, Xinhua Xie and Andrius Baltuška	
3.1	Introduction . . . . .	44
3.2	Controlling Fragmentation Reactions with the Shape of Intense Few-Cycle Laser Pulses . . . . .	45
3.2.1	Experiment . . . . .	46
3.2.2	Dependence of Fragmentation Yield on CEP . . . . .	49
3.2.3	Discussion of the Underlying Control Mechanism . . . . .	49
3.2.4	Recollision Ionization from Lower-Valence Orbitals . . . . .	51
3.2.5	Experimental Test of the Recollision Ionization Mechanism . . . . .	51
3.2.6	Discussion and Outlook . . . . .	52
3.3	Controlling Fragmentation Reactions by Selective Ionization Into Dissociative Excited States . . . . .	53
3.3.1	Experiment . . . . .	54
3.3.2	Ionization Into Binding States . . . . .	54
3.3.3	Controlling Dissociation from the Cation . . . . .	56
3.3.4	Controlling Fragmentation Reactions from the Dication . . . . .	56
3.3.5	Selecting the Fragmentation Pathway . . . . .	58
3.3.6	Discussion and Outlook . . . . .	61
3.4	Exploring Many-Electron Ionization Dynamics in Polyatomic Molecules . . . . .	61
3.4.1	Experiment . . . . .	62
3.4.2	Proton Spectra: Dependence on Pulse Duration and Intensity . . . . .	63
3.4.3	Charge State Selected Proton Spectra and Reconstruction of the C–H Distance . . . . .	65
3.4.4	Dependence of Charge State on Pulse Duration . . . . .	67
3.4.5	Discussion and Outlook . . . . .	67
3.5	Summary . . . . .	68
	References . . . . .	69
<b>4</b>	<b>Optimal Pulse Shaping for Ultrafast Laser Interaction with Quantum Systems . . . . .</b>	<b>73</b>
	Hyosub Kim, Hangyeol Lee, Jongseok Lim and Jaewook Ahn	
4.1	Introduction . . . . .	73
4.2	Types of Pulse Shaping . . . . .	74
4.3	Pulse Shaping Devices . . . . .	76
4.3.1	Spatial Light Modulator . . . . .	77
4.3.2	Acousto-Optic Programmable Dispersive Filter . . . . .	78
4.4	Spectral Amplitude Blocking . . . . .	78

4.4.1	A Ladder-Type System . . . . .	78
4.4.2	Spectral Amplitude Blocking in a V-Type System . . .	80
4.5	Spectral Chirp Control . . . . .	82
4.5.1	Chirps in a 2 + 1 Photon Transition . . . . .	82
4.5.2	Chirps in Two-Photon Transitions . . . . .	84
4.5.3	Optimal Pulse Shaping of a Two-Photon Transition . . . . .	86
4.5.4	Chirps in a V-Type System . . . . .	88
4.6	Spectral Phase Programming . . . . .	89
4.6.1	Spectral Phase Programming for a V-Type Transition . . . . .	89
4.6.2	Spectral Phase Programming for a Non-resonant Two-Photon Transition . . . . .	91
4.7	Conclusion. . . . .	92
	References . . . . .	93
<b>5</b>	<b>Photo-Electron Momentum Spectra in Strong Laser-Matter Interactions . . . . .</b>	<b>95</b>
	Armin Scrinzi	
5.1	Introduction . . . . .	95
5.1.1	Size of the Computational Problem: The Infrared Curse . . . . .	97
5.2	The t-SURFF Method . . . . .	98
5.2.1	Single-Electron Systems . . . . .	98
5.2.2	Single-Ionization into Multiple Ionic Channels. . . . .	101
5.2.3	Double Ionization Spectra . . . . .	104
5.2.4	Computational Remarks . . . . .	107
5.3	Applications. . . . .	107
5.3.1	Spectra for a Short Range Potential . . . . .	107
5.3.2	Spectra for the Hydrogen Atom . . . . .	109
5.3.3	IR Photo-Electron Spectra at Elliptical Polarization. . .	110
5.3.4	Two-Electron System: 2×1-Dimensional Helium . . .	110
5.3.5	XUV Photo-Emission from He in Full Dimensionality . . . . .	113
5.4	Conclusions and Outlook. . . . .	114
	References . . . . .	115
<b>6</b>	<b>Laser Induced Electron Diffraction, LIED, in Circular Polarization Molecular Attosecond Photoionization, MAP . . . . .</b>	<b>119</b>
	Kai-Jun Yuan and André D. Bandrauk	
6.1	Introduction . . . . .	119
6.2	Numerical Methods. . . . .	121

6.3	Diffraction in $H_2$ and $H_2^+$ . . . . .	124
6.3.1	MAPDs in $H_2$ and $H_2^+$ by XUV Pulses . . . . .	125
