

Contents

1	Introduction	1
1.1	Bose–Einstein Condensation	1
1.2	The Many-Body Physics of Tunneling	2
1.3	Theoretical Description of Quantum Many-Body Systems	3
1.4	Structure of this Thesis	5
	References	6
2	Theoretical Concepts and Numerical Methods	9
2.1	The Schrödinger Equation from a Many-Body Perspective	9
2.1.1	Second Quantization	10
2.1.2	Quantities of Interest	15
2.2	Theoretical Methods Employing the Full Many-Boson Hamiltonian	18
2.2.1	The Time-Dependent Variational Principle	18
2.2.2	The Time-Dependent Gross–Pitaevskii Equation	19
2.2.3	Best Mean-Field	20
2.2.4	The Multiconfigurational Time-Dependent Hartree Method for Bosons	22
2.3	Theoretical Methods Employing Model Hamiltonians	24
2.3.1	Bose–Hubbard and Time-Evolved Block Decimation	24
2.3.2	The Discrete Non-Linear Schrödinger Equation	25
2.4	Numerical Methods	26
2.4.1	The Multiconfigurational Time-Dependent Hartree for Bosons Software Package	26
	References	32
3	Benchmarks with Analytically Solvable Problems	35
3.1	The Harmonic Interaction Model	36
3.2	Benchmark Studies with the Harmonic Interaction Model	37
3.2.1	One-Dimensional HIM	39
3.2.2	Two-Dimensional HIM	45
3.3	Dynamics of an Interaction Quench in the Harmonic Interaction Model	48

3.4	Comment on the Effects of the Separability of the Harmonic Interaction Model	50
3.5	Discussion and Summary of the Benchmark with the Harmonic Interaction Model.	51
	References	53
4	A Case Study with an Attractive BEC: Comparison of Lattice Model, Gross–Pitaevskii, and MCTDHB Predictions on a Tunneling Process.	55
4.1	Mapping of Discrete and Continuous Space Problems	56
4.2	Comparison of DNLS, BH, TDGP and MCTDHB Dynamics	58
	References	61
5	Theoretical Considerations and Analytical Models on the Many-Body Physics of Tunneling Bosons	63
5.1	Analytical Considerations Within the Gross–Pitaevskii Approximation	63
5.2	Analytical Considerations Beyond Gross–Pitaevskii.	66
5.2.1	Decomposition of Hilbert Space into Subspaces	66
5.2.2	Model for the Energetics of the Many-Body Physics of Tunneling to Open Space.	69
5.2.3	Model with Two Momenta from Single-Particle States	71
	References	73
6	Tunneling of a Many-Boson System to Open Space Without a Threshold	75
6.1	One-Body Density and Integrals on It	77
6.2	Momentum Distributions	78
6.3	Coherence from Natural Occupations and Correlation Functions.	81
6.4	Tunneling Without a Threshold and Stronger Interactions	83
6.5	Direct Detection of the Momentum Spectra	84
6.6	Connection of the Numerical Experiment to Prior Model Considerations.	86
	References	87
7	Tunneling of a Many-Boson System to Open Space with a Threshold	89
7.1	Setup	90
7.2	Threshold Potentials and Their Dynamics from the Point of View of Energetics	92
7.3	Controlling the Dynamics of Two Bosons by the Threshold	93

7.4	Controlling the Dynamics of Three Bosons by the Interactions	100
7.4.1	Nonescape Probabilities	102
7.4.2	Coherence and Correlations in the Tunneling Process with a Threshold for $N = 3$	103
7.5	Validation of the Control Scheme for Stronger Interactions and Larger Particle Numbers.	105
	References	107
8	Final Remarks and Outlook	109
8.1	Final Remarks.	109
8.2	Outlook	111
	References	112
	Appendix A: Particle Loss Operators	113
	Appendix B: The Concept of Local Fragmentation	117
	Appendix C: Reduced One-Body Density Matrix and Momentum Distribution of a Gross–Pitaevskii Wave Function Composed of Two Plane Waves.	121
	Appendix D: Derivation of the Reduced One-body Density for a System Tunneling with Two Momenta	125
	Appendix E: Derivation of the Diagonal of the Reduced Two-body Density for a System Tunneling with Two Momenta	127
	Appendix F: Derivation of the Diagonal of the Second Order Correlation Function for a System Tunneling with Two Momenta.	129
	Appendix G: Densities of a Model with Delocalized Orbitals and Two Momenta	131
	Appendix H: Author’s Works and Awards	135
