1	Introduction to Radio Systems	1
1.1	Overview of Wireless Communication Systems.....	1
1.2	Simplified Block Diagram of Transmitter and Receiver.....	3
1.3	Basic Modulation Definitions in Mathematical Terms	5
1.3.1	Amplitude Modulation (AM)	5
1.3.2	Frequency Modulation (FM).....	5
1.3.3	Phase Modulation (PM)	6
1.4	Spectral Properties of the Basic Modulation Schemes	6
1.4.1	Amplitude Modulation Spectrum.....	6
1.4.2	Frequency Modulation Spectrum.....	8
1.4.3	Differences Between AM and FM	10
1.4.4	Vector Representations.....	11
1.4.4.1	AM Vector Representation	12
1.4.4.2	FM Vector Representation.....	14
1.4.4.2.1	Narrowband FM.....	14
1.4.4.2.2	Wideband FM.....	16
1.4.5	Phase Modulation Spectrum.....	17
1.5	Summary	19
	References	19
2	Modulation and Detection.....	21
2.1	AM Modulators	21
2.1.1	Methods to Create Single Sideband (SSB) AM Signals	23
2.2	AM Demodulators	24
2.2.1	Envelope Detector	24
2.2.2	Product Detector.....	25
2.3	FM Modulators.....	25
2.3.1	Direct FM Modulator	25
2.3.2	Indirect FM Modulator.....	26
2.3.3	PM Modulator	26
2.4	FM Demodulators	27
2.4.1	FM Balanced Demodulator	28
2.4.2	FM Quadrature (Detector) Demodulator.....	30

2.4.3	Phase-Locked Loop (PLL)-Based FM Demodulator	31
2.4.4	Zero-Crossing Detector FM Demodulator	32
2.5	PM Demodulators	34
2.6	Digital Modulation	34
2.6.1	Binary Modulation—Amplitude-Shift Keying (ASK).....	36
2.6.2	Binary Modulation—Frequency-Shift Keying (FSK).....	37
2.6.3	Binary Modulation—Phase-Shift Keying (PSK).....	37
2.7	Complex Envelope Form of Modulation Signals.....	39
2.7.1	M-ary Modulation—MPSK	40
2.7.2	Binary Phase Shift Keying Modulation—BPSK	41
2.7.2.1	Binary Phase Shift Keying Detection	43
2.7.3	Differential Binary Phase Shift Keying—DBPSK.....	44
2.7.3.1	DPSK Modulator.....	44
2.7.3.2	DPSK Demodulator	45
2.7.4	Quadrature Phase Shift Keying Modulation—QPSK	45
2.7.4.1	Quadrature Phase Shift Keying Modulator.....	47
2.7.4.2	Quadrature Phase Shift Keying Demodulator.....	48
2.7.5	$\pi/4$ QPSK—Shifted Quadrature Phase-Shift Keying Modulation	48
2.7.5.1	$\pi/4$ QPSK—Shifted Quadrature Phase-Shift Keying Modulator	49
2.7.5.2	$\pi/4$ QPSK—Shifted Quadrature Phase-Shift Keying Demodulator	49
2.7.5.3	$\pi/4$ Shifted QPSK—Demodulator with IF Differential Detector	50
2.7.5.4	$\pi/4$ QPSK Demodulator: FM Discriminator.....	50
2.7.6	Binary Frequency-Shift Keying—BFSK	51
2.7.6.1	BFSK Modulator.....	52
2.7.6.2	BFSK Demodulator: Coherent Detector.....	52
2.7.6.3	BFSK Demodulator: Noncoherent Detector.....	53
2.7.7	Minimum Shift Keying—MSK.....	53
2.7.7.1	MSK Modulator	54
2.7.7.2	MSK Demodulator.....	55
2.7.8	M-ary QAM—Quadrature Amplitude Modulation.....	55
2.7.9	OFDM—Orthogonal Frequency Multiplexing	55
2.7.10	Direct Sequence Spread Spectrum Modulation.....	56
2.7.10.1	Direct Sequence Spread Spectrum Modulation/Demodulation	57
2.7.11	Frequency Hopping Spread Spectrum Modulation/Demodulation	58
2.8	Summary	60
	References.....	60
3	Typical System Performance Parameters	61
3.1	Transmitter	61
3.1.1	Modulation Accuracy	61
3.1.2	Adjacent and Alternate Channel Power.....	62

3.2	Receiver.....	63
3.2.1	Sensitivity.....	63
3.2.2	Noise Figure.....	63
3.2.3	Selectivity.....	64
3.2.4	Image Rejection (IR).....	65
3.2.5	Dynamic Range.....	65
3.2.6	Spurious Free Dynamic Range (SFDR).....	65
3.3	System Components.....	66
3.3.1	Transmission Lines.....	66
3.3.2	Amplifiers.....	67
3.3.2.1	Gain Compression and Desensitization.....	67
3.3.2.2	Crossmodulation.....	69
3.3.2.3	Intermodulation.....	69
3.3.2.4	Memoryless Bandpass Nonlinearities.....	70
3.3.3	Mixers.....	70
3.3.4	Filters.....	75
3.3.5	Oscillators.....	75
3.3.5.1	Amplitude Noise.....	75
3.3.5.2	Phase Noise of a Local Oscillator.....	77
3.3.6	Frequency Multipliers.....	78
3.4	Summary.....	80
	References.....	80
4	Radio Channel Fundamentals and Antennas.....	81
4.1	Wireless Radio Channel.....	81
4.1.1	Radio Transmitter and Receiver Block Diagram.....	81
4.1.2	Wave Propagation Phenomena.....	83
4.1.3	Multi-Path Propagation.....	84
4.1.3.1	Free Space Propagation Model.....	84
4.1.3.2	Reflection Models.....	88
4.1.3.3	Diffraction Models.....	91
4.1.3.4	Scattering Models.....	95
4.1.3.5	Refraction in the Troposphere.....	100
4.2	Description of Antennas and Their Parameters.....	101
4.3	Summary.....	105
	References.....	106
5	Noise, Nonlinearity and Time Variance.....	107
5.1	Introduction.....	107
5.2	Thermal Noise.....	107
5.2.1	Quantification of Thermal Noise.....	108
5.3	Shot Noise.....	109
5.3.1	Quantification of Shot Noise.....	109
5.4	Noise Bandwidth.....	110
5.4.1	Signal-to-Noise Ratio.....	111
5.4.2	Available Noise Power.....	111

5.5	Noise Figure.....	112
5.5.1	Spot Noise Figure	112
5.5.2	Noise Temperature	113
5.5.3	Effective Noise Temperature of a Network.....	113
5.5.4	Overall Noise Figure of Cascaded Networks.....	114
5.5.5	Mixer Noise Figure	117
5.5.6	Noise Calculation in Baseband	119
5.6	Nonlinearity and Time Variance	121
5.6.1	Gain Compression and Desensitization	122
5.6.2	Crossmodulation	124
5.6.3	Intermodulation	124
5.6.4	Cascaded Nonlinear Stages	125
5.6.4.1	Second-Order Input Intercept Point	125
5.6.4.2	Intermodulation Distortion Formulas.....	126
5.6.4.3	Cascade Second-order Input Intercept Point.....	128
5.6.4.4	Two-tone IIP2	130
5.6.4.5	Single-Tone IIP2.....	130
5.6.4.6	Time-Varying-Envelope Signal IIP2	131
5.6.4.7	Third-Order Input Intercept Point	132
5.6.4.8	Two-Tone IIP3.....	134
5.7	Summary	134
	References	135
6	Sensitivity and Dynamic Range	137
6.1	Introduction.....	137
6.2	Sensitivity.....	139
6.2.1	Minimum Detectable Signal	139
6.2.2	Signal-to-Noise Ratio.....	141
6.2.3	1-dB Compression Point	142
6.2.4	Intermodulation Distortion.....	144
6.2.5	Cascaded Receiver Networks.....	148
6.3	Dynamic Range.....	149
6.3.1	Receiver Blocking.....	150
6.3.2	Spur-Free Dynamic Range.....	151
6.4	Summary	154
	References.....	154
7	Transceiver Architectures.....	155
7.1	Introduction.....	155
7.2	Transmitter Architectures: Heterodyne	156
7.3	Transmitter Architectures: Homodyne	158
7.3.1	Homodyne Transmitter Architecture Drawbacks.....	159
7.3.1.1	LO Disturbance and Its Corrections.....	159
7.4	Receiver Architectures: Heterodyne	163
7.5	Super-Heterodyne Receiver—Dual IF Topology.....	166
7.6	Homodyne (Zero IF/Direct-Conversion) Receiver	167
7.6.1	Homodyne Receiver—Drawbacks.....	169

7.6.1.1	DC Offsets.....	169
7.6.1.1.1	Offset Cancellation Approaches.....	169
7.6.1.2	I/Q Mismatch	170
7.7	Transmitter Leakage.....	171
7.8	Receiver Architectures—Image-Reject	172
7.8.1	Hartley Architecture	172
7.8.1.1	Hartley Architecture—Drawbacks.....	174
7.8.2	Weaver Architecture	176
7.8.3	Digital-IF Receiver.....	176
7.8.4	Sampling IF Receiver.....	179
7.9	Oscillators—Phase Noise, Oscillator Pulling and Pushing.....	180
7.9.1	Phase Noise.....	181
7.9.2	Jitter and Random Jitter	182
7.9.3	Analysis of Phase Noise.....	183
7.9.3.1	Mathematical Treatment.....	184
7.9.3.2	Phase Noise Mechanisms: Phenomenology.....	186
7.9.3.3	Quantification of FM noise mechanism.....	188
7.9.4	Oscillator Pulling and Pushing.....	189
7.9.5	Oscillator Pulling	189
7.9.6	Oscillator Pushing.....	191
7.9.7	Manifestations/Effects of Phase Noise.....	192
7.10	Summary	192
	References.....	192
8	Case Studies.....	193
8.1	Introduction.....	193
8.2	WCDMA Receiver.....	193
8.3	WCDMA Receiver Analog Systems Requirements.....	194
8.4	WCDMA System Performance Requirements.....	195
8.5	WCDMA Receiver System Operating Conditions.....	197
8.5.1	Transmitter Leakage at LNA input.....	197
8.5.2	Duplexer Filter Frequency Response	198
8.5.3	Required E_s/N_0 and Receiver Implementation Loss.....	199
8.5.4	Receiver Noise	199
8.5.5	Third-Order Linearity.....	200
8.5.6	Second-Order Linearity.....	200
8.5.7	Input 1-dB Compression	201
8.5.8	LO–RF Leakage.....	202
8.6	LTE (Long Term Evolution) Receiver (4G).....	203
8.7	Study of LTE Receiver Front-End	203
8.8	Summary	207
	References.....	207
9	Tutorials	209
9.1	Tutorial 1: Introduction to SystemVue and Basic Receiver Design.....	209
9.1.1	Learning Objective.....	209
9.1.2	Prerequisites for this Tutorial.....	210

9.1.3	Design Task	210
9.1.4	Getting Started and Schematic Window	210
9.1.5	Implementation of Basic Receiver Model.....	211
9.1.6	Setting of Component Parameters.....	211
9.1.7	Add RF System Analysis and Execute Simulation	212
9.1.8	Visualization of Simulation Results	213
9.1.9	Additional Exercises.....	216
9.2	Tutorial 2: Direct Conversion Receiver Design.....	216
9.2.1	Learning Objective.....	216
9.2.2	Prerequisites	216
9.2.3	Design Task	216
9.2.4	Implementation of Direct Down Conversion.....	217
9.2.5	First Simulation and Analysis of Results	217
9.2.6	Optimized Implementation.....	219
9.3	Tutorial 3: Heterodyne Receiver Design.....	220
9.3.1	Learning Objective.....	220
9.3.2	Prerequisites	220
9.3.3	Design Task	222
9.3.4	Implementation of an Additional Conversion Stage	222
9.3.5	Optimization of the Design	223
9.3.6	Comparison of Direct Down-Conversion and Heterodyne Receiver	226
9.4	Tutorial 4: PSK Transmitter Design and Complete RF Transmission Link.....	227
9.4.1	Learning Objective.....	227
9.4.2	Prerequisites	227
9.4.3	Design Task	227
9.4.4	SystemVue Data Flow environment.....	227
9.4.5	Implementation of Direct Up Conversion.....	228
9.4.6	Transmitter Simulation and Analysis of Results	230
9.4.7	Receiver Integration	231
9.4.8	Signal Recovery Analysis	233
9.4.9	Bit Error Rate Simulation.....	235
9.5	Tutorial 5: FMCW Radar	238
9.5.1	Learning Objective.....	238
9.5.2	Prerequisites	238
9.5.3	Design Task	238
9.5.4	Implementation of FMCW Radar	238
9.5.5	Target Simulation and Recognition.....	242
9.5.6	Signal to Noise Ratio Analysis.....	242
9.6	Summary	243
Appendix		245
