Part I Theoretical Framework: The Management of Risks Related to Operation and Maintenance Objectives in Architectural Design	
1 The Risks of Decisions with Long-Term Impacts Within the Building Process. The Uncertainty in Design Over a Set of Objectives for the Operation and Maintenance Phase	3
1.1 Uncertainty Over a Framework of Objectives in Architectural Design: The Risks of Failure in Goals Achievement.	4
1.2 Brief, Design and Operation-Management Phases. Relations Between Design Choices and Quality Over the Building’s Lifetime.	7
1.3 Learning by Using. The Role of Feedback Information to Improve the Effectiveness of Brief and Design in Managing the Risks Over the Long Term	9
References	11
2 Uncertainty, Risk and Risk Management.	13
2.1 Certainty, Uncertainty and Risk	13
2.2 Risk Management Process and Current Contexts Where It Is Used to Reduce Uncertainty	15
2.3 Risk Assessment Techniques: Scope and Types.	18
2.4 Predictive Risk Management and Risk Management Through Process Monitoring and Responding. The Control of Uncertainty in the Built Environment	19
References	22
3 Risk Management Through Process Monitoring: Reducing Uncertainty and Improving Risk Assessment Effectiveness Through Knowledge Gathering Over Time	25
3.1 Monitoring and Reviewing: Risk Assessment Updating Over Time	25

3.2	Monitoring Techniques for Building Performances	27
3.3	Real-Time Monitoring and Responding.	30
	References	33

Part II Methodological Experimentation: Proposal of a Dashboard for Risk Management in Design Through a Predictive Approach

4	Risks Over Objectiveness in Building Process	37
4.1	Risks Over Objectives in Building Process: From Brief and Design to Operation and Maintenance	37
4.2	Proposal of Dashboard Based on Tools and Procedures to Identify, Assess and Evaluate the Risks Over Objectives.	41
4.3	Tool to Evaluate the Maintainability of Elements.	45
4.4	A Set of Spreadsheets, to Evaluate the Uncertainty of Maintainability for All Technological Requirements of Each Given Typological Configuration of Technical Elements.	49
	References	54
5	A Dashboard for Design Risk Management. Proposal for a Risk-Based Design Support and Lifelong Feedback Gathering System.	57
5.1	Risk-Based Design Support and Lifelong Monitoring Tool: Framework	57
5.1.1	Risk Assessment and Treatment	58
5.1.2	Risk Reviewing Through Feedback Information	58
5.2	Risk Assessment: A Risk-Based Design Support	59
5.2.1	Risk Identification	60
5.2.2	Risk Analysis	60
5.2.3	Procedure for Estimate the Uncertainty Around Technical Requirements	61
5.2.4	Evaluation of the Maintainability of the Element.	63
5.2.5	Comparison Between Maintainability Require from Technological Requirements and the Actual Maintainability of Elements	64
5.2.6	Estimation of the Uncertainty Around the Ability of an Element to Keep the Satisfaction of Its Technological Requirements Over Time.	65
5.2.7	Procedure for Estimate the Uncertainty Around User Requirements.	68
5.2.8	Identification of All Elements, and Relative Technological Requirements, Involved with a User Requirement	69

5.2.9	Definition of Conditions to Run the Monte Carlo Simulation	70
5.2.10	Estimation of the Level of Uncertainty Around the User Requirement Through Simulations	72
5.2.11	Risk Evaluations and Treatment	72
5.3	Risk Reviewing Through Feedback Information: Proposal of a Method to Gather Real Time Information for Correcting Previsions and Improving Future Design.	74
 Part III Applications: Tests on Case Studies		
6	Application of the Dashboard for Risk Management: The Case Study of Two Buildings of Worship	79
6.1	The Objectives of the Italian Council of Bishops for the Buildings of Worship.	79
6.2	Case Studies: Criteria of Selection and Application of the Dashboard for Risk Management	81
6.2.1	Church 1	83
6.2.2	Church 2	86
6.3	Results of Applications.	90
	References	94
7	Conclusions	97

Risk Management in Architectural Design
Control of Uncertainty over Building Use and
Maintenance
