

Contents

1	An Overview of Astroparticle Physics	1
1.1	Introduction	1
1.1.1	Astrophysics and Astroparticle Physics	3
1.1.2	Discoveries and Experiments Not Covered in This Book	6
1.2	Cosmic Rays	7
1.3	Gamma-Rays of GeV and TeV Energies	10
1.4	Neutrino Astrophysics	11
1.5	The Dark Universe	15
1.6	Laboratories and Detectors for Astroparticle Physics	16
1.6.1	Space Experiments	16
1.6.2	Experiments in the Atmosphere	17
1.6.3	Ground-Based Experiments	18
1.7	Underground Laboratories for Rare Events	18
	References	21
2	The Cosmic Rays and Our Galaxy	23
2.1	The Discovery of Cosmic Rays	23
2.2	Cosmic Rays and the Early Days of Particle Physics	26
2.3	The Discovery of the Positron and Particle Detectors	27
2.3.1	The Motion in a Magnetic Field and the Particle Rigidity	27
2.3.2	The Identification of the Positron	29
2.4	A Toy Telescope for Primary Cosmic Rays	32
2.5	Differential and Integral Flux	34
2.6	The Energy Spectrum of Primary Cosmic Rays	37
2.7	The Physical Properties of the Galaxy	40
2.7.1	The Galactic Magnetic Field	42
2.7.2	The Interstellar Matter Distribution	44
2.8	Low-Energy Cosmic Rays from the Sun	45
2.9	The Effect of the Geomagnetic Field	47

2.10	Number and Energy Density of the Cosmic Rays	50
2.11	Energy Considerations on Cosmic Ray Sources	52
	References.	53
3	Direct Cosmic Rays Detection: Protons, Nuclei, Electrons and Antimatter.	55
3.1	Generalities on Direct Measurements.	56
3.2	The Calorimetric Technique	57
3.2.1	Hadronic Interaction Length and Mean Free Path	58
3.2.2	The Electromagnetic Radiation Length	59
3.2.3	Hadronic Interaction Length and Mean Free Path in the Atmosphere.	60
3.3	Balloon Experiments	61
3.4	Satellite Experiments	64
3.4.1	The IMP Experiments	64
3.4.2	The PAMELA Experiment.	66
3.5	The AMS-02 Experiment on the International Space Station.	67
3.6	Abundances of Elements in the Solar System and in CRs	70
3.6.1	Cosmic Abundances of Elements	73
3.7	Energy Spectrum of CR Protons and Nuclei.	76
3.8	Antimatter in Our Galaxy	78
3.9	Electrons and Positrons	80
3.9.1	The Positron Component	82
3.9.2	Considerations on the e^+ , e^- Components	84
	References.	85
4	Indirect Cosmic Rays Detection: Particle Showers in the Atmosphere	87
4.1	Introduction and Historical Information	88
4.2	The Structure of the Atmosphere	89
4.3	The Electromagnetic (EM) Cascade.	92
4.3.1	Heitler's Model of EM Showers	93
4.3.2	Analytic Solutions.	95
4.4	Showers Initiated by Protons and Nuclei	99
4.4.1	The Muon Component in a Proton-Initiated Cascade.	102
4.4.2	The EM Component in a Proton-Initiated Cascade	103
4.4.3	Depth of the Shower Maximum for a Proton Shower	106
4.4.4	Showers Induced by Nuclei: The Superposition Model	107
4.5	The Monte Carlo Simulations of Showers	110
4.6	Detectors of Extensive Air Showers at the Energy of the Knee	112

4.6.1	A Toy Example of an EAS Array	113
4.6.2	Some EAS Experiments.	116
4.6.3	Cherenkov Light Produced by EAS Showers	118
4.7	The Time Profile of Cascades	120
4.8	The Arrival Direction of CRs as Measured with EAS Arrays	121
4.9	The CR Flux Measured with EAS Arrays	124
4.10	Mass Composition of CRs Around the Knee	126
4.10.1	The N_e Versus N_μ Method.	127
4.10.2	Depth of the Shower Maximum	128
	References.	130
5	Diffusion of Cosmic Rays in the Galaxy	133
5.1	The Overabundance of Li, Be, and B in CRs	134
5.1.1	Production of Li, Be, and B During Propagation.	135
5.2	Dating of Cosmic Rays with Radioactive Nuclei.	139
5.2.1	Unstable Secondary-to-Primary Ratios.	141
5.3	The Diffusion-Loss Equation	142
5.3.1	The Diffusion Equation with Nuclear Spallation	145
5.3.2	Numerical Estimate of the Diffusion Coefficient D	146
5.4	The Leaky box Model and its Evolutions.	147
5.5	Energy-Dependence of the Escape Time τ_{esc}	149
5.6	Energy Spectrum of Cosmic Rays at the Sources	151
5.7	Anisotropies due to the Diffusion	152
5.7.1	The Compton–Getting Effect	155
5.8	The Electron Energy Spectrum at the Sources	155
5.8.1	Synchrotron Radiation	156
5.8.2	Measured Energy Spectrum of Electrons	160
5.8.3	Average Distance of Accelerators of Electrons	161
	References.	162
6	Acceleration Mechanisms and Galactic Cosmic Ray Sources.	165
6.1	Second- and First-Order Fermi Acceleration Mechanisms.	166
6.1.1	Magnetic Mirrors	167
6.1.2	The Second-Order Fermi Acceleration Mechanism	169
6.1.3	The First-Order Fermi Acceleration Mechanism	171
6.1.4	The Power-Law Energy Spectrum from the Fermi Model	174
6.2	Diffusive Shock Acceleration in Strong Shock Waves	174
6.2.1	Supernova Explosions and Cosmic Rays Acceleration	176
6.2.2	Relevant Quantities in a Supernova Explosion	177
6.3	Maximum Energy Attainable in the Supernova Model	180
6.4	The Spectral Index of the Energy Spectrum	182

6.4.1	The Escape Probability	184
6.4.2	A Shock Front in a Mono-Atomic Gas	185
6.5	Success and Limits of the Standard Model of Cosmic Ray Acceleration	188
6.6	White Dwarfs and Neutron Stars.	190
6.6.1	White Dwarfs.	191
6.6.2	Neutron Stars and Pulsars	193
6.7	Possible Galactic Sources of Cosmic Rays Above the Knee	197
6.7.1	A Simple Model Involving Pulsars	198
6.7.2	A Simple Model Involving Binary Systems	199
	References.	200
7	Ultra High Energy Cosmic Rays	203
7.1	The Observational Cosmology and the Universe.	204
7.2	The Large-Scale Structure of the Universe	206
7.3	Anisotropy of UHECRs: The Extragalactic Magnetic Fields	208
7.4	The Quest for Extragalactic Sources of UHECRs	210
7.5	Propagation of UHECRs	215
7.5.1	The Adiabatic Energy Loss	215
7.5.2	The Propagation in the CMB: The GZK Cut-Off	215
7.5.3	e^\pm Pair Production by Protons on the CMB	218
7.5.4	Propagation in the Extragalactic Magnetic Field	219
7.6	The Fluorescence Light and Fluorescence Detectors	220
7.7	UHECR Measurements with a Single Technique.	225
7.7.1	Results from HiRes and AGASA	226
7.8	Large Hybrid Observatories of UHECRs	228
7.9	The Flux of UHECRs	233
7.10	The Chemical Composition of UHECRs	234
7.11	Correlation of UHECRs with Astrophysical Objects	236
7.12	Constraints on Top-Down Models.	238
7.13	Summary and Discussion of the Results	239
